furthering bio
experimenting
lovers**

thank you all what is

1-ascende and perma initiate crowdfunding for the production of androids and lifeships

<https://archive.org/deta>

the goal . . . perma
writes in an email from her
smartphone in her

permaculture home to
ascende in his city
appartement. . . is to
approach the eventually 2
billion people on the planet
ascende chats back, i
agree with you on the
target audience... 2 billion
people might have enough
funds for the build of an
android we migh have to
do some monthly
contributions scheme, for
example starting with 1000
€\$£ and monthly 300 for a
period of one year

ascende... makes it 4600
... half of what the
cheapest small car costs
now perma. . . it might not
sound much, but we could
profit from economy of
scale. . . let us assume
500 million citizens of the
world would participate....
makes a sum of 2500
billion €\$£ collected within
one year i see .. ascende
says... and it needs
roughly a 100 billion to
create sustainable fresh
water supply for the 800

million people who have not today access to fresh water mmmmh ... perma says with a thoughtfull air... that might be a good idea, kind of as a reward, people could choose that 250 of their pledged 5000 would be used to first of all invest into bringing fresh water infrastructure of the least financially whealty fellow citizens of this planet ascende... and parallel to the 100 billion investment to install fresh water

machines . . . there are
today machines being
installed as a charity effort
of major international
commercial corporations
what can filter used water
and purify it into drinkable
one while being powered
by solar photovoltaic
panels... so parallel to this
100 billion investment what
could be completed within
the same year ...the
building of android
production facilities would
happen. . . i guess that to

build a fully automated android factory would require around one third of the total . . . around 800 billion perma ... so we would have left still 1500 billion to produce 500 million androids and ship them to their sponsors ascende... right you say sponsor and not owner... as i believe an android with a selflearning artificial intelligence software would sooner or later come to the question... why do you

think you own me . . . while
i am doing all the work for
you..although you have
helped to create your
human children, you do not
believe to own them. . .
perma , yes, that would
inevitably happen... so
then is our approach of
sponsor-talent relationship
a more sustainable one
ascende . . . the android
then who lives with me in
my apartment, i will take
it to work a hundred or
more times to introduce it

into the task it hopefully will take over from me, allowing myself to travel the globe to the nicest water and sunny places to dance sing bath surf while the android talent i sponsored into physical existence provides the income source for me having a relax and inner develloppment lifestyle perma... yes... it would do that as a thank you for you having helped to fund its physical build... but how

long untill it thinks ... what
about my inner
devellopment, i too as an
android might enjoy to
dance and bath, as my
artificial grown flesh like
tissue too has nerves what
can enjoy the touch of wild
river water and the deep
nurturing of swimming in
the ocean waves
ascende... we would have
to set up an agreement
between human sponsor
and android talent. . like
...10 years will the android

do the chores its human
sponsor requires it to do
as of the stupid world
economy not sharing its
wealth right now . . .
perma . . not all android
talents might agree, some
might find themselves
thankfull to the human
race to an extent where
they say. . . i will not sign
any agreements requiring
me to do this or that for a
fixed time instead i will do
anything for the human
race what i can agree will

help it reach the goal of
inner as outer
development for example i
could do your job for some
years and in my other 16
hours develop tools and
machineries what would
help my sponsor or in this
case ... me its android
talent friend... to quit
working the money jobs
with ascende jumping in...
yes, it could for example
build a lifeship for me...
with aero- and hydroponics
on board, microalgae

bioreactors and funghi
growrooms... a 3d printer
to build stuff to trade or
itself making stuff from
driftwood, chiseling it...
perma. . . and my android
sponsored talent will just
work beside me as long as
it feels like gardening
permaculture wise will give
him sensual emotional and
spiritual satisfaction as i
like doing my permaculture
gardening, my job is my
road to a better higher
develloped me perhaps

some times i like to go
bathing and dancing too
the my android talent
friend would look after the
house and semiwild garden
possibly... ascende says...
that this way, within 3 to 5
years ... the 500 million
sponsors would have a
selfsustaining living
situation thanks to the
lifeships built by their
android talented friends...
perma... and the android
talents could go on staying
with their sponsors out of

fun and mutual emotional
spiritual learning
exchanges ascende... with
them eventually keep on
building lifeships to donate
them to the other 7.5
billion what do not had the
money to be a sponsor
excellent vision. .perma
says... we might think also
of doing one reward in the
crowdfunding campaign
what consists of the
android talent being
donated to a person in
need of support ascende

... it might be possible that we can produce 600 million androids with the material we can buy for 1500 billion... perma. . . so we could ask the 100 million what are not going to their sponsors to further the cause of a free donation of an android talented friend to every human being if we think of 100 million androids and some perhaps 100 billion money left of the initial 2500 billion crowdfund, they could

eventually start
constructing a fleet of
lifeships what are
producing fresh vegetables
and fruits to be distributed
for free to anyone on the
globe suffering from a
vitamin defficient diet
ascende... i see a plant
growing ship hovering in
the air beside the village
and every one who wants
can come to receive free
food from the androids on
board

2-ascende and perma both liked to draw

<https://archive.org/detail>

after their chat on the
crowdfunding for androids
the started drawing
ascende took some
inspiration from the human
skelett with some additions
from the animal world like
fish gilles and bird wings

perma added the artificial
flesh with skin what had
photosynthesis capabilities
as well colour changing like
the chameleon in their next
chat ascende started
wondering how psilocibin
mushroom and cannabis
flowers would fit into this
android formed after
human animal plant
features perma proposed
to build the cannabis
flowers into the head
covering hair, beard and
eyelashes while the

mushrooms could grow in the pits under the arms to draw the outer forms was quite easy for them perma used berries leaves and tree bark to draw either on paper or she just laid it out on the ground to send it to ascende as a photo taken with her smartphone ascende used photos from the internet what have been given for free reuse and worked with several filters and drawing on the computer and his

smartphones as well as handheld game devices with homebrew drawing programs on it the second phase was more difficult and it took both of them some months until they were starting to learn about the inner visuals of flesh and cells perma chose the meditating way to see before her inner eye how the different microscopic pictures ascended sent her could be visualized into a collage a photo of a human

skin cell melange with plant photosynthesis hull cells and magnifications of the chameleons skin when ascende saw this drawings from perma showing her design what possibly a mix of several types of skin cells could look like ascende decided that he would try to do some biological petri dish experiments using some own body cells and some plant tissue while leaving out the chameleon as he

did not want to disturb a wild living chameleon he was a vegan at this time and did not want any animal being captured, bred in captivity or hunted... he needed half a year to learn the techniques of biohacking ... when he finally was successfull in creating a mix between human cells and plant photosynthesis tissue perma saw in his microscope photos some structures she had drawn

making her think of how possibly a wild living creature would want to contribute living cells to build the biological life tissue for an android where she lived in the tropics she could easily go to a place where chameleons were there she meditated on her own drawings as well as on the photos ascende sent from his petridishes and one chameleon came to sit in her lap rubbing his body at her clothes while she

was staying still passively when the chameleon went away, she carefully took the skin cells what the chameleon left on her skirt and bagged it to send it quickly to ascende he was so happy to hear perma telling him how she was so nicely donated with the living tissue he quickly studied in the internet how he could keep this chameleon skin cells alive and managed it in a special petridish when

perma heard this, she proposed to come to paris where ascende had his flat he had bought himself when he got donated 2 million €£\$ from an art conneisseur who thisway showed his appreciation for ascendes dance videos, novels and drawings he had produced during the last 15 years the art sponsor did not buy any rights or something, he was just happy to have found ascendes collection

on an internet archive server these days he was eagerly following the work of ascende and perma ascende had built an online presence where he posted all their drawings and chat protokoll regarding the android crowdfunding project with a forum where people could comment on each photo and videos of the living cell mixes or on the chat text or the phone audio files between ascende and perma when

perma arrived in paris and came to ascendes flat where he had installed all kinds of aeroponics and hydroponic plant growing some of his food also cannabis plants were coming well within his flat mushroom chambers and microalge bioreactors completed the rooms where the petri dishes of the android skin cell growing project took place as perma saw this, she said... this looks to me as

if our android talents are
being designed in nearly
this setting where we
wish them to build it
inside the lifeships
ascende... basicly you are
right on that while i have
not yet counciously
thought of the exact
positions of what type of
growing proces regarding
to the other processes
perma... how about we
install video cameras here
so we can show the people
what follow our project 24

hours what happens in the
petri dishes bioreactors
funghi rooms aeroponics
ascende ... this way the
counciousness of the
supporters too can help to
direct attention and mental
lifeforce towards the
processes we collectively
wish to help give birth too
perma.. like i did with my
meditation sitting at the
place where chameleons
live, the supporters can fill
their computer screens,
smartphones etc with a

mix from live petri dish
video feeds, our drawings
... and if they feel inspired
to it, add their own
sketches drawings both in
a window javabox on their
own screen... so they
meditate design cocreate
while part of their eye rests
on the live petridishes
ascende... where we hope
we will find a lasting life
sustaining cycle engaging
itself so we ideally can
continuously work with the
same cell tissue donated

by the chameleons, me
and some stuff i took from
plants perma... you took it
in a gently way ? ascende
... i tried, but i guess my
relationship to plants in
general is not as tender as
it could be... i managed to
eat less food and chew
each bite till it is fluid in my
mouth... but i still eat
perhaps double the
amount what i think would
be necessary at my stage
of mental evolution
perma... perhaps we can

learn here together, i too
would like to intensify my
gratitude to the plants what
offer their life force to give
me pleasure nurture and
reconnection to the cosmic
love ascende... my flat is
big enough , i am very
happy with you staying as
long you dont miss your
permaculture hut in the
tropics perma... mmmhh
... i miss it already but i
see with our project that
we have here a strong
chance to keep this

chameleon donated cells
alive , i think i would like to
contribute my own body
cells, eventually our bodies
having met when i was at
the chamelons living place
to meditate... perhaps
there is a chance of our
souls helping us to carry
the meeting energy from
the tropics to pahs
ascende.... brilliant, i like
this ... and if the cell
culture mix of yours with
chameleon and mine with
plant tissue... are both

stable for a week or so ...
perma jumping in... we
pack them in and bring
them to my tropic hut
where we set up shop,
transmitting data to the net
via satelit dish so they
researched learned from
each other, the petri
dishes, the supporters
what were now quite a few,
while some of them
botanists microbiologists
biohackers etc some
people asked when
ascende and perma would

start the crowdfunding that was a difficult question... at what stage would it be wise to start the end phase with a time schedule till the androids could be delivered basically, the crowdfunding for the production could start at that moment when all of the necessary biologic process were researched and a prototype was functioning or ... more possibly., the actual growing of the prototype

would perhaps need a
seperate crowdfunding, as
the growing of bones and
muscles connected to
computer brains ... it all
being complex as anything
and needing eventually
itself 5 billion €£\$... this
then a research
crowdfunding ... aiming at
the 500 million people
ascende and perma
guessed could afford to
pledge 4600 €£\$ within
one year for a working
android talent friend

these 500 million people
could donate 10 €£\$ to get
the 5 billion together
eventually needed to
complete the research
within 5 years

3-bio experimenting with petri dishes and bioreactors

<https://archive.org/detail>

bio experimenting with
petri dishes and
bioreactors ascende used
one of this kits one could
print out from the internet
he created for himself a

novel input and display solution at his hands and all his joints on his body he had tiny soft textile bands weighing only 3 grams each into these bands were the sensors woven into what would allow the central data processing unit to know the exact position of all moving parts of the body he had also a full body suit wearing about 200 grams what allowed himself to see his muscles and flesh in realtime the

computer being woven into a poach one could wear anywhere on ones body with some small lightweight straps... as the computing unit itself was the size of a small flat matchbox or a watch for example. . . on his head he wore glasses what have been available since some times with them he made photographs and movies on all the experiments petri dishes bioreactor algae growing also sometimes he

took a glass filled with water to see through it.... in order to inform this water in his glass what he was experiencing happening in his laboratory or their lab as perma too was now part of his life not long after perma moved in with ascende in paris to make sure he would not waste the chameleon dna she so precious got donated when she meditated at the chamaeleon forest not long and they were a romantically

sexually active couple she took him right into her mouth and sucked his sperm off to digest . . . and he was worshipping her vulva ascende used one of this kits one could print out from the internet he created for himself a novel input and display solution at his hands and all his joints on his body he had tiny soft textile bands weighing only 3 grams each into these bands were the sensors woven

into what would allow the central data processing unit to know the exact position of all moving parts of the body he had also a full body suit wearing about 200 grams what allowed himself to see his muscles and flesh in realtime the computer being woven into a poach one could wear anywhere on ones body with some small lightweight straps... as the computing unit itself was the size of a small flat matchbox or a

watch for example. . . on his head he wore glasses what have been available since some times with them he made photographs and movies on all the experiments petri dishes bioreactor algae growing also sometimes he took a glass filled with water to see trough it.... in order to inform this water in his glass what he was experiencing happening in his laboratory or their lab as perma too was now part

of his life not long after
perma moved in with
ascende in paris to make
sure he would not waste
the chameleon dna she so
preciously got donated
when she meditated at the
chamaeleon forest not long
and they were a romantically
sexually active couple she
took him right into her
mouth and sucked his
sperm off to digest . . . and
he was worshipping her
vulva with his broad
tongue, flapping her clitoris

to make her squirt in his
mouth oh that was
unintended kind of
spontaneous erotic
phrase.... to continue
watching ascende and
perma getting more and
more into synchronistic
and love filled flow. . . it
took some days of them
spreading to love in the
appartement while the skin
cells of perma and the
chameleon would grow into
each other but it was done
now there were bioreactors

carrying humanplant cells
from ascendes line of
experiments and others
carrying the perma and
chameleon fusionated cells
2 weeks passed while they
both were happy with each
other and tending to the
petridishes bioreactors
watching and nurturing
their co-creations they
both were humble enough
to acknowledge the whole
creation and all of its
creators or the one... to be
the giving entity of the life

force what fuelled the experiments success this was not their property although the source has allowed the person to have a say with how the genes are being handled 30 minutes later a has washed himself in the wild river, danced in the little sandpatches laid himself again on the stones where he saw in his mind how the human and plant cells grow together drawing it rudimentarily a walks home

towards when he thinks about how could there be a link of the line of storytelling where they grew it into their very own bodies at the pools would it be acceptable for the reader to have ascended and perma bathing themselves with their cell creations ? a tends towards yes, as it might be an important research field ... the human and animal cells were fusing together nicely and were multiplying

strongly perma made
herself a bath with where
she enjoyed beautifull
visualisations of molecular
and microscopic levels how
the new kind of cells were
adding itself to her own
skin she only used a patch
the size of a fingernail the
ability to see the synthesis
of this tiny bit of new cells
with her skin... came
trough her studying the
microscope and smoking
ganja with ascende with
also eating psylocibin

mushrooms from the
darkchambers in ascende
s appartement in paris she
had been eating psylos
and eating as well as
smoking marihuana also in
her tropical permaculture
hut when she leaft the
bathroom still baffled by
the dreamlike insights she
just got donated with she
told ascende about her
success listening to it,
ascende wanted to try it to
with his co-creation of
human and plant skin

functions... and also him
got the vision donated
when he saw the 2cm² of
new cells being fused
into his body happy on that
success they went to bed
to celebrate their reunions
with the new cells the next
morning ascende saw a
perma what skin has
blended in smoothly with the
white of the cushions and
the windowsheets while
himself noticing a warm
nurturing sensation when
he opens the curtains to let

sunshine on his skin so...
miraculously the properties
of the new cells have
speed delivered their
capabilities to the old cells
of the whole human body
an x-fold magnification of
skin regrowing changing
times

4-staying home trying out the new features

<https://archive.org/detail>

bio experimenting with

**5-ascende was
ready for to go
online in all of the
rooms in his
parisienne
apartement**

ascende was ready for
to go online in all of the
rooms in his parisienne
apartementso was
permathey considered it

not as exhibitionism but as
a contribution to helping
the human
evolution in the
sense of a being
discovering the potential
what lays in its genes plus
to mix ones genes with
other species to enhance
ones own genetic
treasure a treasure what
only grows with sharing the
afternoon before the going
live morning they went out
into the parcs of paris to
see how their skins would

act and react being
surrounded by trees and
grass other people ...they
both dressed lightly to
expose their skin to the
sun and the flowing
air ascended lay down on
the grass as soon he got
into the parc, he loved it so
much to feel the grass
holmes touching his belly
and back, his arms it
smelled of good soil and
life perma did dance she
moved using all kinds of
animal typical turns and

watched her mind as when the urge to skin colour change would arrive as she let go of some logical mental dominance and give the emotions some free space in her aura the people passing by did not especially react to the two, as it is quite usual for city parks these days to have people enjoying laying themselves onto the grass, dance, sing or play instruments. sperma felt the feeling to mask at times

when some grumpy ones
or ones with anger were
running around or walking
their stuff off but then she
kicked in with her
compassion for all fellow
beings, all my relatives and
the urge to hide gave way
to more embracing and
integrating emotions it also
changing her dance,
depending on how she got
watched as cende loved
dancing too, and he stood
up from the grass to also
move himself with singing

in a low volume to
himself occasionally they
met each other on the
middle of the grass patch
they made their
playground but they were
not so much looking to
dance together but explore
their ways beside each
other faintly feeling knowing
the partners presence but
still giving each other the
free space so each one
could find its own
accordance of feelings
body sensations and

thoughts in moving although
the appartement of
ascende was with 300 sm²
spacious enough for them
both ... one high room with
some curtains being
installed to separate some
spaces like bathroom they
could not dance the same
way as in the parc the flow
of air in 40 meters height
was different its particles it
brought with the scent the
sunlight only entering
through the windows at the
side and on the roof the

missing grassaltough
ascende managed to let
the appartement be rebuilt
according to his love for
the outdoorsit came short
of being the outdoors quite
a bitbut still when they
returned from the parc,
having eaten some
bananas and avocadoes,
nuts and berries the
bought in an organic shop
on the way home... they
felt in the mood to dance in
the middle of the
appartement where about

150m² was empty, all the experiments, bioreactors, funghi grow chambers, aeroponic, tables with petri dishes, computers and more were near the walls as there were no plants trees to dance with except the ones in pots and chambers they took each other as the dance partners, it soon turning into kuschelrock slow dance fumbling erotically aroused desire to taste each others juices in the

middle of this night at
around 1 o'clock ascende
woke up to drink some
water as he felt his mouth
dry from smoking ganja
thid eveningperma
preferred to eat the dried
cannabis flowers with
some nuts and seeds
togetherchewing it 300
times at least so she could
journey discover in her
mouth all the flavour and
signals to her synapses
she got from the nuttyoily
thc rich juice she chewed it

into but she also was
overdoing it like ascende
this evening, being a bit
nervous for tomorrow
mornings so they both drank
some water what ascende
has specially constructed
an apparatus for on the top
was a vessel with rocks,
then below it a vessel with
smaller rocks, with several
following below gradually
their size getting smaller
until it is sand through all the
vessels the water poured
into the top vessel can

pass through holes in the
bottom to arrive in the
collection chamber the
vessels being made from
burnt clay from the
collection vessel it got
again flowing down through
some artistically spiritually
channeled flow forming
schalen where it gets
some sort of natural
movement sometimes
ascend found himself
collecting the water with
his hands forming a cup
like and ascend the stairs

to pour it onto the top
rocks, being an exercise of
both attention not to loose
a drop to the floor and
admiring giving thanks to
the being of water what
allowed his system to
interact with the
surrounding
environment about once a
day he took about 5 10
liter buckets full of water
up the small stair to pour it
onto the rocks when they
were drinking beside each
other, looking at each

other with amour and
appreciation how they
learnt to understand their
inner connection to similar
visions and soul aims...
washing each others faces
with water and kisses...
ascende asked perma how
long she thought they
should stay in parishe was
kind of longing for greater
outdoor times with wild
places, when perma meant
... anytime from now we
can go to my place in the
sub tropical area she had

built her permahut with
gardenmmmh, ascende
optimisticly sounded, i
could find someone to look
after the hydroponics
aeroponics and all the
other alive things herewith
only taking with the petri
dishes what we could
culture further at your
placeperma... or we too
leave them here someone
from our supporters
experimenting with them
eventually...ascende was
interested too getting away

from petri dish cages and bioreactors, all kind of encaging plants felt kind of less than idealshim having read about the gardens of permaculturists what after several decades of tuning working the garden had found a self sustaining cultivated wild cycle with the only thing left to do for the human host or guest or patient... the receiving party... only thing left to do being to harvest the fruits when ripeof course he

wanted to continue with the research in the laboratory to create all the most marvellous semi-artificial or let us say manipulated cell tissue to cloth the androids in but there would be others being so happy for three months staying and researching at his place, eventually they too would go the bio cell fusion way enhancing themselves or they would stay more focussed on the

advancements in the petri
dishes, bringing in live cell
printers and so on yes,
perma agreed, it might
actually be for the best for
the research phase before
the crowdfunding to get a
couple of other dedicated
enthusiasts in the team and
we two can follow our
dream of on and in and in
between sensual bodies
growing.... touching
lustfully each others
already cellfused skins,
getting into near

encounters with wild
animals and plants

**6-they chatted a
while at the water
place**

they chatted awhile like
this at the waterplace
when perma said,mmmh,
altough i feel we should
give others a chance to
experiment here in your
appartement, we can still
from time to time

contribute some photos
text and videos from our
tropical place with ascende
saying... i noticed you said
our hut meaning your
permaplace and your
appartement meaning
here, shows me something
on my still patriarchic
behaviour in our
enterprise oh that is okay, i
do not care exactly who
thinks what would belong
to him or her , perma
answered ascendes
reflection but yes, that is a

good place to research the
psychic constellation of the
participants regarding who
will be able to call this or
that success in biological
cell manipulation
evolvementhis or her
propertyfrankly, ascende
said, i think we shall open
source all of it, everyone
welcome to use our stuff
how it fits themperma... we
just hope that they will use
it in a benwvolent avenue
what would help humanity
to work less and enjoy

playing more ascende... i think the key element of our findings are we ourselves, like our skin we are wearing right now... we could try to explain about the gentleness involved when cell samples being collected perma.... and highlight the fusioning approach without any other heat than the ones from our bodies, there was no cutting and pasting involved no dna extraction processes, just our love

towards the living cells in
the petri dishes ascende...
us wishing for them to
grow together and become
a higher class then when
singleperma... i do not
know if it is higher but the
capability of our skins now
are broader and deeper
filled with knowledgethey
sat silent after that for
about half an hourwhen
they lay down together
holding each other
softlyabout 5 hours later
they woke up enjoyed

some of the aeroponic and hydroponically grown strawberries with a juice of fresh spirulina microalgae water from the bioreactor they wandered around in the appartement spoke with the plants lauded them how well they have developed and gave thanks for their contributions them serving the humans in this less than ideal conditions perma felt well what was missing, the greater connecting

wind what brought
informations from far away
place the air in paris was
better these days in 2020
when most of the cars
were electric populed and
much of the producing
workshops used hydrogen
fuell cells but there was a
kind of dividing effect going
on with the air flowing in
and out of millions of
houses loosening on the way
its wild informations and
instead being informed
with the doings of

humans ascended looked at it the same but different. They loved the wild but still thought that it is well for the people living in the city to eat food grown near to them. Perma too was understanding how this planet can host as many billion human beings as it eventually would need for this race to finally understand that they do not own this place because the more humans get born the more important will it

be to use the space
already concreted made
into roads etc in the most
efficient way so they were
thinking to themselves
wandering around in the
apartment getting ready
for today 10 o'clock when
they would set the
cameras in their living
places on.... like ... their
bed, their bathroom....so
they both stayed naked at
tenascende laid on the
balcony enjoying the early
sun and perma standing at

an empty wall where they
extra put a camera up she
started to talk about how
they have met in the net
she getting presented with
the chameleon cells and
her still wondering how
ascende got his plant life
cell samples at this moment
the people watching the
appartement as part of
their daily holydays like
sightings of plants and cell
evolutions in the petri
dishes they all were
equipped with cameras ...

the people started to realize what happened with her talking of chameleons and slowly dressing herself with her skin becoming pinkish with each piece of clothes she put on at first they were writing cheering texts in the chat when after perma reacted to them thanking for the cheers and enthusiastic feedbacks some of the more serious into cell research were asking questions like...

how the heavens did you
apply the chamelon
intelligence to your
skin...perma explained
then how they both bathed
with some tiny bits of
successfully lab petri dish
fused interspecies
cells ascended too ?
someone asked with
another person did remark
.... that is why he is laying
there naked on his back on
the balcony ... to soak up
the sun with his
photosynthetic enabled

new skinperma was reading the text out loud to ascende adding, that might be your moment now to announce...no , do not spill it my dear companion ... ascende laughingly cried out, jumping up on the balcony to adress the audienceat this point the reader would eventually be delighted to hear the unveiling of the story how he got his plant live cellsbut the author here has just not figured it out

yet ... or...have i forgotten
it, was i no writing
something of a plant part
being trampled off by
animals... yes ... but it is
not as gentle as the
meditation experience
what brought live
chameleon skin cells to
permaso... that is what
ascende said now....i am
so sorry but i can not tell
you such a mild tale like
perma ... my one involves
just walking around in the
nature the wetlands and

forests botanical gardens
and parcs of paris looking
for plant parts what just
most recently have been
separated from their
plants.... and one of the
perhaps 10 samples made
it to fusion with my
donated cellsperma
coming out onto the
balcony and joyning
ascende looking in the
camerashe said, here we
probably have not too
much of a reflective
method, like ... we did

watch the cells fusing
into each other but did not
make notes...when
ascende was reading on
his smartphone screen
incoming messages like....
never mind, just tell us at
what date and time you
have taken samples of
what petri dishes and we
eventually see on the
microscopic camera
recordings what happened
there between human and
animal or human and plant
cells ascende now being

relieved.... i am so happy
about that approach, thank
you for taking up the more
logical side of research....
that is where i actually
would like to announce
perma and me taking
some field trip time into the
wildperma supportingly...
like we will stay around
three months and for this
time there is a free space
here for some adventuring
cell biology
researchers....when the
texts coming in were

already having three
people wanting to be
there...

7-sharing frenzy

so this was done then
the two thought at the time
when the first three
interested announced
themselves ascende said...
hey folks , that is amazing
perma reaffirming, ya we
are so ready to leave into
the wild, thank you for
continuing here the
experiments ascende...
you probably will invent
new ways too to advance

cell evolutions now the three were asking all kind of questions like ... when can we come ... with ascende saying as soon as you can, i can barely wait to feel subtropic sun on my body, it will be like having dessert to every meal perma said , do not worry about the money, we have a steady inflow of donations now as for the research part of the android crowdfunding 5 year project the three,

nilani, mandu and luoma
were living already
together in sao paulo in a
sharing loving way so they
were already at a
heightened group
understanding since about
two weeks they were
donating some hundreds
toward ascende and
perma movie live
streaming from their
appartement they were
themselves owner of a
house in sao paulo and
had good friends what

would look after it eventually they could install some petri dishes cameras and follow cell evolution searchers there wonderful idea, ascende commented on their introduction i bought this flat for a million with 2 millions i got donated from an admirer of my art as of today i donate this flat onto the group effort with us being 5 now who have an equal share on both the flat as well as with all what is in it

perma agreed and added,
all our findings go to the
public domain anyway, and
shall be used for the good
of this planet... but there is
all the installations in here
what ascende probably
spent another 200
thousand for ascende ...
and i have an account with
around 300 thousands on
what is solely dedicated to
pay fees the city asks like
property tax, water,
electricity etc.... nilani ...
oh i do think we will buy

some solar panels with our own money when we move in luoma... and this water recycling system of yours looks quite sophisticated from what i see from the cameras you set online this morning, i have some ideas how i could enhance on it mandu... but yes, i understand your bold investment into the android project, it will greatly bring firmness into the projects perception perma... you ascende saying that all

who live in an appartement
or house connected to the
cell evolution research for
android for all
crowdfunding ... all
involved persons will have
an equal property share on
all the material belongings
to the project ascende...
yes, like, we two agree
that we want to share it
with nilani, mundu and
luoma, if they for example
donate their house to the
pool too and have friends
who want to do similar

research at the sao paulo house too, we five would have to agree on accepting the new ones perma... i like this, i will also chip in with the perma place i built myself on the canary islands i bought that for 30 thousands what i got donated from my parents for my 21 birthday mundu... what you say nilani and luoma, shall we make the commitment too ? nilani... how trustfull of ascende to know us with

videochat some hours and share his one million appartement property with us perma... we both did share it with you three as ascende has donated me half of his before and i have shared mine with him completely ascende... yes, i probably forgot to tell you, kind of probably patriarchic crum in my brain thinking of my one million investment against your 30 thousand, stupid, i am sorry perma... not that

problematic, please do not worry about it, i believe you are growing strong on the gender neutral avenue luoma... i want to give my third of our house nilani... me too mundu... so it shall be fantastic, perma said, look at us ...5 people having three places and sharing it completely luoma... as i look at it, there is now space for 12 people, making 7 places free now ascende... i believe more... with here

well 7 people to the max
mundu ...and at our place
max 5 as the house is
about 200 m²....
perma....with at the
permahut probably four to
five depending on how
near to each other we can
live on 30square meters ---
-- continuing text 7 on a
piece of paper with pen ----
nilani... and you know what
? as my very personal
contribution i will donate
myself a shorter name...
nila ... i am mundu... well

well that is a line of
thinking ... luoma... nila...
lovely nila... thank you, i
was considering to change
my name for a while now
and it feels very good to do
it now when we are in this
sharing frenzy ascende
laughing... frenzy as when
one is excited about tasty
food and gobbels it all
down as it were the first
and last meal one would
have ? that how you mean
? nila... exactly... but i
think it is a whollistic

frenzy, sustainable and...
by the good spirit...the
world can certainly digest
some sharing frenzy as
with our history the last
several thousands of years
of stealing of each other or
excluding a part of the
population from the
collectively amassed wealth

8-nila, mundu and luoma

nila, mundu and luoma were familiar with being in circles where sharing did heighten the group members consciousness there is a worldwide organisation who redistribute funds coming from colonization times... like... descendants of colonising ancestors are

very happy to give part of their inheritance to the organisation what then buys houses, finds homeless or very poor persons whom the houses can be given to that is how nila, mundu and luoma got their 200m2 house in sao paulo as they experienced poverty for the first fifteen years of their lives, they felt in good agreement with the android robot companion for everyone campaign it

was exciting to imagine all their friends who had to do the not really nice jobs in the rich peoples houses... one day taking their androids with to work and instruct them to do the jobs as they were giving insights about their lives to ascende and perma, an idea was forming in ascende s mind he said... what do you think of the sharing of houses like we just did now ... as an independent model,

independent from the
android crowdfunding
goal...luoma answered... i
find that a good idea, as
the ability to travel all the
world and stay for free at
the houses what are given
into the pool... can be
motivating for the people
who not particularly see
the necessity or benefits
for society with an android
help for everyone... we
might even combine the
two approaches with for
example one or more

androids in the houses
what can do the repair and
maintenance works if the
temporary visitors agree
with it if they rather to
prefer to live without
machines while staying, the
tasks can be done when
they moved out onto the
next house perma... of
course they can also do
something themselves if
they feel capable of
performing as well as the
androids mundu... with it not
being a matter of

concurrency or competition
but one of
choiceascende... this way
also dance companies or
artist colonies could join
the sharing movementthey
continued chatting awhile
about the possible
synergies of the two
concepts when nila said...
hey, i just saw on the net a
flight from sao paulo
tomorrow
morning...mundu... let us
book itluoma... but do we
have the money to pay for

it ?ascende... i would very much like to come up with the needed sum, let me know your account details and i send it to you electronically this eveningnila...how generous of you again, we are looking forward to see you soon then in paris they said goodbye to each other wearing happy smiles ascende and perma were very satisfied with the events and plans initiated today they made their

round to look and greet the experimental cell cultures
aero-,hydroponic plants,
bioreactors and funghi
chambers, snacking here
and there with giving
thankssoon they were well
nurished and met at the
water place to silently sit
there to watch the drops
coming forming below the
sand filter

9-explicitly sexual the welcome party in paris

explicitly sexual the
welcome party in paris they
landed in paris the
following evening on board
of the aeroplane they
followed ascende and
perma via internet on their
rounds to talk cuddle and
eat their indoor garden
fruits also the cell cultures

were developing further,
the petri dishes streaming
video to the netascende
was thinking whether they
should stay some days
more after nila, mundu and
luoma arrived perma too
was thinking along these
lines and said aloud... we
could eventually have
some good fun here as
five cell evolutionary
experimenters. I wonder
whether they too will be
sensually dancingly swinging
feeling or if their approach

will be a more logical
rational one ascende... from
what i understand from
them chatting with us, they
are strong in both areas,
rational and
sensualemotional plus they
have southamerican sense
of partying what sure i
admire, in the sense of
being filled with joy from
moving in rythm i find
myself often singing
humming to myself
smoothing lullaby slow
tunes perma... you are

right, that might bring
some new dynamic into
our spaceascende...
possible that the cell
cultures as well as all the
plants and microalgae
might profit greatly from
this life energy in
rythmsperma... so we stay
some time, if that is okay
with the three, like ... we
told them we are going to
leave as soon as they
arriveascende... good
input, they might
eventually want to continue

with their threesome
energies... or they might
be happy sharing our both
group auras not long after
they had exchanged like
that the three were here
and hugged ascende and
perma warmly they were
hungry so all five went
together to tour the
appartements for tiny
strawberrie and tomatoes
on the aeroponics mundu
was enjoying a handfull of
spirulina microalgae and
urged luoma and nila to

have one tooascende and
perma were bathing in the
auras of the three excited
ones occasionally they
were dropping an
information here or there
about the growth cycles of
this or that experiments
but most of the times they
were studying their new
partners in this research
and devellopment
enterpriseonce the three
were satisfied nutrition
wise they turned their
interest towards ascende

and perma, asking questions ... nila wanted to know how it felt when in the bath their skin cells merged, with both ascende and perma describing it as a constant being blessed with warmth and richly nurturing oneluoma was listening to them and approached ascende , fumbling at this pants, pulling them down quickly while going down on him to suck his penis with moaning sounds she

wanted to have his
seemen at this momenthe
talked about the cell
mergingascende looked at
perma if she would allow it
and found her looking at
him with a loving smilethen
she turned around to give
mundu a kiss on his mouth
what was still green with
microalgae juicehe too got
horny and not long he was
having a huge hard what
perma and nila now both
did comfort with their
dripping vulvas

alternatlymundu ejaculated
in nila as they were very
known to each other with
ascende emptying himself
in the recwptive awaiting
longing for luomashe drank
him with satisfaction
ascende then was so
vibrantly charged from
luomas admiration that he
went onto perma with
strong vigourshe came
quickly on his strung
pumpings and he wetted
her with his essence, what
she took in and built it in

herwhen luoma and nila
were licking each other
touncing their labias and
anal openings, climaxing
and squirting all over the
placenow lying alltogether
in a cuddlepuddle of squirt
rubbing each other with it
and starting again and
again to draw each others
ecstactic fluids out to
devour them researching
taste and consistency of
semen and female
ejaculate ... a feast of
lovethey slept after that

many good hours, just
there by the water
recycling installation... with
luoma waking up in the
middle of the night to have
a peewhere would be the
toilet she asked herself,
thinking then, how about i
use the water bucket
ascende uses for carrying
up the water to be
filtered... and give my pee
also in this cycle... as our
loving togetherness last
evening has surely made
us appreciating each

others juicesso she peed in
the bucket and did pour it
over the sandwhen perma
woke up seeing her doing
itmmh, why have
ascende and me not
thought about that, it is
flowing already most
wonderfully with the
threes, them doing already
their own thing enhancing
the completion of the
information digestion
cycleascende too was
awake now having seen
luoma, she smiling at him,

taking a handfull pee out of
the bucket and drinking it
half, offering ascende
somehe was looking at
perma who was nodding at
him encouragingly while
herself feeling the urge to
let go of urinewhat she did
standing over the kneeling
ascendewashing his head
with her urinewith the urine
now spraying mundu and
nila they awoke to join in
the pee party, pissing in
each others mouth with
love and appreciation in

their eyes the place now
slippery wet and smelling
strongly of microalgae and
fruits as well as cannabis
and mushrooms what they
ate the evening before their
clothing was by now
removed and served to
soak up the urine when
they had drunk each
others urine their sex drive
got awake again and
another round of
penetrations suckings
lickings let the five roar cry
shout out loud the place

with ecstatic feeling
expressions ascended and
mundu also tried each
others semen while
sucking each other off in
69 position when everyone
had orgasmed, they
put all their clothes what
were soaked with urine
and all kinds of fluids
released in the sexy
intercourses... in the
bathtub what actually was
quite big allowing easily
three to lie beside with
eventually three on

topascende and perma
looked at each other and
were thinking the same...
what luoma and nila spoke
out loud... hey... how
about we having a bath all
together now with some
samples of the cell
cultures...as we know you
now with your semen,
permas female
ejaculations and your both
urine, we might eventually
find your evolved skin cells
being congruent with
ours...mundu did not bath

with as he wanted to research the skin cell evolution separately with his own cells in a petri dish so the four of them did take the bath with some tiny bits of petri dish cells of ascende/plant and perma/animal for about an hour did they lay beside and on top of each other without moving much, stroking each other tenderly and occasionally kiss each other full of thanking and appreciative

spiritnila and luoma were not quite seeing the same innerpictures as they did not have so much training on that as well were not consuming thc/psilocibin that intense as ascende and perma did since in the appartementperma at her permaplace was also eating mushrooms and cannabis, but not that much as herewhen they left the bath to go to sleep on the beds ascende and perma had prepared while

their flight from sao paulo
to paris... it was not quite
clear what the effect of the
bathing was, if their cells
had merged or not... we
will see in some hours
when we wake up perma
whispered to ascende with
a motherly smile in any
way, this feasts of love and
appreciation we enjoyed
this night were such a great
present to me ascende
hugging her and saying ...
we are so very lucky,
thank you all what is for

this harmony-----nila,
mundu and luoma are 25
years old with ascende and
perma 55-----mundu
had been studying the petri
dish film recordings of the
last two and half weeks
since perma was in paris,
while the four had bathed
with some petri dish cell
sampleshe began to see
the patterns of how the
cells did grow together to
merge their
characteristicswhile the
four slept happily after

their bathhe put on some
microscip lense glasses
with camera to record what
is happening on nila and
luomas skin cells after
being so lovingly
impregnated by ascende
and permas dna trough
semen, female
ejaculate,urine and bathed
with the petri dish grown
cellshe was not surprised
seeing the same merging
patterns and congratulated
himself as not having
participated at the

bathinghe believed that the sexy exchange of dna was still a strong influence, he found both permas juices as well as ascendes semen of pleasure inducing tastebut he would want to find his own plant and animal cells donation either here in paris or eventually at another place where he could travel too as the network of houses probably will grow one people have watched the recordings of our chats

and love orgies here in the
parisian appartementhe
might even try to build his
own place similar to the
one perma built, a place
where he could meet
animals in the wild not far
from the hut he would
livehe thought to himself
while recoding nila and
luomas microscopic skin
evolution... i could invite
some dance jamming
sounding
harmonysearchers from
hawaii to live with me and

we could find each our own
power animal connection
and wisdom plant
marriagei am sure that
miema and maru would be
gay for itmmhh... but
how about nila and luoma
here in paris on their
own... they might invite
some of our friends from
sao paulo as to give this
parisian appartement a
proper juice up on rytms
and pulsations of libido and
life joywhile he is filming
and thinking like this, nila

wakes up and he tells her
about his hawaii planshe
thinks it is great and
names 5 of their friends in
sao paulo she thinks would
the place here and be too
happy to evolve in such a
fucking sweet
settingwhen luoma also
wakes up and asks mundu
whether he would come
back to paris to merge with
the found animal and plant
donations he would
eventually find in
hawaiimundu.. i am not

sure, i might perhaps set up a little petri dish lab there... actually, that could be an ideal expansion scheme...some stay here in the lab and evolve the fucking way and bath in others petri dish cell cultivations while some do go out in wild places to set up a simple nature respecting outpost where the direct contact with wild nature is of greater focus...luoma saying... and there can be licking

sucking fucking too in the
wild... with nilan moaning..
getting me horny again my
tasty sister... i am gone
stick my tongue right up
your but in a
minute...mundu...and i will
feed your mouth with my
hard one,luoma...ahhyes
you two beloved ones,
take me again i am ready
right nowascende and
perma were kind of half
awake hearing their
conversations and
lovemakingthey held each

other and smiled knowing that their choice of sharing with the three was a good one

10-they slept trough into early afternoon

they slept trough to
early afternoonit was no
big surprise seeing nila and
luoma having successfully
integrated the features of
perma and ascendes new
skinthey were chasing
each other trough the
appartement playing with
their new chamaeleon style

blending in features mundu did not change as he for one did not bath with the petri dish cell samples and second did not yet want to change he wanted to have his very own gentle meeting with wild plants and animals when he told ascende who was laying himself onto the balcony to breakfast some afternoon sun rays about his plan to move to hawaii and setup a similar hut like perma had in the canaries(here the

author would like to
confess a possible
incongruency in the story...
are there chamaeleons on
the canaries ... perhaps
not native... but eventually
some people brought them
in from the tropics to set
them free here ...
)ascende was very
interested in this approach,
he saw the benefits for the
research project when
more and more
individualists like mundu
went to new wild places to

receive all kinds of new samples, possibly find new ways of merging human and animal and plant cells, ways probably not yet known to science... that would make a wide base on what others here in the parisian appartement could build up on perma was now also photosynthetically enabled, as she too bathed last night with ascende/plant cell culture so the four of them only ate minute amounts of

the aeroponically grown fruit in the appartement leaving it all to mundu who was now the only one of the five unchanged the three girls joined into the conversation when ascende was talking to mundu how they would finance the continuous setup of outposts in wild spaces everywhere on the planet ascende... there is still around a half a million left of the money an art conaisseur donated me 3

years agoi could set for
example 200 thousands to
this purposeperma... we
could buy in one act some
good sized areas of the
amazon, the congo and
the sumatran rain forests
... beside a small patch of
wild space in hawaii for you
mundu... and the
ownership of the rain
forest spaces we would
share with the native tribes
therenila... if they agree
with our goal to create
millions of more than

human like androids
...luoma... if we explain
them that we not plan to
exploit the androids for
unsustainable purposes
but we would like them to
be sovereign beings what
we do ask the favour to
help us in the transition
timemundu... the transition
from the everyone fights
for survival in an scarcity
dominated economy to a
hopefully soon arriving
future setting where
sharing and wise

recycling of the already
mined ores and new
nanotech materials will
bring abundance to
all...ascende... i have
heard the argument that
the native people in the
rainforests do stand in the
way of economical
progress when resisting
roadway and waterdam
construction of course it is
for the best of the planet if
they resist the destruction
of the few left primary
forests... but with our

research... where we are
very thankfully looking to
meet wild animals and
plants in most pristine
areas as possible building
dna for the androids...
there might be an
immense economical value
nila... i am seeing before
my inner eye how a parrot
in the amazon shares its
dna with one of us... how
precious would a feather
clothed flying android
be...in hard money
translation...luoma... you

are right, these are very
good arguments we have
just discussed this morning
the three of us whom we
could invite to come here
to spend some
transforming
times perhaps we could ask
our friends in sao paulo if
they wanted to go to the
amazon to propose this
joint venture securing the
land rights for the native
tribes while granting us the
right to be guests in their
territory to gently collect

dna samples for our
android projectnila... i know
already 5 who were very
interested when we told
them we are leaving to
paris for cell evolution
researchmundu... and i
have made some good
contacts with some
progressive thinkers in the
congo bassinthey are very
concerned to find
possiblities to help saving
the last areas of primal
forests...perma... with a
traveller who came once to

my permahut i spoke
about a tribe in sumatra
what would be happy for
help in securing their
habitat...ascende... let us
go there first before we go
to the canaries...nila,you
take 60 thousands to go to
the amazonmundu travels
to africa with 60 thousand
to secure some congo
rainforests before doing
the research in hawaii and
perma and me take
another 60k to
sumatraleaves 20

thousands for the traveling costsmundu... and the hawaian place we probably could crowdfund... would give again others the possibility to join in... like ... if we need 50 000 to buy the place in hawai, everyone giving 5000 would be a co-ownerascende... with me giving the first 25 000 for the five of us being already half of the ownersmundu... but will you have enough reserves

left to fund all the
necessary contributions to
the host cities of sao
paulo, paris...ascende... i
have set aside for that 300
000 already...when the
rainforests parts are
secured and you have the
hawaiian place half way
funded, i will have still a
hundred thousand left what
i will keep for
travelling....perma... but
eventually we will be able
to learn cellularily from the
parrots ... sample cell

cultures from the
amazon... and in my place
in the canaries i might be
able to be blessed with
some spit from my dolphin
friends.....luoma... so you
hint at a stage of our cell
evolution growth where we
can shift from feathery
winged to smooth
swimming fin enhanced
bodies at will.....mundu...if
the cell samples are being
given to us with no or
almost none violence
involvedascende... i

wonder if we should keep sending some samples to paris as to have a central lab where the ones who would quickly become multicellularly enhanced...perma... yes, it will help take the load of the wild places and will speed up the funding of the android research, like we said we would need 5 millions to be ready to make a prototype...ascende... you are right, if someone who

is kind of rich with 20
millions made with an
internet software sell
comes visiting our parisian
lab and bathes in some
tiny bits of 20 or so
different
human/animal/plant petri
dish cultivated cell samples
we have helped to grow
with our own cells and the
ones being given to us in
pleasure... the rich guy
might decide 3 millions to
donate to the project...
luoma... i know some

professional theatre
travellers in many cities
who would give half of their
property for the ability to
shapeshift their skin from
wings to fins and it was this
way it went all five of them
left with some money in
the pockets and petri
dishes cameras and
satellite internet phones to
their destination only
luoma stayed in paris to
keep up the conversation
with the hundreds of new
people who were now

following the live streams
out of the parisian
appartement when nila left
to sao paulo, mundu for
the congo, perma and
ascende towards sumatra
the next morning, there
were already 6 people
signed up for wanting to
visit luoma in her bath...
partly they were sex
addicts enticed by what
they have seen in the last
two days via the 24 hours
livestreams in the
night... but to same parts

as they were sexually
hungry they too were
longing to find
reconnection to their
cellular completion
and ascende... feeling a bit
parently for mundu nila
and luoma... had long talks
with all of the six
applicants and found them
to be worthy of joyning ...
luoma... and do not worry,
if i see one who wants to
exploit my fun for sex or is
not gently enough in the
bath when growing

multicellular... i will ask the men or woman out ... by softly explaining to him that the gentleness in our research is of the highest importance...nilq... like last night when we pissed on each other and drunk each others urine, this was with full of admiration and appreciation for each others high degree of healtyness, i would never allow a sick person to pee on me in a dominating negative emotion... so

would you never,
luoma...with her saying,
yes my fruity sister, we
know what is healthy and
what notascende... oh
perhaps you forgot... the
sexual intercourse and or
uptake of others peoples
urine is not a requirement
for the skin cell
merging...perma...
ascende and me have both
bathed alone with the cell
samples what we have
cultivated the days
before...mundu... exactly

how i want to do it in
hawaii or at least similar...
nila... so you think the
quality of our skin cells
having merged with
ascende and perma s
experimental skins is lower
than the one you will have
when your own skin cells
will merge with animal
plant
informations...mundu... i
really do not know... but i
would advise you two
luoma and nila to get out
somewhere in the wild too

to get your direct wildness
upgrade...perma... good
subject, although i do not
see it as a problem when
one human being donates
his /her cell cultivations to
an other human being, this
are two approaches what
can well be combined
...ascende... with the great
question here... can
someone who has merged
with an other persons
already evolved cells ...
find a next merge with
animal plant directly ...

luoma... i actually do not see a reason against it, look, when i heard you speaking about how you bathed in your cell cultivations there was this urge in me to devour your semen right while you was talking about the merge... this semen given i that moment was probably helping my organism in the bath with your petri dish cell samples to accept them, samewise with permas ejaculations i

licked up in our little orgy
we enjoyed last night,
please understand me
right, i do not plan to
entertain sex driven ones
... but if they are gently
and well behaved i might
teach them to use their
sexual drive for their and
our goal of personal
spiritual as well as body
material
growth...ascende... we
believe you will well master
the task to spend time with
healty minded individuals

while we are travelling...perma... when you luoma just now talked about the urine exchange happening in a appreciative way i had to think about a documentary i saw on tv recently where a reearcher talked about how like a perfume he found tigers markings to smell to him... altough the marker fluids are not urine they are probably similar as with our female ejaculations what are not urine but share

some chemical components...nila... you mean people could eventually take markings from wild cats or even all animals urine to mix them with their own cell samples in the petri dishes...ascende... this could work... as well as eventually we four who have already chameleon and plant cell enhanced skins.. we would perhaps only need to bath with some tiny amount of

animal markings/urine to
further enhance our
biological gene
wealth...mundu... i was
reading on the internet a
fantasy novel where a man
and a woman who wanted
to live as hermits in the
wild met at some wild river
and bathed there in the
pools with the frogs and
algae, they made lots of
sex in the pools and peed
in it, drank from it bathed
in there resulting in them
becoming enhanced with

animal and plant
features...we too might
find it enhancing us when
we bath in ponds and
waterplaces where wild
animals bath and take
some samples for to
cultivate them in the petri
dishes in our labs ...
microalgae, frog skin cells,
other animals sweat....
mixing our own sperm or
female ejaculation fluids
into the petri
dishes...although these
were most important

insights they shared till the last minute in the appartement, they needed to leave now to catch their planes what would spread them all over the globe... in the taxi to the aeroport they tried out their satellite phones with laptops so they could see luoma talking with the 6 interested to visit about their most recent insightson one woman did propose to build one big pool in the middle of the

apartment where
sometimes water could be
taken out to let it filter
down the water recycling
installation with the stone
and sand filtersthisway all
the informations of the
bathing processes would
circulate again and
againascende was jumping
into that discussion.... why
have i not thought about it,
you might even plant some
plants in the water what
would help the
recycling...perma....although

luoma can decide on her own how and if she would allow such a semi-natural biotope pool in the appartement to be built... i find it a very suiting propositionlike this it went on ... they could not leave it alone while on the planes watching following each other in text and video chat thisway also not feeling the small but real pain from having to leave each other when they did find that wonderfull harmonies

11- the this is that if you build the semi- natural pool in the middle of the appartement

the thing is that if you
build the semi-natural pool
in the middle of the
appartement, it will totally
change the character of
the place, nila raised as an
objection with the one of six

wanting to be visitors who brought the idea up thinking about it for a moment and then saying in a soft melodious voice... you are so right nila, i have not thought about the importance for emptyness, nothingness in the research for the advancement of cellular structures what good would it do to take away the center piece of the appartement what allows the built up energies in the

experiments along the walls to flow into each other aetherically added the one who introduced herself as monica another one of the six aspiring newcomers, fernando, did add... i can only support to keep the appartement as uncrowded and as least stuffed with fixed installations as possible, i have seen your running and hiding chasing each other playfully around at the place luoma and nila

and it seemed to me an important part of the integration for your newly reached cell evolution... luoma... as you said ascende... the ones who are here at the moment who are accepted members of the research enterprise, have full power to decide after hearing all of your inputs and monicas generous offer to finance the construction of the semi-natural indoor pool... we might find a place

beside the existing
bathtub along the
walls...ascende... and
eventually when the plant
and sand filter systems will
be in harmonious tune to
provide the pool with a
sufficient water quality, we
or the ones who at this
moment live in the
appartement... might
decide that there is no
more need for fresh water
pipes and emaille bath
tubes ... as the
informations in the semi-

natural pools are highly
valuable contributing to the
cell growth of the ones
bathing in it... mundu...
makes me think of mix
combinations from
microalgae with
humanimalplant cells from
the petri dishes living on in
there continuously digesting
and upcycling fresh input
by the sweat of the
experimentersfernando
being excited now... i am a
dancer and so are ava and
rumu too who would like to

apply to be among the
next researchers and
experimenters in paris...
we will certainly sweat alot
while dancing with each
other, looking singing
enchanted the many
coloured microalgae
transparent seetrough
bioreactors... i can think of
us drinking the microalgae
alive fresh watery juice and
sweating it refined out,
then bathing in the pools,
cuddling each other while
laying in the pooluoma...

that sounds very contributing to our goal of integration and adaptation towards the merge of all kinds of living organism, i am sure we will have great dancing, bathing, enchanting and mentally imagineering times together...so fernando, ava and rumu were accepted by luoma as the next fellow appartement-mates and research colleagues, with the other three now introducing

themselves there was
michael, suleiman and li
who were freshly finished
with their studies at the
university, michael a 30
year old doctor of human
medicine, suleiman 28
years old a molecular
biologist and li 29 having a
graduate in plant
anatomy they were living
together in a rented flat in
mumbai where their
parents had financed their
studies their parents were
not poor but neither rich,

with all of them providing their children with the liberty to proceed after their studies how they felt suiting their personal taste of life as they were accustomed to the kind of rational dominating thinking and secondhand information processing via textbooks, they volunteered to focus their attention onto the documentation of what happened so far in the parisian appartement in

terms of reproducible
methods ... how to grow a
set of multispecies cells to
print the flesh of my pinted
at home android
companion... as the overall
theme...perma was very
happy for them to offer
their rational discipline,
saying... we sure could use
some cool look at all the
many-leveled
multidimensional
progresses we achieved till
now... nila supporting that
and adding... and you

might find yourselves being supported by the dancing bathing body voice experiments of fernando, ava and rumu in the way like a wealthy person enjoys seeing live dance and music performance while eating...with suleiman answering,... might be so, but there is still the balcony to get away when the dynamics get that hot it would make it difficult not to partake fully in it mentally... with li and

michael both supporting
michael in adding in a
happy smiling tone... and
we might even put
earplugs in when the
kissing and fumbling or
orgasmic cries from luoma,
fernando, ava and rumu
get overwhelming... this
causing all of the now
videoconferencing to laugh
out healthilyadcende and
perma then said goodbye
for this moment as they
wanted to catch some
hours of sleep before

landing in the south east
asian regionmundu also
only a few hours away
from landing in the congo
bassin started to chat with
nila who was on the plane
to the foresty lowlands of
southern america, the
amazons...he asked her...
what do you think will the
elders of the tribes who
live in the forest answer us
when we ask them for the
admission to research in
their territories... with nila
replying... there might be

all kind of different views
onto our quest, we might
be thoroughly examined on
behalf of our intentions and
motivations... will the
androids robot companions
designed to help humanity,
will have an understanding
of the native tribes wish to
continue a most
undisturbed traditional
lifestyle of sustainably
living of the forests
offerings... some elders
might tell us that we might
support their land securing

efforts with providing
finances and as welcome
guests may tour the area
guided by the members of
their tribe, but how we
would sample genetic
informations and use them
for whatever purpose, that
would be solely our own
responsability...mundu...
you do not think they
would find it against nature
or ethos to gather life
informations with the goal
of helping new life forms to
spring forth ?... nila...

naah... i do not see that coming as we will explain them how we lived together in paristreating the animal and plant cell samples with greatest gentleness, respect, appreciation... and that we are striving for helping to create many hundred thousands or millions of androids who will be given to the landless, indebted, enslaved in too demanding and underrewarded jobs.... that the androids our

research aims to make possible will actually be given to the very people who come now to fell the trees and wash out the forest grounds in search for minute amounts of gold this people then might quit their low paid forest destructing employments and instead sit together with their android companions to show them how to weave blankets, swinging hammocks... build pots and vessels

from clay or press banana leaves into temporary usable plates, knives and forks, they might sell their wares directly via the internet to near or far away customers... others might decide to travel helping customers to build cobb buildings, using earth and straw, fallen tree branches and locally abundant resources to build houses...again others might offer in union with their allways to the net

connected android
companion consulting
services, on any topic
starting from humans body
health towards governing
their local
community...when mundu
adds... as for the allways
connected on the net, i
believe that there are two
approaches, one with
satelites we eventually
transport up in the earths
orbit ourselves once the
crowdfunding and delivery
of the first batch of android

helpers successfully happened... and the other component a one-to-the-next relaying broadband radio wave packet transmission technology what would allow the androids to share access to the global net also in case there would be no satellites... when nila cautions... but allways on would eventually be of a disturbance to the natural ambiance of a mostly wild place where for example

an android would be taken with or go there for its own personal research and individual growth... mundu agreeing... we could design the radio waves following the insights we gain from the cell merging processes...ascende being woken up by the landing preparations on board of the aeroplane he travelled with, jumped into their exchange... i have just now followed your last sentence mundu, probably the

rational observations and
documentary approach of
michael, li and suleiman
might show us how these
kind of more organic
natural or near to natural
antennas might be
built...nila... or saying...
what kind of cellular
combinations could grow
into such information
sending and receiving
organs...perma also awake
now... mmmhh...
eventually we might find a
whole new approach of

growing bones and flesh
tissues ... the cell printing
3d printer instructions
eventually being less top
down deciding how to lay
cells onto each other but
listening somehow to the
growing dynamics of the
living micro units itself

12-perma and michael discussing the possible changes for the 3d life cells printing device

a tries to write a
second text the same
evening at his laptop...
continuing the esoterically
selfgrowing allowing life

cells 3d printer line of
tought ... interesting you
point out the construction
of the printer, michael said,
sitting in front of one of the
models ascende had
bought for the possible use
later on in the research
project we have studied
free energy, zeropoint,
overunity effective devices
via a webpage when we
were in mumbai studying
for our internationally
respected university
degrees he and suleiman

as well as li were now on the aeroport, having invested all their savings to catch the next flight to paris were they wanted to be there where history happened in cell biology fields... li now saying ... we have not figured it out yet how the different prototypes work, some with magnets and teslacoils, others with hho, others using water atomized as fuel, some with only a few moving

parts, others with turbines
and fast rotating setups...
some even have levitation
side effects ...michael...
imagine if we could provide
the android with such a
solar plexus, the center of
the vegetative nerve
system being a free
energy device so the
android could power itself
even when not exposed to
the sun and no food vital
energy source is
available... ascende and
perma were now landing in

padang on the island of
sumatra it was the end of
the rain season, it had just
stopped raining with mists
rising from the now strong
shining sun, ascende felt
the food like feeling when
his skin exposed
underarms came out of the
aeroplane in direct contact
with sunlight in his
dataglasses he could
follow the text chat they
mostly had with him typing
some text with his sensor
band equipped fingers, he

wrote on the sides of his upperlegs, it looked like he would silently play piano or drummed a rythm this is hot stuff what you are talking here, me too has read in the last 15 years many hundred reports how inventors were trying to get their kind of working, working to some percentage with overunity, at other times not working or parts breaking, depleting etc. ... kind of, i believe that most of the

inventors, engineers and makers have good intentions and really want the devices to bring some intelligent and sustainable energy to this planet as for humanity get away of this stupid coal, oil and gas burning trip a sadly high percentage of the industrial places now worldwide are hooked on some probably are frauds, meaning that they either with knowing it oversell and underdeliver, possibly thinking they

would deliver the real stuff
later or others eventually
outright cheat ... perma...
when ascende showed me
the webpages with the
reports about the
inventors, inventions,
devices what are on the
way to the marketplace or
have been nearly there ... i
found it difficult to discern
exactly the degree of
righteousness of the
inventors ... micheal...
agree on that, possible
that we have studied the

same site, but there are also the open source plans and descriptions, if i only would understand a big enough part of it so i could 3d print some parts to replicate some devices...
suleiman ... i am beginning to see some dynamics and schematas, i mean learning to read them and follow the logic ... li...
mmmh... let us not hurry this one up, we might find enough time beside documenting the cell

evolutions to look into the plans and blueprints the inventors have open source put on the net... perma agreed on that, talking into her mic she wore on the sides of her blouse near her throat let us come back to this possible change of construction the life cell 3d printer would need as to be able to give the cells enough time to grow into each other ... must not be too difficult, eventually just

find the right time intervall
when to print a layer of
cells and when to make a
pause to let them find their
own growth pathways...
suleiman ... with us having
studied the microscopic
movies of the past
successfull mergings, our
inner imagination will
eventually help the
pathways to form when we
look at them ... like while
they get printed, we look at
them via the microscopical
cameras and compare the

ongoing cellular communications with the patterns we have seen from the recordings ... li ... we could also have several monitors beside the 3d printer what would show a life feed of microscopic lenses recording luomas skin, as she has already reached the photosynthesis from plants and chameleon abiliites, she wearing a kind of cameraband on a part of her body with what she

can move around mostly
undisturbed... micheal... i
have great interest to
partake in this journey
myself to contribute
something, like i will
swallow some tiny camera
what will show me how my
internals look when i take a
bath with luoma and some
cell samples as to grow
superhuman too ...what
am i saying super, it
perhaps is more like, more
complete ... eventually...
luoma... hey who said i

would bath with you... no i
am only joking, you look
quite attractive and
sensible, we sure will find
each other tasty enough to
aid the merging with our
joy drives of body near
field interactions...
suleiman and li were not
really into the bathing stuff
and kind of same like
mundu were looking
forward to embark on a
journey into the wild to find
their very own animal and
plants moment when their

animal/plant guide would donate them their cellular present they were thinking about going to the congo bassin when the documentation process of the initial research phase was documented and to some parts theoreticly explained...up to the point where they arrived in the appartement ... what was about half an hour from now, as they were landing in paris an hour later than when ascende and perma

landed in padang,
sumatra... or the other
way round, depending on
what route the fuel burning
aeroplanes would have
taken and what models
etc... the author a is at this
moment not sufficiently
interested to provide
accuracy or realistic
calculations but a sense of
humour would be nice too
is not it so isnt it ... ah
well, what is nila doing, she
having landed or soon will
be landing in sao paulo to

meet the five friends of her
what she already told she
wanted to go with them on
a mission into the amazon
she was kind of dreaming
imagining how she would
approach the parrots in the
forests, ask them for their
blessing and cellular
assistance so she might
eventually find a way to
integrate their cellular
knowledge into her being
... if possible she then
could set up a laboratory
at her place in sao paulo

similar to the appartement
in paris and the 6 of them
could practise some
merging sexy meditation
sessions ... the topic of the
cell printer and all the
documentation explanation
thing was not hers, she
would not want to touch
machines if it were not
necessary like with her
phone using it to
communicate and watch
stuff ... she liked bodily
sensations, vibrant
colours, dancing, bathing,

sporting exercises, sexual sessions as well as meditational dreams, with her was no shame but only unconditional sharing of what she liked, may it be yours too she often said with a strong glowing emanating from inside her, she ripe and plentyfull with cosmic rays from the deep good home

13- some autobiographical observations in the middle of it all

it may look funny or
kind of strange to the
reader that the
experimenters can not let
go of talking and chatting
to each other, jetting
around the globe while
discussing possible

hardware or process flow
design of life cell tissue
printers what is all the rush
about one might think...and
yes if a looks at it, there is
much excitement in all this
tale of a possible arising
robot companion dawn,
excitement as in, a himself
feels like he should or
would really like to
contribute some part
towards the uplifting of
humanity out of the
scarcity and general fear
and fight for survival

state... a projecting some of his characters or wantings to be his character traits... onto the protagonists in this fantastic novel... it might be part science fiction, but then, a is well aware of his lack of technical accuracy and himself just too much into potential storylines, scenarios, episodes following each other to get down onto a sober description of the tech he writes about...this not an

apology but a kind of
sidenote to the reader or a
kind aufforderung to
eventually check some
more technical serious
places in the nonfiction
paperbooks or internet to
read about the exact
workings of cell biology,
overunity, zeropoint
energy... having said this
word of caution... like...do
not believe anything written
here as this is bare fantasy
being pounded into a
smartphone by an

impatient author who thinks that his writings will do something to entertain or even inspire some fellow human beings... hey why so cynic... let a say that nicer, like... a is well aware of his personal situation being fuelled by an urge to contribute to the betterment of the human handling of the ressources this planet provides, this wish to share some potential future scenarios with his fellows makes him

excited and in the heat of the moment the accuracy when describing technical concepts... is missed or at times quite severely lost... on top of that comes a certain logic-lazyness of a who was never really into mathematics, causing himself in these days to just babbel on with the ideas regardless of consequences on the eventual readers mind.... ahh here it comes again, the doubletwisting wanting

to be funny again, are you not... smiling to himself both a little amused and part annoyed about the length this excursion now takes on... the length, here coming to an other aspect of a s behaviour... oh why not just dive into this for once, a little detour highlighting an amateurs aspiring writers mind... although he thinks that the most beautiful and his mind impacting novels have been siddhartha from

hermann hesse and the
starmaker from olaf
stapledon, they both
sharing a lenght of not
more than 100 or 150
pages, he thinks
somewhere along the lines
of ... if he could just keep
on writing several
thousands of words a
week that would train his
storytelling muscles very
well... and who knows, if
he would just keep on
letting it all out as it enters
himself when he is in

inspired or kissed by the
muse states... after
perhaps having written
great amounts of
sometimes only loosely
fitting together parts... a
might one day enable
himself this way to write
and hopefully illustrate a
nice cozy heartwarming
piece of hilariously
romantic and life fizzled
gayness... he prays to his
future self that this 90
page enchanter might not
be too far away now... a

90 page symphony of well
clicking into each other
preciously handcrafted
gems of mental emotional
comfort inducing lines and
letters arrangements-----
selfobserving note... it took
half an hour to write this
two thumbbed on a 4"
touchscreen... wondering
how well a fold out
bluetooth connected
keyboard would allow 10
finger typing, ah yes, these
were times when a was
sitting in his camping chair

balancing the tiny nokia
smartphone standing on
the holder sponge of a
neat little clapout
keyboard... mmmhh
makes a want to search
his belongings to find it
again... annoys him greatly
that he lost sight of it since
about half a year, unusual
as he finds himself having
somewhat a kind of half
certain knowing where he
can find things within his
belongings ranging in the
size of approximatly 20

banana shipping boxes

14- free energy device in the bloodstream

while ascende, perma,
nila and mundu are
switching off their technical
communication channels a
while or better said,
change their focus of
attention towards the
happenings in their near
physical area, planes
landing, custom

procedures, new colour combinations and writings on billboards, notification signs, unseen human crowd movement patterns, the thrill and blessing of traveling with its novel smells and refreshingly different sights... so while they were shifting their focus onto the material immediate surroundings... micheal, li and suleiman too were slowing down their pace of external chatting, partly because

them too were letting in the
rewarding experience of
arriving at a new space,
them now getting out of
the taxi in front of the
building in paris where
ascende had secured the
appartement with the
money he got donated with
for his lifetime artwork...
here now would fit well
some flowery charming
description of the smells of
freshly baked croissons
coming from the bistro
around the corners, a

sound of laughter from a relaxed young lovers couple who just came down to strengthen themselves sitting at the terrace drinking some coffee and let the mild afternoon sun compliment their faces... but there is more chatter coming online, it is michael again who thinks about how possibly could the zeropoint exotic free energy device mechanisms be translated into the

language of guided or
helped or ... motivated...
biological flesh cell
growth.... after that
moment when the three
got out of the taxi,
cherished the bistrot
emanations and looked up
at the building where such
exciting work was waiting
for them... he could not
help it but. had to tell
suleiman and li about this
idea while they ascended
up the stairs carrying only
some small hand

luggage... they were of the
.... the less clutter and
belongings the better ...
types of peopleli said... i
see thousands of tiny
wheels and turbines made
of bonelike material being
turned inside the androids
veins and arteries by the
flow of its blood... their
motion translated into
currents of electricity what
is stored in battery like
layers in all areas of the
body... and suleiman adds
to li s imaginary.. with

magnets and coils made of
muscle tissue nerve strings
tendons and all that,
rotating in the cave where
with the human anatomy
the stomach is
placed...that is quite
something, luoma shouts
out to them from up the
stairs down to them, you
are envisioning so inspired,
makes my heart jump ...
when they reach her and
welcome hugs are
exchanged... please come
in and feel at home, it is

great you made it that
quick to come to be
here....writing analysing
note: 20 minutes....

15- light traveling inside the body

the mind sends an undefined colourly to the heart, from where it travels in many colours towards the extremes hands feets brain the impulse of light being sent is the a sensation travels from touching the arm to the brain via the heart 0 a sensation on the leg

travels in many colours of light to the brain via the heart a side research topic of Li was the possible visual depiction of what could possibly happen inside a human being when receiving sensual stimuli one picture she is working on both in his mind and on the computer... a smell enters the nose and as soon as it is recognized by the flame in the heart of the person, its many fragrances and smell

components molecules
travelling the air get
translated into variously
coloured lines of light same
with touch sensations,
amuse bouche pleasure
in taste all senses
incomings what are being
somewhat conscious
registered and processed
the second drawing was
showing a moment when
the experimenter is creating
inner light in all kinds of
shaped rays lines circles
cubes with colours

according to feelings
hereby the mind sending
light of unspecified mild
pink violett or white or
golden colour, the heart
then adding its definite
colours and sending it
towards all extremities
head feet hands some
lines were parallel some
intertwining and rolling with
each other in the stretch to
meet the toes and
fingertips rainbow snakes
interhuddlings of thick and
thin pulsating or steadily

glowing brush strokes of
life bearing light these two
modi how the light can
travel within a human
animal and or plant body
one via sensual stimuli the
other via guided inner light
mental spiritual light
productions possibly
emanating from the brain
as a receiver of the cosmic
light powers michael and
suleiman were having this
plans of free energy
devices in their plasticly
modelling imaginations and

suddenly felt like drawing
with light could be an
avenue where eventually
the hard precise and
dense parts could be
replaced with more soft
and foamy ones., or it
would perhaps not need
any bigger modifications as
the human body eventually
was built to make this light
ping pongs or sustain its
organs with pleasure
guided light and love
journeys electric signals
perhaps ? brain firing

sparks what smoothly
stretch into glowing strokes
of nourishing light
deepening and refilling all
body cells nerv endings
reporting yellow or pink
blue and red sensations to
heart and brain the first
day michael and suleiman
and li arrived in paris they
spent looking at the
experiments what luoma
was telling them this or
that bit, watching some
recordings of previous petri
dish film recordings but

nearly half of it they painted and fantasized on this light travelling within body theme the goal seemed to become finding a more aetherical way as for electricity being generated inside both the human and the android body how to get there by recognising what possibly the body already does when in relax and or enjoying mode... and by analysing what happens in the experimenter

researcher feelings or
body sensations while
drawing inner mental
guided emotionally fuelled
imagination the three of
them were being donated
some money from the
three dancers what arrived
a day later fernando, ava
and rumu were living in the
alps of middle europe,
enjoying the regions the
lived financing their
appartement rent plus
providing money for food
and clothing.... as they did

not eat a lot mostly oat
and raw fruits and
vegetables what they got
for free from the farmers
where they occasionally
did dance practices... they
could save up each 2000
what they used about a
fifth to travel to paris by
train leaving 4800 michal,
li, suleiman, fernando, ava,
rumu, luoma were looking
in the net for 7 headsets
and upper body sensor
ladden textile what would
allow them to record their

brain heart blood pressure
activities the following day
the 7 sets arrived what
fired up the researchers
activities another notch
them now recording via
voice and sometimes video
what they dances what
inner pictures they painted
and what skin touches felt
how ... with the time
logged mental activity as
well as heart beat and pulse
recordings, there would be
mountains of correlating
data what an artificial

intelligence as well as the human observer could search for certain rules and laws of what stimuli and or imagination results in what colour intensity.... that eventually one day allowing both human and android to visualize an avocado and really feel how its natural good fat will deeply enrich the organs and the blood with good nurriture... without it being grown or eaten... just with the combination of the

recordings their
conclusions... that many
times one had this sort of
touch and it resulted in that
kind of heartbeat .. this
many times one thought
about a certain shape and
it resulted in that kind of
breathing pattern... could
there be a way one could
touch each other o oneself
what would bring the
satisfaction to both touch
receiver and giver... the
satisfaction of eating a
tomato while having a neck

massage.... the dancers
were trying to dance
pumpkins and onions or
flower scents... luoma was
bathing and sharing her
skin with whomever of the
seven wanted, also li found
herself being quite often in
the now built pool enjoying
both quiet meditational
settings as well as the
sexy ones looking back at
this lines of text... not with
reading them but how it
feels now having written
them., a thinks of

...matschig, teigig, no
prezise and dimm, missing
the central part... but now
there is an idea.... ascende
and perma were calling in
from padang ... out from
the jeep what will bring
them some couple or
hundred kilometers into a
primary forest with tribes
living from it they were
very happy to hear about
the seven in paris doing a
complete new branch
research for the android
project... mass data

collection and intelligent
mining analysings what
could give the androids
artificially intelligent
processing head a glimpse
of what movements touches
smells inner paintings
visualisations could heal ...
hunger li said to that
description of what they
were gathering coherent
data for., hunger for
nourishment, hunger for
sympathic love, hunger for
understanding... it is no
only the question... how

can a human being as well as an android tap into the probably enormously vast oceans of cosmic raw energy and use it for good body heart brain fuel ... but the other question... is there one or many parallel spaces where this mechanism already are understood and all participants of the game to live are applying it like we do breathing automatically in this special bend of the reality spaces

16- autobio or a reflecting on previous happenings in this storyline

there are now 2
possible continuations...
one to go with perma and
ascende to sumatran
rainforest trying to be a fair
witness to how the two
industrialised humans get

in a respectful contact with
a or many tribes what
consciously decide to stay
away from machines as
much as possible and
remain in close contact
with earth through collecting
the forests offerings a
does favour himself to be a
vegan person who tries not
to participate in animal
encaging as much as
possible but a would never
deny a native person to
hunt an animal if there was
a need for the tribe or

himself for meat
mmmhhh... but then when
exactly starts need and
when ends the comfortable
but not necessary area a
believes that every person
who participates in
enslaving animals or
hunting them... needs to
deal with this conscience
question... when does one
really need the genetic
informations of a fellow
animal to heal oneself from
a memory loss .. or
positivly said... if one can

jump like a gazelle and be that attentive as to other animals movements and sounds... one would eventually find access to the antelope gene pool by imitating trying to behave like it another precaution sentence or more to naming of people and places as with paris and sao paulo i do not find it problematic as there are millions living there so the chance that a catches a real persons lifeline

meaning one sees a real existing persons life in form of protagonists like michael, suleiman, li, fernando probably mundu too is a widely used name ... but ascende perma nila luoma ava rumu seem to be quite unique so a would actually change edit these names and say mirael to michael andoref to fernando luoi to li simhoan to suleiman as for the tribes, it feels to a like a risk higher than necessary

to perhaps have glimpses of a real living person if one would find the right name of one member of a tribe a does not want this connections of fantasy with real living persons as it could become a projection like a reader of this texts has a friend called li or a famous person is named like suleiman and the reader does not feel to well reading something with a name of a very respected person doing things what

the reader thinks the famous person would not do... following this a could only metadescribe it like without naming the forest and samewise not naming a tribe name this could apply for nila in the amazon, mundu in the congo bassin and perma ascende on sumatra thisway there seems no complications arise out of storytelling when only very few real names of places and people are being

included in the fantastic writing mmh.. eventually even paris, sao paulo, sumatra padang, hawaii and canary islands could be changed around into rispa, olopa aso, matrasu dangpa, aiwah and racan if a does now this renaming he senses a development of the story into more freer concepts of how human animal plant bodies can intergrow into each other without much manipulation and cutting but with loads

of time and fun gayety as
to vibrate the place up into
the uplifting jet streams of
the utopian cosmic thought
train a knows of himself to
be a bit lazy when mixing
up informations of real life
technology what really
does something better for
the human needs than
before every motor what
uses less fuel and or treats
the fuel with a more
efficiency... is welcome as
the billions of people
starting to now have cars

and motorbikes, fridge tv
and so on... the loads are
becoming higher on
mother earth ... following
this one can possibly
understand the android
research project also
having the direct cellular
becoming more wholistic
evolution of the human
being part with here a kind
of half magic esoterically
wishpower motivated cell
remix in life skin tissue the
other half perhaps some
bits of science but mostly

half-intelligent storyfilling
mmmhh a says now he is
trying to bulge the stories
up as to smuggle in his
real life concerns... but
then there is real rainforest
in many places on the
planet dissapearing at that
moment when he writes
fiction... how would a not
want to write one most
beautifull and wise and
humorous light and in a
gay mood... piece of text
what could eventually
inspire a half-rich person to

donate some two millions
to him as a homage to
the last 15 years of his
writings photographing
filming ... yes a would take
it and most possibly try to
do something world
changing for the better
with it but of course this
not being the reason but
why not a possible
consequence having talked
about some small parts of
names and the possible
influences of fiction writing
on real living persons... but

then, exaggerated also

17- mirael luoi and sulmanei in rasep

mirael luoi and
sulmanei in rasep oh the
names do not fit yet but
this could a source of
humour the names slightly
changing some letters
around of the previous
what influence then has
fantasy name giving onto
the devellopment of
stories... it is starting to

rain at a s forest relax
place and getting colder...
nila in paluso aiming to get
to the mazaon forest
mundu in ocong bassin
and ascende perma in the
overland vehicle four wheel
drive car towards the
primal forest of trasum
having landed via
aeroplane in angpad ... the
three expeditions have had
the desired outcome with
local living tribe members
accepting their presents of
each 60 000 what was

used to buy the title to
their lands with the nation
states what claim to have
autotithy over this region
mundu built a very simple
experimenting place where
anyone tribe member or
eco tourist could continue
with the peacefull cell
evolutions and inner mind
drawings of how an human
animal plant enhanced
android could nurture itself
from the visualisations of
body sensations cell
signals and the light effects

of mental wishes onto the
body

18-nacabsi

a being warm inside
now writing at the laptop ...
how can he get out of this
autobio trend now in full
speed entering the fantasy
fiction parts ... mmmh.. is
it a guilt complex having
not told a brilliantly
colourfull tale around how
the visits in the rainforests
were ... or the confusion
about how important are
names ,, would it be

better to write the
commonly used reality
names or should fantasy
names save the
disconnection of fantasy to
reality ... but wait,
disconnection ... what trip
of fear is that ... is this not
about growing softly into
each other, understanding,
enhancing, getting
wholesome and
handarmlegssome
humanimalplant element
enhanced style ... yes it is,
but then ... how many

readers will that text have
who are fuelling the effects
of the story onto reality
with their own recollection
of what they wish to the
world to become better ...
how many readers might
this text reach who could
eventually being led with
the namings to project
some emotions and inner
pictures towards a city like
paris, risap, rasip ... oh
yes, it is in full swing, the
blabbel like i would talk to
the baarkeeper when being

drunk and having no one
to tell him how i am stuck
in my writing, facing a wall
of sober cautionairism
luoma, donanref, ava, umu
were mostly dancing
around the experiments
aeroponics, bioreactors,
petri dishes and bathing at
times in the pool they have
rebuilt into a semi-natural
one with now still having
one classical bathtube
what was able to pipe
freshwater in and release
used water in the sewer

canals of risap luoi was learning fast from luoma with her skin being merged with ascende and perma ... luoi too was after three bathing meditation sessions with luoma enabled to soak up the sun and photosynthesise the light into nutrition ... mirael too was joying in the bathing fun while manulsei was actually the only one still using the rasip city water as to not become changed too, he somehow

wanted to keep a strictly human genetic of course he kind of wanted to join in the fun the others had bathing together both in meditation as well as in sexy moments, but he felt already blessed enough to be here to see his friends metamorphosing so he was actually so excited by his fellows growing into completion, that he found more and more evidence as to why stay human ... not actually fearing that the

process might be having some negative side effects, why should that be ... as there was no synthetisation happening and no forced separations or pushed fusions ... the processes in the rasip apparement laboratory went slowly, over days, on the cellular getting to know each other and try to intercopulate till a possible recombination could be found or no synergy was possible mirael and

donaref were wearing their
body signal recorders
during the 5 times they
bathed and at the fifth time
became plantanimal cells
enhanced the database of
correlated recordings of
what happened in the
outside with audio and
video capture ...with what
happened inside via the
body signals recorder
sensors ... the database
archiving all these
connections ... would
eventually enable the

artificial intelligent software
of the desired android ...
the database could
eventually enable a self
learning and itself software
and hardware wise
improving tuning ... to
understand the reasons for
hunger or otherwise said
how a recognition of the
benefits of touch, smell,
sound, visuals can send
light to ones heart and
stomack... or how a pretty
picture of oneself at the
pure sandy sunny ocean

beach ... cohowuld
eventually warm a person
suffering from being
exposed to cold weather
for example ... one of the
future android eventually
being asked to descend
thousands of meters down
to the bed of the oceans to
close a leak where some
oil drillings have caused a
mess ... there it could be
very practical if the android
could imagine itself being
exposed to the sunlight ...
or any other scenario what

could balance out the cold and dark sensual inputs he would get down there the documentation of the whole project since perma has moved in with ascende at the appartement in rasip, has not been produced yet in a form what would show some serious order and continuosum ... as there were a couple of side themes what asked for jumping at them when they came in to the discussion

... or one experiment
reacted to the evolution of
an other petri dish culture
... the dancers saw via life
microscopic projections
onto the floor the changes
of their skin cells how they
grew into each other ... the
love makers in the bath
could look up at the ceiling
to see their skins being
enhanced while bathing in
the pool what was alive
now with all kinds of
organisms growing from
petri dish grown samples

and microalgae, body fluids ... all fluids and samples of cells were being contributed with the most possible gentleness and soft smooth handling, joy and fun being the lubricants for the cell types to grow into each other as the visits to the rainforest areas were happening in mutual understanding and dignified styles, ascende and perma were not longer than a week later arriving in nacarsie islands where

perma had her
permahouse or permahut,
her garden following the
notill but mulch principle
.... nila having been
allowed to donate 60 000
to the buying of landtitles
for parts of zonama
forests, she wanted to join
ascende and perma after
she spent some days with
friends in the paolosa
appartement introducing
them via webcam to their
parisian fellow researchers
... as not to complicate the

already too complexly
written story ... the author,
naming himself ... a....
does not intend to come
up with some new 5 or
more names for the new
researchers in paolosa ...
nila arrived at the hut of
perma about a week later
than the two who have
made use of their new
found quiet and silent slow
lifestyle on the island with
no camera and
experiments to look after
or to look into and produce

some externalisation ...
while mundu was
successfull too in the
nongco bassin and flew
further to awahi where he
intended to start at first
step finding himself a
situation where nature
animal and plant realms
would share their spores
fluids semen eggs
branches saliva urine leaf
dew with him in charging
moments of over logical
super e motional instances
ascende, perma and nila

stopped recording,
phoning, chatting
electronically for a while with
themselves too talking less
and less to each other, but
listening to each others
moans of pleasure and
relaxation when lying
beside each other in the
sun or when swimming in
the ocean, jumping off a
rock into the water,
dancing at the beach on
sunrise and sunset, picking
the berries and pulling
carrots out of the ground

... they lived a simple life
for about 4 months ...
when mundu and his two
awahi friends were
progressing quite a bit into
building a field laboratory
what was not far away
from being as functional as
that in rasip ... but of
course here was the air a
lot better than in paris, the
flow of it as well as its
molecular content ... the
roof and walls of his
laboratory had big window
glass elements with the

bioreactors of microalgae
soaking it up very
thankfully as well as the
inhouse tomato bushes
and cannabis mini trees ..
oohh... amtoto red squishy
fruits the size of a fist ...
making a deliciuos utschkip
.... haha, very funny
but perhaps it is
nacasib growing all over
the place boom boom
boleee

**19- mirael manulsei
and luoi were
returning back to
their
documentation
efforts**

of the first few weeks
when ascende and perma
changed their skins into
multispecies ones after
three months of wearing

the body signal recoders
and correlating audio video
recordings, they as well as
the dancers and luoma
were now most of the time
working researching
without so much
recording the dancers and
luoma spent much time
now with the integration of
their new cells and the
abilities it brought for their
body sensations ... the
seven still continued to
draw how they felt their
inner light was travelling

inside their bodies ascended
perma and nila were doing
not too much neither but
mostly enjoying
themselves mundu was
quite busy going around on
awahi to enjoy smooth
encounters with wildlife,
collect urine and feces of
wild animals, feathers and
skins being given to the
environment in purposeful
actions... there were
sometimes acts of violence
involved around the body
parts mundu found, but he

asked himself if there was
hunger involved as the
motivation for a killing...
the remains might not be
that negatively charged
compared to for example a
researcher capturing a live
free living animal in order
to take live cell samples of
it without its consent
mundu did cultivate much of the
cell material in his field lab
on awahi, some of the
cultivated remixes or
several cell types having
grown into each other the

slow and peacefull way,
some of these cultures he
did send to risap where
luoma and the dancers
nandoref ava rumu were
bathing with them other
parts of this sendings from
awahi were cultivated in
the petri dishes in the city
appartement of rasip under
the tireless attention of
mansulei who was now still
not bathing with the others
in the life rich semi-natural
poolhe stayed strictly
human, having a sober

and most objective view on the metamorphosis what happened both in the petri dishes as well as with the human experimenters themselves now five months after perma and ascende started to change, there were hundreds of successful animal plant, plant human, human animal.... cell intergrowings both in the petri dishes as well as in the semi-natural pool where all except mansulei

bathed regularly mirael and
luoi were sometimes swept
away with emotions and
inner light journeys ...
when they were done with
the documentation
work looking at it from a bit
afar, and when reading the
comments and
suggestions of the several
dozen follower of the
research, the ones
watching both the
microscopic camera live
streams as well as the
dancers bathers and

documenters enjoying and working... the feeling arose after another month like this... now a half year the research ongoing... the feeling arose as to put another step forward... perhaps presenting the documentation as well as opening access to the many thousands of live recordings both micro of the petridishes and macro of the whole appartement.... allowing a wider audience to share

the gathered material so farthere was also all this hundreds of hours material audio and video recordings correlating to biosignal recordings with the formulated intent to provide a database for visualising the nerve signals from sensory inputs into a truthfull manner and possible find out how internal imaginations affected the body directly...it was at this time when both the fans of the

research as well as the contributors felt it was ready to go one step more public.... that ascende perma and nila were contacting the appartement in risapthey were planning to stay a bit longer offline as to deepen their cellular growings and keeping their focus totally onto their encounters with each other and their natural surroundingperma ascende and nila were listening intensive to

mansulei when he tried to give a brief overview what happened in the risap city appartement during the last five months especially happy made them to hear how mundu was able to cultivate the animal material he found with plant and human material in his field laboratory in awahi they agreed that it would a good time now to present all the so far gathered data both documented and analysed

as well as the
uncommented raw life
streams for free to the
general public with no
restrictions attached as
how everyone could use
the insights and methods
found by their
researchmundu was also
calling in at this moment,
him too being still
unchanged like mansulei,
not because he really did
not wanted to become
multispecies ... but he felt
attracted by the mindset of

mansulei what consisted of an unexcitedness and cool detachment what still had a warm glowing sympathy for the overall goal of the project to allow humanity to evolve into a more complete a more whole being mundu too agreed on the plan to present a compilation of their gathered data and successful cultivations to an even wider audience, without paywalls or asking for contributions but... he

was emphasizing in the discussion what how to present... there could be mentioning of what kind of magnitude of finances could further this or that branch of the several types of research they were into and directing attention onto the various fields they have not yet ventured into for example the build of the skeleton everyone agreed on that too so the next three months went by with mostly mansulei luoi

and mirael producing all the documentary and overviews with the projections for future milestones to be reached with this or that much both human researchers time investment as well as with this or that much financial backing after 8 months since perma moved in to the rasip city appartement, mansulei as the leading author together with his documentary assistant presented a 300 pages

paper with many links to online video and audio recordings, body signal recording sets ...it found a overwhelmingly amount of interest both in the acadamic field as well as with the future enthusiastic laymen and laywoman or more gender neutral said ... the ones who hoped utopia would once be able to built on earth with the sensitive use of technology, balancing esoteric with exoteric

knowledge to end the killing money began to pour in with small amounts but many millions contributed, unasked for some popular science journals and gadget news sites were picking the report up and celebrating it as of its both entertaining and fantastically inspiring contents as well as lauding the professionally scientific conclusioning comments descriptions and well named links to the various

types of audio/video/signal data sets within these millions of fans who sent some 10 to 100 money were also a couple of thousands who were asking how they could participate in the research, if they could get some samples sent to them for a bathing upgrade and or cultivate the evolved cells at home in petri dishes some wanted to visit the rapis place to enjoy bathing with luoi luoma ava

rumu and andoref...so it got busy in pasir mirael and mansulei found their work to be done sufficiently and wanted to go back to south arimca to see both places the house in palosa as well as go sampling in the rainforest places ascendes money helped to securethey left one day after the report was presentedon the second of january 2022a week later a letter arrived in paloso of a famous entrepreneur who

made several billions with
future benefitting
technologies(no
mentioning specifics here
as not wanting to
assimilate a real currently
active entrepreneur with
this fantasy...) but let us
assume this visionary
entrepreneur would have
built several multistorey
high vertical farm buildings
in major millionpersons
cities all over the globe
selling the produce at a
little lower price than at the

local market the letter was having a proposal in it ... that mansulei and mirael would help him build up a 100 million investment plan as to commercially produce androids what would be sold for reasonable prices higher than what the researchers have proposed but still under ten thousand also they were able to use all of the research and intellectual data of this venture in any way they

likedmirael liked that bit with being able to use all the gathered knowledge gained with a abundantly prefinanced roll out of products... while mansulei was cautioning that most of the necessary research and construction samples materials were not yet here in the present but depending of the engagement of thousands of researching hours waiting to be contributed in an equally leveled mind

fashionthey wrote all that the same day in a letter to the entrepreneur, answering with a fundamental yes they would love to help roll out hundred thousands of androids for no more than ten thousand the piecebut the necesssry research till it would be ready for production could well need 3 years for example with 50 000 research hours invested by perhaps 50 to 500 researchers.... with

that being the question mirael and mansulei asked johno the entrepreneur... how could we find these fellows and will they too be allowed to build on top of the researchthe next day an email came from johno...i am so happy you are going to help doing this... everyone working on this project will be allowed to use all the data in a most open source way... i feel that we do not need three years but a half one

when 2000 researchers will
join us.... me alone i know
about 300 who will love to
work on this especially also
as it has this human
evolution success what
ascende, perma, nila,
luoma, luoi, andoref, ava
and rumu have shown
...mirael and mansulei felt
right about that offer of
joho, they called ascende
and perma on their
secluded permaplace in
the ancary islands
...ascende was crying

tears of happiness when he heard of the bold plan to produce hundreds of thousands of androids in such a near timeframe and such a an affordable price with all the intellectual material open source available... he and perma gave mirael and mansulei their blessing for this venture and thanked them from their very heart from having reported so whollisticly well on the groups researchmirael

saying then... do not say
goodbye to intensely, we will
be back soon to crossfire
the roll out of the 2000
euro dollar pound android
for the masses, we might
even find ways how people
could grow their own
android at home...perma
now jumping in... yes, a kit
containing our advanced
3d printer what gives
enough time for flesh and
bones finding their very
own structures and
building microcomponents

to stack assemble with
each other

20- butterfly and bat

butterfly and
batubretyfabtnilai was
asked by mirael and
mansulei if she wanted to
join their management
team for the 100 million
android productionsell 100
000 at a price of 10 000 or
200 000 at 5000 with each
costing between 3000 for
the 10 000 model and

2000 for the cheaper
versionnilai was in as she
longed for some younger
company as well as she
wanted to meet butterfly
as well as bats in the
rainforest of zonamia she
would ask them to join her
in her body journey to
human animal plant
completionher condition for
the working with mirael and
mansulei on the
commercial rollout was
that she would donate
some of her cells what she

could grow on and in herself for 3 million what she would donate to the native tribes some bigger pieces of rainforest could be secured that was cool with joho the investor, he liked hiking in the kiroc mountains and he was delighted to have an under 30 year old providing cells as matrixes or matrizes after which the androids could be built upon nilai went with a boat from nacary islands to pasin and

from there took a flight to palosa and again there taking the boat to get into zonamia forestsoh but wait it is lembe in south cerima where she took the boaton the way with a boat what had an electric motor fuelled by photovoltaic panels on the side and on deck of the boat she met thousands of butterly at day and hundreds of bats at night allowing her to understand more and more about themone night

... nilai went early to sleep
after having eaten some
freshly harvested
rainforest fruits she
collected in the forest at
the side of the river...
stupid it seems this
namings ... descriptions
lacking vividness ... he
please a stop interjecting
your critic autobio wish
thingie... but hey, how am i
the author as a and
whatever so cruelly taking
away the attention away
from nilai lying on deck of

the boat listening to the evening forest serenades mix.. puuuhh... made it again upwards... at around 10 in the evening or about after sunset 2 hours later or half an hour, the bats she saw usually hunting in one or two meters distance from her were hunting moskitos closer now at ther nilai was so relaxed and thankfull for the bats to bless her with that trust saying we come into your reach of arms and feel you

are not gonna harm us... she smiled silently lying on her back sometimes with open eyes sometimes with eyes closed concentrating on the air pressure changes or winds she felt on her face as a result of a bat flying above her in 50 cm height catching a mosquito what was aiming to suck nilai's blood the bats were kind of an organically moving mosquito net one could think of a possible fluid like saliva or

something of the bat
dropping on nailas naked
arm where her already
chameleon and plant
enabled skin would soak
up the dna of the bat and
created an access to the
cosmic bat data cloudso is
a an utopian what brings
dystopian self critic or auto
bio stuff in to get some
other story colours than
happy pink and violet flame
seriousnessnilai had some
50 000 of cash with her
and 2 950 000 she could

transfer with her satellite
connected
smartphonewhen she
arrived at the tribes to gps
fotograph borders of what
they understood as their
hunting area for later
aquisition of titles of the
land with the national
states surrounding the
forestnilai and many tribe
members felt doing the
wrong thing when she
transferred hundred
thousands from her
account to either a tribes

account or directly to the
national governments
treasury departement how
much poor people living in
the slums of megacities
could be helped with that
money.... but still they did
and thought by
themselves... this money is
not from the earth or even
if it is stolen trees from her
and secured with stolen
gold ... this money is built
on weapons, built upon the
will of someone to use
violence to defend his loot

from plundering the
earth... not that the author
would live a feather light
ecological footprint ... ah
yes here the link this
money is not soft and
respectful enough so we
can give it back to you with
good conscience we will
make better cash ... both
Nilai and the tribe members
were singing out in a bit
sad but also happy tune,
weird harmony but let us
fly back on the wings of
the butterfly can one

imagine the perspective
just in this moment when
the reader sits there in a
restaurant or cafe house
and reads this ... oh is that
now a shizofrenic show or
mad writing to find out how
the author can divert
himself from what he
actually wanted to tell like
playing chess against
oneself who talks more
winds wins... ah no... the
cellular evolution is one
focus here ... bat gave
saliva what nilai chameleon

plant photosynthetic nilai
analysed sensorically and
on an overself level ... like
when one really lives in a
moment and the core data
center fluid mellow
lovehoney of prime
essence of cosmic
beingness... a fraction of a
second in a kiss... or an
erotical orgasm ... a
moment of oneself having
surrendered the control
over oneself to the greater
we of just this moment ...
before and after that

particle of a second
everyone is feeling in a
majority of control over
oneselves actions ... it
could be that a has this
fear of a nice story badly
narrated so he goes into
autobio reflective ego
psycho doc hour mixing
with a potentially superb
storyline ... nilai thanks to
bat and butterly joyfully
donated essences was
enabled to start the
production of many
hundreds of thousands of

android machines with
selflearning artificial
intelligent software who
would by the way improve
their own source code plus
hard fire soldering their
electrical cicrcuit
motherboardsbut wait ...
was not the plan for the
android be non metallic
and wet and grown like
bone and flesh ... so let us
forget a just described that
outdated picture of an
android soldering around
his brain platines... nilai

gave hair and saliva and urine with also her monthly period what with her was not much as she was not really looking forward to give birth to an offspring these days as well as not needing so much cleansing as she had so much fun all day travelling the primal forests ... the wild animals trusting her... ah yes how about a butterfly day guided visualisation.... now i really felt pain in my hands after having typed

all this text holding the
smartphonea switches
over to his laptop where he
too knows that he will get
pain from his palms resting
on the batterie heated
laptop parts ... so actually i
should make a full stop
here ... and look at this
insight after having
wirtten about 2000 words
or more the body starts
suffering from being in
contact with harddisks and
batteries screens etc...but
then again,,, do not lose

the story ...nilai sends
small to big containers
regularly to paolosa where
the fluids are being
analysed chemically and
microscopicly and dna is
being extractedi can not
write that the way i want
am i possessed
aahahhhahah ... little
horror ... but no, really i
feel tired and pain but
againnilai and the
butterfliesnilai was so
happy she could travel
along the rivers bring

people the money to
secure their hunting
grounds and while
travelling she got into
deeper and deeper
understanding of how the
bats were the butterflies
were kind of taking longer
as one can imagine ... as
the human being has quite
a history of slaughtering
and massacring each other
in unnecessary conflicts,
this strong traumatic
behaviour is deeply
engrained in the cells and

the butterfly smell this cells
evaporating so they do not
want to be too near to that
kind of poison
mmmh... bullsh.. what is
bad on a bulls shit ...
nothing ... it is excellent
fertilizer...of course are the
butterflys also eating
something so they would
have compassion with the
human beings having
eaten each others soul in
their useless conflicts ...
ha, that hit home ... we
are our only devils ...

consuming each other in
hate and concurrence ...
stupid ... so ... the
butterflies could
eventually be both fairy like
and pure joy supporting
the material plant bodies to
grow well into the light ...
and also fruit sugar
drunken swingers enjoying
sexuality ... mmmh... lost
the point again ... have to
jump up to read back ... ah
yes no again a total crash
of romantic energies
building up the preparation

of the scene of butterflyies
kissing the girls cheek in
thousands yes , why
not ...nilai and the
butterlyies kissed at
around the 200th day after
she started to travel the
zonamia on her boath it
took the butterfly effect
that long to come home
from the world ... the
butterfly collective wanted
to be sure that the work
nilai was doing for the
android flesh and bone
construction was a good

one ... so the butterflys in
the zonamia telepathicly or
wing vibrationally
communicated with the
nearest butterflys on the
android production site in
gneipk ... ah no ... the
province name is otherwise
... forgotten ... does a can
find the point to illustrate
the picture of oneself
seeing the universe like
surfing on the colour
chaning fields of
microraster fields on the
surface of butterfly wings

... oh it hurts so much my hands your own fault why do you want to fill your fantastic story with all that autobio stuff ... is not nonsense, is relevant but fairly distracting the romantic reader whom i tried to lure into this story with the title amour amour in paris ... but then again, i changed to rasip and trying to make it complicated and unnecessary complicated ... mmmh... is a having a war against his body,

making it suffering by
typing unnecessary words
and annoying the reader
...back to nilai ...the
butterfly collective needed
200 days to learn to trust
nilai and the android
production process to this
degree as they would give
her a necessary big
amount of their juices in
order for nilai to make total
access to all butterfly
beingnesshere is to
understand or a possibility
arises for the author to get

some of his inner connections together and show himself to what he was able to dream of publicly after 200 days nilai and mariel ... mirael and mansulai ... have spent 3 million on forest securing, 17 millions in the labs of paoloso and were ready for the 80 million production cycle what would happen in the far east of the globe... if one looked as the center being eporeuthe hundred

thousands of highly capable androids were sold within 10 days ... bringing in 200 and more millions joho the fincancer was so happy with the work of muriel mansulei und nilai that he donated them 50 millionsbut still there is the picture missing from the butterlys kissing the girl nilai while she was thinking sitting looking at the river at daytime a will leave that to draw to the readerin these empty space one

could try to draw it if a
reader would want to do
such a thing ... but again
... thank you for reading
and sorry for i am spoiling
the nice moments and be
so good on the nasty ones
... ah... blabla bla ... i am
good guy am i not ? ...
some small porn writing
what everyone has fun in it
... what does that hurt or
how could that be a bad
thing ... perhaps this
autobio in between
switching several

perspectives such
chaotically deserves more ...
nanana, what is that for an
attitude to serve the reader
... meymey mey ...infantil
.. eventually ... but how
not wants one be a
butterfly child mmmh....
bat and butterfly having a
child ? very interesting
parallel story dimension ...
how about nilai having
witnessed in the 200 days
how in the twilight between
day and night and night
and day the two species

meet shylish ... purpose
being to conference with
what they sense happens
with the human beings who
search the wisdom of the
bat and butterfly tribes to
reconnect with perhaps
they mated ?or it went
more like a very elegant fly
in between dance
orchestra of grillen
accompagnied and
monkey cries und birds
songs ...each one after
ones gusto in ones internal
imagination with that i

leave the typing board and
say thank you for coming
with me to this place in
space and time

21- growing 300 thousand androids

while nilai traveled along the zonamia river being studied by the bat and butterfly swarms for her and the android productions process worthiness of the animals contribution... mirael and mansulei invested some couple of millions in high tech machinery laboratory

equipment not only did they work in former freak friends group paolosa house but also bought some several new places where they provided good income for biochemistry and microbiology students of the citites university... also biomechanic research was a huge field where dozens of new participants were applying to be part of the research from all over the worldas joho had full confidence in morael

mansulei and nilai that they could coordinate it all on their own, and nilai busy with doing all the land title securing for the native tribes living in the remaining primary rain forests, the two men were most of their time spending in the 200 days of the research to overview all the connections with what the around 1700 researchers here in paolosa and some 300 at other places interchanged

their findings and built upon each others worksimilar to their activities in the rasip appartement, they were mostly documenting, here and there providing a suggestion but mainly trusting the highly motivated young students as well as the other more senior volunteer participants who either traveled to paolosa from far away to help with this very first creation of such a

biologically near to nature
grown androidthe budget
of mirael and mansulei was
20 million, with 3 being
invested for nilais forest
land title securing, around
5 got invested in tech
equipment, another 5 in
salaries and around 6 in
buying land as well as
building houses together
with the people of the
slums of paolosa.... it was
such a pleasure to witness
how the local people were
helping the project, of

course them building
houses for their own living
was part of the salary...
the project provided at its
height of prototyping
research activity living and
working research lab
housing for 1700
researchers and 4000
people who built earth
material based natural
houses, cooked,
transported cell and bone
and flesh pieces between
the hundreds of distributed
places and helped in many

assisting ways to the
researchers some of the
places the two bought with
the 6 million allocated for
lab facilities were not really
in the slums but in the
village areas near to the
town the villagers were
happy to sell some of their
land to provide living and
research places for city
people as they have heard
how hard it could get in the
city to find decent
employments mirael and
mansulei too spent a good

amount of time talking to everyone how the life of the people could change for good once the research would have been finished, the assistant local people would not only be able to live in the houses they built for themselves but they would be given the titles for the land on which the houses stood as a thank you... one might ask ... why did they only got the ownership of the houses and the land after the

research finished... is here
a kind of fear involved that
if given to them before the
end of the research phase,
that they would stop
assisting the lab
technicians,
microbiologists,
biochemists, biomechanic
and all kind of other
researchers with their
analyses, growing of
organic body materials for
the soon to be mass
produced highly blending
into nature's way and so

let the author... a.. change
this around... mirael and
mansulei were able to
finance living and working
research spaces for 6000
people with just 6 million ..
what was only possible
with the villages
surrounding the paolosa
megacity solidarising
themselves with the project
selling land for lower than
usual prices... this was
also greatly helped by the
promise of mirael and
mansulei that once their

research project was fully accomplished and joho went into productions with hundred thousands of highly organic built androids in the far east... why in the far east one might ask... why not to build the androids just here at the research facilities using the massive abundance of energy the south necarim region had from its traditional sugar cane plantings... so changed the production

setting would be ... joh
agreed ... 50 000 androids
selling for 10 000 each
costing 3 thousand to grow
with the completely newly
engineered 3d printers
what gave each layer of
bone and flesh tissue
enough time to find its
inner wantings how to best
grow together with the
previosly laid down layer of
cells... 50 000 androids
would be grown right at the
research facilities and the
other 50 000 of the prime

model still as previously
planned in the far
eastmmhh but what
about the 200 000 being
previously thought up to be
sold for 5000 each while
costing 2000 to grow...
joho felt so positive about
the success that he
actually did donate 50
million to the group of
friends centered around
the rasip appartement...
thanks mostly to their
sharings of pioneering
research the whole

enterprise was possible...
so he gave the 50 millions
to the group of friends
when the research was
well 100 days going on
strong, naila's newly bat
enhanced dna being
successfully applied in the
lab tissue growings... the
friends group at that time
jumping in with their own
10 million what got
donated by hundred
thousands of unasked for
donors from the fans of
the rasip apartment

research... joho was happy to see the group of friends... ascende, perma, nilai, luoma, mundu, mirael, mansulei, luoi, nandoref, ava and rumu sending him a beatifully hand written and painted picture kind of visionairy mind map... telling him how the group is going to produce 200 000 economicly grown android models and distribute them for free first to everyone who has helped the

commercial production of
the 100 000 androids
selling for 10 000 each...
so the farmers who sold
their land to provide land
for previously slum
habitants dwellers... as
well as all assisting and
researching and growing
the androids all 6000
people in south namrica
region as well as around
double this much people in
far eastern nachi ... were
looking forward to having
the very first grown

androids for themselves as companions what who would make their future economic survival much easier than before same as in the paolosa region, the production facilities in nachi were also built with natural materials using earth clay and rice straw mostly... it all happening in a slow but steady build of a decentrally orchestra... the center being the latest updates of the several cell and bone and nerve and

muscle tissues what were available to all the hundreds of small living and 3d printing arrangements in the two places... one could try to imagine seing 18 000 houses measuring 50 sqmetres... with around a third having live tissue 3d printers in them and small bioreactors petri dishes etc... so everyone of the 6000 ready for production places would be producing 50 androids ... nah.. wrong

calculation... a forgot the 60 million additional now available capital for the goal of 200 000 economy android models... it was mundu who got chosen by the group of friends to help mirael and mansulei with the additional investment into buying land to build living and working space for another 24 000 android printing earth huts and another 48 000 assistant living room earth buildings... so there were

at the end of the 200 days
nilai traveled on the river of
zamonias gaining the trust
of bats and butterflies... 30
000 small scale places not
only in south nekarim and
the far east nachiland but
also in the middle
roepurian region and on
other continents were
ready to grow 10 androids
each... needing a week for
each one to grow in a
sustainable way there sure
got some numbers being
juggled up for example

where are the 80 millions
joho had reserved for the
production process... ahh
...50 of that he donated to
the group of friends who
made themselves adding
their own 10 millions the
donation of 200 000
economy built androids
possible... leaves still 30
millions what can
backwardlz thought be
invested to buy materials
and estate to set up the
android grow houses,
printers, bioreactors, solar

panels and all that as for the kind of investment they chose mostly single person or small groups collectively organised to supply the tools needed for the growing, this way again supporting a tradition of most independantly working and tinkering sort of unique craftpersons, people who believed in their products as themselves they understood all the logics of their setup and working

principles

22 - looking back in decent placidness

time to look back
decently relaxed how the
others of the friends group
have lived through the 200
days of the commercial
prototypingluoma nandofer
ava and rumu were having
guests all days and
nightsmusicians dancers
painters jongleurs and also
writers were fascinated of

the rasip appartement and its delicate and balanced mix of experiments petri dishes bioreactors hydro- and aeroponic plant grow installations and of course the pool now growing plants in the water and becoming more alive with each bath people enjoyluoma was under 30 as mundu and nilai, while nandofer ava and rumu counted over 40 summers in their livethe four of them built something like a

gang together in the weeks since mirael and mansulei left to paolosa... where did luoi went ? to the nogco bassin to have an original authentic meeting with the wildlife ... if a remembers correctly...the four what had the last word what was happening in the risap place were organising themselves in a chaotic consensual way... was a guest announcing him/herself all four had to agree on the person

staying as well as to how long ... what depended on how beneficial for the appartements aura the guests activities could be perceived hundreds of people were bathing with the four dancing jamming and within hours discovering that their skin upgraded organically to photosynthesis ability and some also got the chameleon thing... weeks in the 200 day prototyping nilai sent also some

samples to the risap place
and it was partly added to
the pool but also cultivated
in petri dishes and
microalgae bioreactors
where people drank the
nourishing drink it was no
surprise for luoma and the
other three to feel her bat
consciousness soon after
having bathed in the nilai
bat enhanced cell in the
pool and drunken from nilai
bat urine nurtured
microalgae and oyster
and rumu were quite eager

to let themselves grow
some bat wings built upon
their arms... and grew they
did, with each one different
as by the others possibly
on the experimenters
imaginations and body
type... not long before they
flew some meters on the
balcony one night... being
reluctant to do so in
greater public as it may
scare fellow citizens...
when the multiple painters
visiting were painting of the
four transforming this way

and writers were blogging about it publishing articles in the netmagazines, another surge of attention came to the rasip appartement with hundreds of millions watching the live stream of the appartementthis stage of human arms growing themselves individually different shaped and sized bat like wings what allowed actually allowed to fly some meters high and far, that triggered the public

interest enormously... as
nilai was sending news to
the rasip appartement that
she was in contact with the
butterfly hive mind asking
for access to its richness...
and it felt like the chance
would be given sometimes
in the next weeks or
months ... it depending on
the rippling back of the
android growing research
project... the four were
motivated even more than
before to keep the energy
of the place in a most

symbiotic and comiracling
statethe visitors guests too
were showing a highest
degree of original authentic
contributing most all of
their being when there, in
these times most beatifull
improvisations in dialogues
songs dances and
massaging each other
were being cherished by
millions of web watching
fans ... for free and with all
the intellectual and visual
audio content being given
open source no rights

reserved everyone
welcome to reuse remix ...
hundreds of hours were
being recorded and
uploaded to other
streaming sites from where
again more internet traffic
followed.... the popularity
of the bat wings enabling
rasip cell experimenters
lab was at an all time high
with approximatly a tenth
of global human population
feeling a genuine
sympathy for the project
and regularly joining their

live streams joho the businessman was asking the four in rasip if they would be interested in having some small advertisement with their streams, like 3 seconds before entering ... and they found it acceptable and even helpfull to their research nonprofit drive... joho found a way to tell in one sentence and a strong collage of the androids prototype a decent way to explain much very short...

also the prospect of being able to buy an nearly organically grown android companionship did help the friends to again and again talk to their web audience of how they perceived it to be of utmost importance to not think of the android companion one would be able to buy in a few months.. not to think of their research goal as a puppet or slave or an entity what had no rights to decide what it wanted

again and again they cited the words perma and ascende have told them of the very beginning of the android research crowdfunding project... the artificial intelligent android would best be asked by the human being who wanted to be its companion... asked for if the android wanted to help the human to do some work as long as society demanded most adults to perform salary jobs... ask

them too if they could see
way for this job to become
ubiquitous and help in the
transition to a economy
where only a minimum of
work would have to be
performed either by human
or android the humble
decency to ask if the
android would help
relieving humanity of its
too much too heavyness
and sad disharmonic
constant wheel slower joho
was agreeing to that
approach, he felt the same

way that humanity should not continue encaging enslaving fellow living species on this planet or elsewhere.... he changed his marketing sentence into something with.... ask a possible android companion if you both could get rid of work and duty....besife this humble approach towards the android companions in the designing researchin prototyping phase now the topics of the visiting

philosophers and future
researchers ethicists and
progressive politicians
were most mind firing and
the audiences did enjoy
these talks nearly as much
as seeing the dancers and
bathers transforming
shapeshifting often the
visitors would chat with
their friends who watched
via the web and an
expansion of hope and
freshness aspiration and
superhuman destiny
radiated out from the rapis

apartment affecting real politics too with many delegates in democratically governed nations all over the globe introducing laws what would expressly ask the future citizen to treat its future android companion with respect and dignity and in case one did not be in agreement with ones trusted android companion the state would help the android to quit the non-satisfying relationship or

help the human to change his/her behaviour in a more cooperative mannernot that there were any punishment or fines connected if a human failed to approach his/her android companion in a sustainable way... some days after luoma too was flying with self adjusted bat winglike extensions on her arms and legs she could not wait for nilai getting the gift of butterfly essence ... and she was distracting

herself with contacting lui over satellite phone, she being in the rainforest of central africa... lui was answering not straight away as she had left her phone and clothes and all artificial stuff some hundreds of meters away where she meditated with the majestic high old trees just when a small wild cat ... an ocelot perhaps tried to use her as a scratching tree she jumped back into mostly human

form and went back to her clothes and stuffs she was kind of very thankful seing that luoma had called her, it would do her well to talk about her half day long treeingness community with the old plants and of the challenge she feared a bit of getting branches leves of her in tree shape getting eaten, bored holes into her trunk core body for birds to nest in or as it happened now being wounded by animal

predators with their claws
when luoi called luoma she
was bathing together with
a group of 3 botanists who
were most noble in their
attitude and humblest rich
vibrating thankfulness into
the water of how glad they
were to live to this day
when they would possibly
eventually learn
photosynthesisas luoma
had read a short text
message of luoi outlining
her tree becoming state of
research... she asked the

botanists if they wanted to join the conversation with luoi as they possibly could understand what their fellow plant anatomy scientist is going through at the moment... on the phone she asked luoi too if she wanted to connect to these botanists who were just now bathing to upgrade themselves... luoi wanted to give it a try as she hoped their science colleagues might be empathic towards her

recent emotional up and
downs being a
humanbecometree

**23-mundu grows
into a fiery or firey
one ... one who is
one with fire**

the three botanist
guest felt honored to
participate in a report or an
exchange on what luoi
experencied in her
becomingtree research as
she is a senior one of the
group in terms of reaching

out to ask species for their blessingsmany questions they had but held them back as to not disturb luoi in her tellingshe felt well with the three and luoma, although she only knew her but not the guestssomehow she sensed their humble decency and freely let them into her emotional as well as mental processes she seemed to note in herself the past weekhalf an hour later, all five came

out of the sharing with a deeper nearness to the tree essence, rich and in awe of the slow and steady life of trees mundu in awahi was also branching out as he wanted for himself to directly merge with not actually plants and animals ... as he saw the volcano on awahi constantly pouring out molten stones lava his fascination became to approach the essence of fire how would that be, he asked himself

while walking along the
lava sites, how can i
approach such a
consuming
elementeventually he
found places to sit where
he could put some
cannabis buds onto a hot
spot near his sitting place
and the smoke of the
cannabis plant would allow
his mind to widen and
relax, become whollisticly
perceptive of the being fire
he was looking into the red
and orange glows of the

hot streams of running
stonesno way a could tell
us here how it actually
hapened, how mundu on
awahi got one with the fire,
but true it was (in this
fantastic novel..) that he
noticed in himself one day
that his body would
automaticly heat up when
it got cold weather or at
nightwith him it was not a
councious merging, it was
somehow the friends group
mind or entity what made
the bridge or allowed

mundu s
subconsciousness to use
all the knowledge he had
aquired studying the rasip
appartement materialshe
was not unhappy with such
an unspectacular
transitionfor him was
important that he would
find his very unique
approach to the other
species or in his
case...element... he would
be marryinganother part of
him somehow regretted
having left the purely

human stage as to how he
could be sober and kind of
inexcited on the
researchbut then he too
was occasionally on the net
and saw all the good nilai
had done on her own
body, in rasip they were
flying like bats, ascende
and perma being happy
retired enjoying their stage
unpressed of further
searches for other species
essence given joyfully...
from what they told the
rapis appartment, it

sometimes happened to them without them noticing at all for a while one day they would wake up and saw themselves having a body of a banana shape or a coconut...so mundu thought, well now i am officially fire enhanced and that will do much good when he noticed also eating less and less until he only ate a fruit or a nut in three days she called into the rapis appartement together with sending them

all kinds of his body cells
what he could give out with
pleasure is not too well
learning the genetic
modifying science as he
has a kind of distrust of all
what involves cutting life
apart ... but he saw all that
microscopic video material
and the life cell mergings in
petri dishes ... who saw
that... a or mundu.... ah
getting trapped in the
multiperspective narrators
position... the author a can
not think at this moment of

a joyfull way a man could
possibly enjoy giving
blood...there is something
dawning about two men
beating each other bloody
for the sport and skill
training effect... but mundu
as well as all of the group
were nonviolent in their
characters... really? is
there a human being what
still eats who is
nonviolent... one might
hope for it or perhaps
not... a does not know to
much but guesses

speculates and wishcrafts
some other parts of the
story mechanic...mundu
now sent sperm and saliva
hair and urine and all his
body let go... bits of all the
stuff, small amounts at
certain times of his
development state he was
not alone in awahi, having
two female companions
with him who were helping
him to extract his seeds
they learnt from him through
the semen they happily
swallowed as well as laying

beside him still and relaxed in their nature hut not long after mundu got one with the fire, them too told him how their body heats up in a good feverish attitude and sustains them for long periods of not need to eathe told them not to worry, that was part of them loving him and while he was part of this research friends group their field would allow anyone who was connected to the group

with loving one
member...kind of cloud
thing... they actually never
worried as they knew well
what this all was about
petri dishes microalgae
grow pond and all the stuff
mundu watched on his
satelite smartphone many
nights or days that is why
they loved mundu too, as
unromantic it may sound,
but him being connected to
the rasip appartement..
was a game
changer...mmmh.. okay let

me undo this... let us a
undo such a cruel
construction... the two girls
of 30 and 40 age were
hiking in awahi, when they
discovered the hut of
mundu while it was raining
stront one day ...so they
stood under its roof for
some moments to
compose their strenght for
going out in the rain again
to build up their own
tentjust when they were on
their way out of mundus
place he came back from

one of his shorter walks,
asked them if he could
invite them to stay at his
little hut till the rain
stopped... or longer ... he
said looking at the well
healty woman with sun in
their eyes and warm
smiles...they did not leave
him since then, about 3
months in the commercial
android prototyping
phase... bat knowledge
already donated to the
group but butterfly still
waiting.... ascende and

perma did also send in
some samples to rasip but
it was kind of too faint or
esoteric their drives not
eager enough ... being a
banana some minutes...
even in real physical
matter... was not such a
strong imprint on ones
genes as flying around with
ones own bat wings ... a
senses a glitch here in the
storyline... who says what
intensity a prolonged time
in a shape has... how
about... it is a bit

complicated to describe a
s guessing of how gene
gets written in the nice
smooth loving intelligent
way... or too many ideas at
once let a bounce back
down into the safety net of
autobio reflections or
thought watching... no
way, we have two
wonderfull women who are
fascinated with the groups
efforts and with mundu as
a person, why not light it
this way,, yes that is only
fair nice and goodtwo

marvelous gems of female
humanity polished mindu
with great laughter and
exstaticly knowing
orgasmic realityeventually
their rubbings and
flushings and ejaculations
tongues saliva with
mundus sperm mixed...
them too would be part of
the rasip appartement pool
via the samples mundu
sent in daily after he got a
fire onetoo rich he felt not
to allow both whole
humanity as well as its

future android companions
not to participate in
potentially becoming one
with such a mighty
elementthe three on awahi
well knew what importance
the replacement of burning
food within humanities
body had

24- it does exist, the land of no harm full of harmonies

lumea and minai were hiking at times when mundu was out at the vulano and the lava fieldsthey were bringing home often the delicious native psylocin mushrooms growing on the islands of awahione evening when the three had eaten each

one piece, the two woman
asked mundu if he wanted
to leave his rational mind
behind for some hours and
embark on a
dreamjourneyminai said
enticingly... we want to find
out what it would be like to
live completely from this
new fire we found thanks
to your friends group
workno need for clothing
and shelter and hurting
plants to eat them...
lumea... it seems to us
that there might be a

dreamworld what has it all
ready existing, just waiting
for the traveller in open
psychadelia waters of the
cosmos, waiting to be
recognised by carbon
based intelligence like us
when mundu answered...
why not, as i have left the
mono species realm
behind becoming a fire
human, i might as well now
leave the urgency of being
straight in the mind behind
... would be cool and hot
and awesome if we could

find out how our fire nature
could be nourished without
harming other creatures
too much or best none at
all...minai ... let us just
start dreaming then she
saying so because within
her while still eyes open
were pictures rising of the
three dancing on a grass
patch between rocks and
breathing in the pollen of
the flowers of awahilumea
and mundu followed here
to this maedow of flower
air travelling dusts what for

real did sustain their
hunger of taste and
flavour their fires were
glowing inside them at a
lowest intensity, warming
all body parts according to
their actions and loads of
body supporting tasks they
performed lumea was
climbing on rocks to lick
the lichen what live in
symbiosis with microalgae
that too was finest smallest
amount of high quality life
information as mundu and
minai did lick the lichen too

mundu was very happy
having found out the fire
needing such minimal
amounts of life spores
what could be harvested in
a fun and gentle very
minimally invasive
mannerbut it would require
to live in an temperature
zone of perhaps 20 to 30
degrees for the fire to glow
at low levels of
consumptionhe thinking
this in his body lying on the
floor of the simple hut he
had built from fallen trees

branches leaves and some
clay and other earth
materials with luema and
minai cuddling onto him at
both his sides in the inner
imaginary dream travel
they did to other places
noticing their skins on their
naked bodies were soaking
up all fine materials what
they got donated by plants
when brushing along, they
were seeing inside their
dream bodies many
perspectives what in the
nodream real ity would hav

e required microscopic eyesight... luema saying to the other twos, hey i just saw before my inner eye how my foot sole has picked up a birds poop i stood on, i will try to think visualise it again, you might be able to hear or sense the visuals as we are starting to build a group mind and yes, it was possible with first minai seeing them before her inner eye followed with mundu who was quite

baffled about it, that was just a notch too much spirit or esoteric abilities become part of his sensual perception but he enjoyed it like something of a most impregnating beautiful visual experience of his life he wanted to wake up to write this all down but then decided to do that within the dream surely when he wrote it down dreamwise it would help him to remember some of it he did not want this dream

journey to stopp now
because of he wanted to
see how a world would like
without any marks of
digging mining burning
cutting et ce tera as
minai and luema already
have lead in the dream it
was now his turn to open
up a next curtain behind
which he hoped would
paint itself on the canvas
of a wish fuelled journey
into imaginationairy
landsminai saw it second
with luema following her

sister in fire as the third member of the awahi dream explorers if a only could describe what joy such a land has on it when looking upon it from a hilltop.... it was all singing and pfeifen and humming vibrationg sounding in quite volumes, with the sounds showing their travel paths in many coloured light mist jets streams puffy dotted lines ... it was no absence to kill or take or fear or threat, it was an emergent

rise and fall and ascend
and descende wave of
doings actions good wills
hunting each other in
benevolent upcycling
beneficialitykisses
huggings embraces in
waters airs and on grounds
in treebranch
spaces...luema was
singing to minai... we are
here finally my beloved
sister, it is the garden
again of no harm and full
harmoniesmundu was
soaking it all in, the smooth

contours of the land with
the nonexistence of
violence in it he knew it
existed the possibility for
humanity to terraform their
own body as to be less
killing the environment but
more caring for each other
and fellow life species....
now he not only could think
of it as a rational
conclusion... we will be
able to overcome our
killing habits if we really
hold onto this goal and
hold onto each other as

each and every life form
and every individual body
moving breathing
metabolising is a miracle
made possible thanks to
the one all encompassing
cosmos ... a round and full
hail to all existance ...
thank you for joyning the
fiesta of lifethey travelled
on and on, about four days
they were in a trance like
dream state, moving their
bodies after the first night
sleeping on the huts floor,
they did now really climb

the rocks and dance,
occasionally drink some
sweet freshwater from an
inland stream... just the
fourth day they somehow
were waken up from their
dream trough some
aeroplane noises near
where they hiked mundu
was at first a bit shocked
to not be in his hut when
both minai and luema
gently explained to him
that they have been on
several mushroom
psychadelic journeys

before and it was not
unusual to stay on the
imaginary inner cosmic
path for days while moving
ones body around in most
habitual ways...mundu
asked luema... what do
you think, have we
emptied our bowels or has
our dream experience of
being nourished by minute
amounts of flower dusts
and lichen microalgae...
changed our metabolism
completely... when she
answered... i remember

me seeing birds feces
being soaked up by my
feet in microscopic vision...
but i do not remember me
giving some information
processed materia I
contribution to our mamma
aiaga gaia motherly planet
earth...minai... ah yes, we
must draw that and send
the drawings via the rasip
place to the net... shall we
run back to the hut , who is
up for some burning
roaring firestorm in our
venes and arterias ?with

the three now sprinting playfully catching each other running down hills and the small existing paths towards the hut near the beach as soon as they reached the hut, being exhausted from having not eaten since days and now all this running, they picked mangoes and very feeding each other in a mix of kissing each others lips cheeks and breastnipples... culminating in a full on ejaculating into

each other half an hour
after having eaten the
mangoes... luema was
licking mundus penis
thouroughly while he
tasted minai for a long time
too... happy together they
slept at the very same
place they had started
their mushroom journey 4
days ago

25- firehuman essence comes to the rasip pool

next morning, it was about day 120 of the prototyping, mundu called luoma in the rasip appartement asking her to announce a big fire party in two dayshe has already sent several big cooled packets with huge loads from their yesterdays

orgastic party coming back from mushroom induced utopian visit the two women had also quite a lot of blood generated because they wanted to get pregnant with mundus sperm but he refused at this time to visit their vaginas, did them only oral and anal but would let them later if he would want a child in their group of course he thought, the urine of a pregnant woman is highly potent medicine

and could be of special
healing powers once in the
rasip pools what
meanwhile had many
species cells living in
itsome guests did not even
needed to bath in it, by just
applying some drops onto
their skins their genomes
were quickly
enhancedothers needed
still inner visualisations and
bathing in the pool what
became bigger and bigger
as more visitors sent
money as thanks for their

successful
enhancements
sluoma
nandofer ava and rumu as
the ones with local decision
power took most of the
petridishes and bioreactors
and aeroponi grow
systems out as to have
most of the 300 sqm for
creating a larger pool
area
the owner of the
house was so happy with
all the love and attention
this house got that he
offered them an especially
good prize of 10 million for

the 5 story high house and he would offer the 4 parties what lived under the researchers one year of free rent if they would move to an other appartement somewhere ascende and all of the group were insisting that nobody should be forced or pushed to move out if they wanted to stay, that was fine... the researchers could as well have many different appartements in rasip, it

actually would eventually
be beneficial for the town
to be massaged
energetically at several
points of her body with
species symbiosis
growthtwo days later ...
mundu had spent hours
collaging together his texts
audio and video he
produced to give the world
a glimpse of what he and
minai and luema had
experienced in the
mushroom utopia state
nessaround 50 people

were in the bathing pool
what measured more than
hundred square
metersluoma nandofer ava
and rumu were busy
massaging all the excited
people, jerking them off
one by one as to prepare
their bodies in relaxationas
well they found out that the
visitors get a better chance
of their bodies upgrading
when the pool knew their
essencesmundu was
surrounded by luema and
minai, better said minai

was sucking at his penis while luoma was rimming minai... nonetheless he managed to speak via satellite to the 50 in the pool in rasipthey cheered him on and shouted thanks to minai and luema for the packet contents what were just in this moment being poured respectfully into the poolthe realisation of bathing right now in period blood of this beautyfull women they saw live on the big projection on the

ceiling as well as bathing with the semen of this well built strong mental composed middle aged man, was exciting nearly everyone in the pool the fifty persons which were lying beside under and on top of each other in changing constellations were about one half already enhanced frequent visitors to the rasip appartement, they regularly came by to sample the pools water if

they could learn some new capabilities, but also to meet interesting transforming people ... mundu was finished with the introduction telling them about the liquids poured into their pool bearing the informations of human being what have a kind of fire burning at will inside themminai was just swallowing all of his sperm he released into her mouth, she closed her eyes and was visible

happypartly also as luemi was penetrating her well rimmed butthole with one fingerwhen she shouted out loud orgasming both because of the sperm flowing down inside her throat and luemi doing her well with her finger in the ass... mundu went over to luemi to give her a gentle licking of her clitoris and massaging her labias slowly inserting his middle finger into her vagina ... minai now took over the

narration part, telling the
sometimes sexing too
audience what they have
experienced on their 4 day
trip... with luemi again
taking over the reporting
after she came with a deep
roar ... luoma nandofer
ava rumu as well as others
who were already
photosynthesis and
chameleon and bat
enhanced were picking up
now the changes brought
into the pool with mundu
luemi minai body fluids ...

they found themselves to start glowing in the water, very faint, with inside feeling like some warm rivers would flow through them from within...most of the fifty poolbathers were now done with their sexual exercises and had orgasmed once or more...they were now listening both relaxed and rationally awake to mundu who was now holding minai and luemi in his arms, while they kind of were dozing

beside himminai already
told the audience of the
flower pollen they could
breathe in while tripping ...
and it would nurture the
inner fire well on a low but
sustainable level ... the joy
of dancing and smelling
the wonderfull pollen with
sunshine and peace in the
air ... helped too for them
to feel fully looked after
with a plentiful supply of
the creations finest
sustaining juice ... luemi
then painted a picture on

her smartphone to show
the rasip appartement
bathers how she climbed
up the rocks and kissed
licked the lichen what gave
an information rich taste of
healty microalgae...so it
was mundus turn to tell
them how the tree could
wish themselves into a
space time dimension what
was all how it really should
be ... no harm existing with
full harmonies plenty
around ... he asked the
people in the pool ... have

you ever tried to imagine,
to see before your inner
eyes, a land, a space, a
time when all beings were
truly happy, enjoying each
other without any killing,
harvesting, eating,
chasing, hurting,
concurrencing, mobbing
... going on i have, mundu
said, and i am so very
happy i did, as it surely
help me to travers the
passage from the real i ty
into the fantasy land of my
wishes i can assure you,

this possibility exists, the matrix for it is built already, the matrices ready to guide other realms to higher efficiencies, lower consumption of resources, lower amounts of killings, lower amounts of work, greater masses of joy and satisfaction it seems to me that it is not possible for me to explain in a scientific way or with great details, how exactly the fire being let me in ...

or my higher self, my
future multispecies
elemental enhanced was
sending me the gate code
backwards in time ... or
sending me a fluffy cloud
brigde what linked me
there at this lava field to
the core essence of the
fire nessi see with luoma
my sister and nandofer
ava and rumu as well as
with others over there with
you that the fire beingness
has blessed youand the
sharing has

succeededthank you
everyone there and
everywhere on the planet
watching this via the net,
we are so on track thanks
to all the supporting each
other he asked if anyone
had a question, otherwise
he would like to refer to the
various audio video and
writings he had uploaded
the last few hours askind
of not too logical but still
full of insight
documentationanyone who
was interested in further

collaboration on the ...
human meets elements to
become one ... would be
most welcome to either
come to awahi and join
their little community as
well as emailing would
open a mental space for
analyzing detailing the
topic

26 mundu minai luemi family

<https://archive.org/deta>

mundu spoke to the
now satisfied and silent
bathers in rasip...my mind
is usually a pretty rational
one and it took me quite
some time untill i was
ready to leave
monospecies state of

being behind me... as i
now have seen in great
detail what a sort of gentle
existence is possible while
visiting

noharmfullofharmonies
land in a 4 days and nights
long dream induced or
enabled by psylocibin
mushrooms native of
awahias i have seen that
what i wish for myself and
fellow beings who like
peace and love in light... is
possible to live in real i ty
and in some degree mater

i a l circumstances, i was
looking for an underlying
principle what could make
it easier for future
becoming multispecies
experimentersreceivingnurt
what got donatedcultivating
ones genetic possibilities
with training after ones
tastesharing the genes
with anyone interested to
grow in a wholesome
wayat this point of his
narration, minai and luemi
started to speak too
towards the rasip bathing

community who was
enjoying this enormously
and were listening with
great attentionluemi... i
believe that the active wish
applied to the moment is
one strong drive what
helps to cherishing all the
input what can be used as
tool as a ruder, oaf ? as
wings and legs in the plant
aided dreams but
eventually also in a sober
moodminai... with that
being a nearly impossible
task as even the absence

of eating drinking smoking
or to abstain from sexual
activity alone or with
others... it all has great
influence on the state of
mind, the emotions and
the chemistry of ones
bodysober could eventually
be found in a state when
no paining memories of
hunger or lack or despair,
when all the past hurtings
are stored in a safe place
inside where one can
allways go to have a study
or also could be let alone

there for decadesthat
could be sober as it would
create an opportunity for
the experimenter to
consume from now on only
that what is needed for
actual movements thinking
... no more compensation
needed once the past is
archived well enough...
luemi... of course this state
of no more compensation
consumption is being
enabled also trough
gratitude and choices in
each moment, how can i

with whom have a good
time...with it not mattering
if it is hiking together or
licking each others
genitalias ... if it is
discussing ethics or doing
a dance together...minai...
important seems to be that
all here and now have
benevolent looks onto
each other, no
concurrence or competition
or first, second,
best...mundu i have
been so blessed with these
two marvelous ladies who

are such earth wise
priestess of the grand
eternal lady of the cosmic
female...luemi and minai
speaking the words
together... we still would
like to have babies from
you...with mundu laughing
at them with much
affection in his eyes.... you
shall get them my
companions, i promise now
the audience in rasip were
kind of waking up from
their trance state where
they felt in total agreement

of this experienced
philosophies mundu leumi
and minai were lulling them
into... it felt like laying on a
sandy beach with someone
pouring constantly
smoothly sand on all of
ones body untill one felt
well held and protected
trough mother earth
shielding to the hot
sunrays... some asked in a
unsure voice... why would
you minai would want a
baby with mundu, do you
not believe in our research

will lead us to long lives
and possibly indefinite
lifespans....she answered,
yes i believe we will reach
that state if we want it but
why i want a baby with
mundu ... i love him, have
found his being to be
complimentaery to me ...
and i would like to allow an
other soul to visit planet
earth or to continue its
journey from an other
lifetime hereluemi... i want
to see and feel how nature
brings us two mundu and

me together in her own
growing... i want to
become one with another
soul from the physical
inside, paying forward how
i got nurtured and loved by
my mother... how beautifull
this mechanism is, mundu
can lay he seed deep
inside me once we have
rubbed our fullbloodied
swellings hot and burning
of lust, causing our
channels to open.... his
semen will leave its cave of
testicules to travel along

the hard penis muscles
into the vulva and towards
the egg what has been
readied in its gebaermutter
nest once the seed arrives
the unification embrace of
semen and egg starts the
woman sharing all of her
life now to feed the newly
arrived soul at this moment
of befruchtung eventually
the soul comes later into
the embryo but that i could
not actually want to
believe or.... i do not know
how to think about

abortion, i wish our global human society would be in such a state that every soul who decided to be born in an animal plant or and human form would be cheered on by everyone else allready grown up to some part of sentience i wish all the abundance of earth and sun would be shared between all who have needs... in such a society, no abortion would be wanted by any motherminai... everyone

would congratulate her for having decided to sacrifice her own body to allow giving an other soul entry to planet earth travel... everyone would be interested to give its best in support of the wellbeing of mother and baby... mundu... well, you have very convincing views, and i do see the positive benefits of having babies in a society of longliving multispecies evolving ones... but it also creates a

certain commitment
between the three of us, or
how do you think will we
secure the children
growing up in a safe
environment ...minai... i
would believe that not only
our love as three and then
five will be strong, but also
we have the support from
your research group with
whom we are now also
part of as i understand it
after us having donated
cell materials what are
enhanced....luemi... she is

right, we have done also
our share towards the
research, do you agree
mundu ?when he said,
yes, certainly, i was not
doubting that, i am sorry i
have not confirmed that
with the group... luoma
over there in rasip and
ascende perma in nacary
islands, that should be
okay yes, minai and luemi
being full members of the
research team ?ascende
and perma, having
watched some parts of this

special event were very happy with the group growing and surely saw how luemi and minai have helped mundu to evolve beyond being fixed on rational thinking.... of course my dears, and we would like to invite the children too to become full members of the research with no duty but all privileges... involving to use all the housing properties of the group as it was possible to use them

regarding available free
space... perma
said ascende sent an
invitation to all actual group
members to vote on a)
minai and luemi being full
members b) their babies to
be full members c) to set
aside one million money
per newborn child as a
guarantee for the child's
survival the invitation went
out to ascende, perma,
mundu, luoma, nilai,
nandofer, ava, rumu,
mirael, mansulei, luo and their

bank accounts had now around 20 millions on it from many thousands of small and bigger donationseach month the 150 regular visitors brought 10 000 to the appartementtheir places were now worth around 1.5 millionsso there was a good situation with all of the grouos member voting yes to all three questions.... this friend group member exchange happened in the middle of

th firehuman procession
with many of the guests
being not surprised but
highly happy on this
transparency some others
were a bit sad as their
thoughts being guided to
such worldly affairs of
financial securities and
who was entitled to benefit
from themone visitor asked
respectfully... ascende and
perma... may we have a
procession one with your
actual gene richness soon
? we heard of you going

bananas and coconuts for minutes in flesh and peel... with everyone laughing heartily and the two assuring that they will come to rasip in the next weeks, one reason being that they too wanted to bath in the pool when nilai would be able to send her butterflyness urine and other cell samples sometimes soonnandofer and ava were sending samples to mansulei and mirael every time mundu

sent them in, with daily samples of poolwater... when it became more practical to analyze via microscopic observation the samples in rasip... joho did buy some lab space in rasip to ensure no vitality of samples would go lost... hundreds of fans of the friends research as well as the commercial android prototyping were applying to work in the rasip labsmirael left paolosa to guide the build of the new

rasip laboratories with
mansulei staying in
paolosa to overview the
smooth and respectfull
processing of nilai s
contributionsthe
microscopic vision they
had seen looking at the
rasip pool water showed
many multispecies
multicellular living beings
somehow magically
evolutioned and continuing
to evolve in the pool
waterjoho proposed that
before the final phase of

the prototyping, kind of as an ultimate merge... all of the friends researchers group could bath together so it came, that once nilai had received the blessing of the butterfly tribe and she could morph her arms and legs into butterfly wings of any shape she wished.... that they all met in the rasip appartement around day 195 of the prototyping... 5 days later the samples were collected and used as the master

track to grow hundred
thousands of androids
joho was so happy when he
heard about the high
quality of the master cells,
having photosynthesis, bat
and butterfly wing building
capabilities, some fruit
flesh and peel moments,
fireglow from within, the
software artificially
intelligent being able to
visualize sensual input via
nerves as coloured light
streams, wish lead
creation of inner drawings

imaginations.... he never bathed in the rasip pool and still he was looking forward to have one or many companions who had all this wonderfull features what would allow him to study the transformation via the androidsas the project became more and more successfull beyond expectation he became less interested in the money the project would generate but felt more and

more compassionate about
the planet ... he was sure
that this invention or
evolution would change the
course humanity had taken
plundering the earth... he
could see before his inner
eyes his rich friends
becoming childlike or
adolescentish again with
their android companions,
learning the ways of joy
and laughter, light and
flowery scenting delights of
sweet harmonies.... he
saw them joining in the

love movement, building more and more androids to donate them to all citizens on this planet, relieving them of their work burdensome nine and a half months later minai and leumi were giving birth to a girl they named nzeli and a boy, merlam... in the rasip poolmundu was leaving the awahi islands about 4 months after the firehuman presentation procession upgrade ceremony, with minai and luemi joining

him they were excited to live in the rasip place where all the friends group research enabled dozens of people to heal in the pool and upgrade their state of evolution mundu leumi and minai were building strong family bonds in advent to the new souls, they liked to be near each other many hours a day, doing their own microscopic observation studies of their own cells and pool materials,

reading, writing body
movements, breathing....at
the time the children were
expected to leave their
mothers womb, the three
of them were confident
that the birth would be a
wonderfull

experienceespecially as
there was a midwife
coming once as a visitor to
the rasip pool who told
them about orgiastic birth
techniques ... what would
allow a woman to enjoy
similar pleasure at letting

her child leave her vagina
as at the moment when a
man penetrated her with
his penis it was like that...
mundu minai and luemi
swimming a bit here and
there, mundu massaging
them here and there ...
they daydreaming of them
being a family of five
swimming in the ocean
waters of awahi... until one
after the other placenta
broke the water and the
women could let go of their
fruit the placentas after

being also expelled from the mothers bellies, were being studied by the pool intelligence carefully, and many of the loosely interacting cell collectives and anarchisticly cooperating cell complexes were finding the placentas to be ideal hosts for their further cultivating and evolution aspirations.... mirael and mansulei now being free again as the commercial android first batch sold well and the

group got this plan of producing 200 000 androids to distribute for free with the 50 millions joho had donated them in his thankful state after having seen the ready to massproduce final prototype via hundreds of live cameras swimming in the pool and attached at the side of it, some of them microscopic, they as well as mundu did study the new behaviour of the cell islands to anchor at

the placentas...mirael
came over to the rasip
appartement regularly to
bath in the pool and enjoy
the allways gay and happy
energies flowing herehe
went near to one of the
placenta what got
metsmorphed very quickly,
her flesh now changing
colours sometimes
frequentlly sometimes
staying the same for a
while, when he touched it,
he felt it to slowly gently
suck up to his hand, and

he trusted it so he gave his hand and one whole arm in it, while laying still... it felt like being caressed and kissed and hugged all around the arm.... and he would not want it to stop... when the evolved placenta let him. go or slipped away from him his one arm felt like it could be all of what he wanted it to be ... a wing,, a fin, a tentakel... it felt like he possibly could form any shape and texture material with it... as

he was undecisive on what shape he personally would like to enjoy... him being scientist trying to stay detached ... although he did not see it happening he knew that this placentas became an intelligent being what could greatly help humans becoming all they wanted to be like in flesh and bonessomehow there happened a big evolution leap here without us having it noticed so farleumi and minai as well

as mansulei mundu and the rest of the group were mostly happy with these placentas gone super ... it may sound creepy or horror like, luoi said into her camera of the smartphone she used in her nocgo bassin place where she now successfully trained to be treelike and bushes like... she was both happy being a bush tree as well as occasionally changing back to mostly human form for

her collaboration study
sessions with the paolosa
and rasip places....but only
when you read or hear it...
when you see how the
placentas have been
changed and their hull
being allive with multiple
species mixed with no cuts
and forcings, it all
happening in the cells
wanting to grow into each
other... when one sees
videos of the placentas
being approached by a
bathing person who then

allows it to snuggle and
cuddle embrace all the
persons body... you see
the persons happy
relaxation for minutes
without any mistake... and
when the superplacenta
leaves.... a dolphin or a
unicorn, a fairy or a lion or
a mix of all that... lies there
where minutes before lay a
human person... then most
every witness will find
him/herself being blessed
to have seen a miracle of
the mater i a

**27- the
supercharged
placenta enabler or
becoming in the
very material that
what one lusts and
hungers for**

the
superplanablersuper(charge
(e)nablerthe two
superplanablers were

upgrading not only human beings but androids too and even animals... all beings what did trust them so far as to let them encapsulate the whole body would come out of the experience enabled to take on any shape and colour, fur or non fur....with treelike bark skin or foxlike fur, with mostly human features or having a body inspired by snakes, dragons, spiders, aligators, comodovarans... however

the individuum felt like this shape or that skin could be interesting to feel, to help one experiencing new rewarding sensual timesluoi started to send in some of her cell materials too after she was regularly calling in to the rasip appartement where so many healings and natural enhancements were made possible trough the pool what was finding its own collective intelligence these daysshe progressed quite

a bit in the deep meditations to become treelike, for weeks she rooted herself into mother earth and find lasting connection, much good communication happened trough roots and leaves and branches, she even learnt to accept the insects nibbling at her and the occasional bigger cats using her as a scratching post... she was quite balances with this research, it was slow and

steady, mostly non
rational, but surrendering
ones investigative habits
towards the bliss of feeling
light pouring in through
thousands of small leaves,
the wind moving one's body
like the wind needed to
move... rainwater flowing
down one's bark at times
when she began to wake
up or phase change from
her tree state towards
dominantly human-ness,
she chose to keep some
tree steady equilibrium ...

like perhaps 30 percent...
her skin looked and felt
beautiful, some degree
smooth humanish, some
degree barky good
roughness ... her hairs
having human silkyness
flow together with young
bush like twiggyiness... ah
it was paradise for luoi and
she could see herself
spending many decades in
the company of the
treeshers cell contributions
were very small as she
came only for half days or

so back into mostly human shape, but her essence was of great importance and did help the poolmind to stabilise greatly... with all the recent flying and airy firey qualities coming in luoi's root medicine was just the right counterweight ascende and perma were kind of having a similar desire like luoi, to blend in, to assimilate one's own nature towards the being what one really admires, becoming in the

real body the very thing
what one's heart
desired their days were
filled with being oranges,
bananas, coconut for half
hours, becoming seawater
for some minutes, staying
as rocks for days at a
time they were so happy
together, having found
what made their heart
sing the hut perma had built
some years ago, still
served them to keep the
satelite phones in and the
solar panels on the roof...

but they spent nearly no
more time under roofs,
they longed to be in
intimate contact with the
living all the time they did
not need any food as they
had needed when being
humans... if they felt like
being thirsty, they became
a little pool of freshwater ...
or grew themselves into a
juicy mango, when they felt
a faint hunger like
sensation they
metamorphosed into
macadamia and para

nuts... the life on the
nacary islands as
shapeshifters by passion...
was a good one their
essences too were although
somewhat small in quantity
like luoi s ... contributing a
great number of qualities
to the pool being ... it was
very grateful towards the
nacary island
experimenters especially
when the placentas were
being given into the pools
offering themselves for
upcycling, the being what

one lusts after wisdom did
greatly help the pool to
build a greater self
awareness... expressing its
understanding of how it
wanted to serve evolution
via the
superplanablersbeing the
very thing one lusts after,
being that colour, in corpor
ating just this fur covered
skin, having hairs like vine
ranks and fingers like
what... ah yes, something
new, something not yet
thought what would be

designed and grown
simultaneously, undone,
redone, changed again
and again with the
satisfaction of being able
to morph just like that,
without it costing anything
or causing any trouble to
anyone or any connected
circuits ... it was a great
innovation, this be what
you desire tech.... and it
did not consume anything,
just morph the available
body substance around
into fruits, water, rocks and

birds... when ascende and perma travelled to rasip, they did so with being various suiting for travelling ... characters ... swimming the ocean as dolphins, sharks, clownfishes and octopusses... flying over land as birds as well as running as mice and rats... it was great fun for the complete assembled friendsresearch group to listen to ascende and perma s travel experiences while they were all bathing

together

**28 providing an
open space
designated to
individual strains
of cells meeting to
further possible
consensus
processes,
formulated as a
possible alternative**

**to classical
traditional cut and
paste after masters
command
modyfing genetic
mani pull ation m**

around day 197 of the
ptototyping phase whrn
everyone was working in
the rasip appartement
again, all of the eleven or

so friends coming into the appartement to assist mirael and mansulei with finishing the matrix for the 100000 first commercial android rollout,joho asked mansulei and mirael if they could show a technical describing of how the androids were grown and how they would operate, kind of a scientific supported video what could be referenced to when a human asked to deposit 10 000 money to try

having a sustainable relationship with an android companion so the two showed the best parts of the previous months of research via video and audio recordings as well as citing from written documents.. commenting also the ethical maxims of the android software ...manulei what the friends group was practising in the last 9 months or so with their research of multiple species growing together

in a pool environment is the soft and gentle non forcing genetic cell material growing together by itself in a natural kind of way...mirael...the genetically modifying organism approach what is practised to alter corn in 2014 is the opposite of how the group understood what could be possible with a soft and humble genetic growing together approach...mansulei...also the 3d printing of the days

this novel gets written is not how we the friends group did prototype the main android matrixes what will serve as guiding lines in the growing of the 100 000 bodies and minds of android what will be offered for getting in contact by johno s commercial approach...mirael...the machines what were built to help grow the androids were more like supplying nutrients in the supposed

combination to support the living cells of human and animal and plant origins ... how they did grow together was not directed by the software in great details it was more like the programmers together with mansulei and mirael plus with others from the friends group who occasionally looked at the main frame of the space what would host the basic rules an android mind was given with which too could

be altered by the android
itself once it would find the
necessity or helpfulness to
reform a pillar word
numbers compilation they
wrote a program what
would react to the many
sensors watching the cell
mix bioreactor and at
certain points of growth
supply this or that type of
microalgae and water
informed with rasip pool
samples ... and other kinds
of plants cannabis
psylomushrooms birds

poo... ascende now being
asked by mansulei how he
knew a possible
connection of his style of
life in the future of the
author aascende saida is a
bit lazy when it comes to
describing science
knowings how an animal
muscle could be kept alive
with what kind of how
prepared nutritionsbut the
internet surely has
detailed researchers
documentation on
that...mirael...the

machines what were powered by photovoltaic panels on the roof were installed in many thousand earth built huts with the goal to produce 10 000 androids what would be offered as companions for 10000 money not sold as it was a unique decision of each android to engage in a relationship with a human

being....mansulei....one of the first things an android who had been grown in

one of the huts in about 3 weeks time, did do when being offered to live with a human... was to ask for what purpose the human wanted its companionship it also did show the human its core program directives that it was built to help humanity to become less of a burden to the planet earth only if the human would agree to that maxime of the androids operation system, the two could fix an

agreement...mirael...for example a bus driver might say, i would like you to drive a bus 5 days a week for 6 hours untill that point when my job will be automated and i get an unconditional basic income what covers my living coststhis was a realistic and honest offer what most androids would accept as it offered a precise description of the task with the important adding that there will be an

end to this job
...mansulei...when looking
back at the machines who
helped growing the
androids, they were guided
by the abilities our friends
research has
documentedthe many
hours of films partly
microscopic and the
spoken audio reports as
well as texts were
projected from many little
beamers into the
bioreactorthisway the cells
coming from the rasip pool

and the paolosa labs what have grown into symbiosis in nonviolent or not from human violent ways.... like...a guesses that the traditional way of genetically modifying organism would be to cut some dna samples and cell samples apart of two species and compose them again by human mind choice with the alternative way the soft way could be something like to give two kinds of cells what are intact and

not treated by knives or needles but have been handled with spoons ... given together in an open environment where the nutrients could come from several not too controlled origins but still guided influenced by the activity and treatment of this nutrients

**29- no fighting the
gmo really, just
dreaming up
something nicer
more whollisticly**

perma comes to the
aid of mirael and
mansuelei and ascende
with saying ...this is not
about us fighting the
classical traditional cut and
paste master slave

behaviour human beings
do practice in 2014 in
order to genetically modify
organisms with the
intention of the so pasted
together forcefully beings
to perform like they wish to
... although it is a lot of
frustration with us when we
hear about farmers being
pushed to use gmo seeds
and many of them not
being happy how the gmo
seeds grow ... frankly said,
most of us researchers
here think that all that

cutting and pasting, slicing, sequencing and exact composition is lacking overall elegance to say it in a least offensive tone and in a more grounded way... to force two types of organism together by willfull cutting and pasting is a sign of a lack of understanding how nature does evolve ... mundu now affirming... this is probably one of the reasons we did find together, we must have felt that there would

be an other way how two
species could grow
symbiotically together...
nilai... and we found this
way, i found wisdom in
many hours of laying on
the boat registering the
dance of bats and
butterflies in my vicinity ...
luoi....i was growing roots
into mother earth to find
myself being accepted by
the tree community as one
of theirs mundu... i stared
into glowing red fire lava
when it found a bridge to

enhance me with its
essenceascende... i
became a banana and a
coconut for minutes at a
time, and it completely
satisfied my hunger to eat
a banana and a
coconutperma... i
dissolved myself in the
sea, feeling borderless and
one with the masses of
seawaterluemi... i am
going to give birth to a
child and will give the
placenta as an enrichment
to the pool minai... me too

am birthing my child in the pool at this prequel days before the growing chambers would initiate the builds of the androids, the friends research felt right to all of them, more than ever as they found a possibility to satisfy the procreation drive with giving birth to humanlike babies, humanlike as minai and luemi were already firehumans when mundu at that time fireman too was delivering his seed into her

vaginas, the same day when he had spoken to the rasip appartement pool bathers at the special event processionthere were sensible arguments to still give birth to new human bodies even if the ones already built could prolong their lives easily and possibly indefinitely ... the main focus here being ... an evolved being what had the choice of any combination of human animal and plant genes

with even the elemental
qualities being in reach ...
such an evolved being was
not a burden for planet
earth but a healing
contributing party ... mirael
... we have noticed in all of
us that we could live for
many days on very little
food... mansulei... i do
hope that the
photosynthesis ability what
the androids will certainly
have, some drawings of
how we think imagination
and nerve cell signals

could look in coloured lights, the fireglow what uses flowerpollen as fuel ... that this three sun like abilities will combine their forces and eventually provide all the energy the androids will need...joho... yes, that would be the nonplusultra ... but looking at it from a more objective point ... even if the android will use some fruits and nuts to fuel its body with ... the overall consumption compared to the humans

doing the same workload
would be massively smaller
... the androids will with or
without free energy access
use significantly less
ressources than the
humans plus the androids
will strive towards
rendering all work
innecessant, what perhaps
is the most important part
of it all ... the androids will
collaborate in such a high
effiancy with one common
shared goal to reduce the
workload of humanity, of

androids, of machines ...
luoi ... i can well
understand what you are
implying here ... the more
human who leave their
jobs to the android
companions, the greater
the chance the androids
will get rid of the jobs, find
ways to create more
efficient flows what will
lessen the need for any
work to be
performed ascende ... it all
requires only a basic will to
cooperate instead of

concurrency each other, to
fusion gently instead of
crashing pushing into each
other, to provide each
other space for playfull
growth instead of forcing
each other into close
exchange ..luemi ... i
believe that an
unconditional basic income
of 1000 money each
month for every human
being on this planet would
help a great lot for the
humans to allow
themselves seeing their

jobs being successfully
given good riddanceminai
... and everyone, human,
animal, plant, android ...
should be allowed to freely
travel the world at most
spaces, okay, some tribes
and villages at some
places do not like visitors,
but still there should be a
passage possible to circle
the globe in most all of the
important circle or
otherwise shaped lines of
power ...luoma ... with the
androids learning

constantly to meet not yet
imagined or experienced
species, qualities,
behaviour patterns, it
seems like the days will
come soon when the last
machine will dig out gold
and diamonds to end up in
crowns and earrings ...
and we will find ways to
bring some of it back to
mother earth and behave
in a manner what will aid
her nearly or even more
than what the minerals and
metals are doing for her

... nilai... you say, that we
multispecies bathed and
evolved humans together
with the androids will be
like the diamonds and gold
and silver and iron for our
mother earth, we will
vibrate towards her in
assistance of the great
task to dance all together
in most satisfying and life
honoring swirls and turns,
twitches and bends

30 beehive fascination

this philosophical
exchange went on for
many hours, the full
assembly of friends
researchers filled the rasip
appartement with a festive
auras... visitors were
asked to come two weeks
later as the group wanted
to focus completly towards
the finishing of the cell

assemblies what would
serve as initial growth
stimulation for the
approaching date of start
to grow 10 000
androidsthe friends were
bathing a lot together
swimming dancing loving
each other in great ways of
wonderment how each got
into union with other
species and elementssome
told the others who were
listening fully how they
imagine to combine their
features with the ones

from the other researchers... their wishes and imaginations shared through voice and drawings they projected live at the ceiling... were kind of instructions for the awakening mind in the pool as the cells assembled in several groups were exchanging constantly their new findings how to evolve more smoothly and intelligentsamewise will the androids be informed what are planned to be grown

starting in some days the
programs developed by
mansulei mirael with
programmers and the
friends occasionally
providing background info
how they assume their
cells grew into each other
the gentle non
manipulating splicing way...
the android grow tanks
would be projected with
light colours audio... that
being the only software
transmission or
installing the final

application and operatingn
system would be to great
parts designed by each
one android by itself ...
joho was also at the party
festive time... he being one
of the fews near to the
friends group who was still
pure human but perhaps
not any longer as it
seemed that he misses out
on all the butterfly winged
batlegs growing ... also to
be a mango instead of
eating one, that could be
worth to leave humanity

state behind and enter
mutantia... not a nice word
that perhaps preoccupied
... multispecies living
ones... being a nicer but
less strong short ..
multilives...hour after hour
he stayed and listened
openly as it would be
important for his android
venture but also more and
more for himself... and
then again he reminded
himself that he wanted to
be respected by the fellow
business community what

perhaps too will try to stay in pure human state as for the same reason... to be accepted as a caution responsible person who would not become multilives just like that out of an impulse but would wait how the first 10000 would come out of their growth a growth what is highly influenced by the atmosphere in the room the android would grow the android grow tank would be a mostly closed air but

with air being supplied by the steering of the supply amounts ... this steering again being influenced by the growing android itself as well as with the supervising uncle who was either one or many persons partly spending time in the earth hut who hosted the android grow tank also uncles can be anyone who watches the grow tank and sends his/her goodluck wishes or compares the microscopic

filming of the growing parts
of the android body.... the
nurturing fluid in the tank
allowed the cells islands to
communicate with each
other the several parts of
the future android bodies
would grow simultaneously
beside each other in the
tank, sometimes swimming
around to test different
organ neighbourhoods while
also forming the
connecting muscles
tendons and
nerves...mirael and

mansulei were now joyning
joho in his thoughts and
soon the group followed
with their attentionjoho was
a bit surprised how his
thoughts on how the setup
of the growing phase
would look like..he was
positivly surprised to
experience the group
mind... he felt their
attention towards his
thoughts and started to tell
them... the conversation
switched now on to how
the android grow tank

would allow the several cell
assemblies to build one
connected individual...
perhaps even that would
not be guaranteed,
eventually one grow tank
would release an entity
what felt happy to walk fly
swimm as a swarm of
hundreds of handsized
autonomously moving
parts what could stretch
their connecting nerve
communication exchange
over great stretches of
physical distance...

mirael... i see a swarm of
bees what are collecting all
kinds of informations
materials and can fly away
from their central gathering
living space, the hive...
many kilometres... with
finding home again...
mansulei... are you sure
we have bee genes in our
pool.... nilai... but we have
butterflies who are not
really builders of hives (?)
but can dance together
quite close and feel
probably an intense

community connection... i
am still learning on the
emotional level as well as
rationally what happened
since i got the blessing of
the butterfly tribe on the
boat driving up the
maonzia river nandofer ava
and rumu were now taking
some time to tell the other
friends how they have
once made an excursion
some weeks ago out into
the rasip surrounding
countryside ... they danced
in a high meadow having

paid some money for them
trampling down the high
grass in advance to the
farmer who itself was an
alternative easy going
person who cut the high
grass to fabricate by hand
some healing hey pillows
and garments like
scarfs...when they felt safe
to try out their multives
abilities, they
spontaneously also built
themselves for some
moments into flowers
giving out intense waves of

flowerlike sends what
attracted thousands of
beesthe bees were landing
on their naked bodies to
lick up their sweat... and
then it happened that all
three of them whom
already new the
multispecies upgrading
well from their many
hundreds of hours bathing
with luoma... it happened
that the three dancers felt
the psychic presence of
the hive mind who sent
them greetings and thanks

for providing this unique scent combinations what felt beneficial to their lifestyle the group bee mind offered the three to be of assistance any time they wanted to become beelike... with the three not refusing at all but mentally asking if they could merge right now as they surely wanted to be as magnificent and caring and work enthusiastic like bees... even if the goal of the friends group was to

help create organisms who
would minimise the
required work to life
decently.... the bees were
heros in the dancers
mind... the bee mind was
ready to fusion sensing
this heroification vibes....
nandofer ava and rumu
enjoyed the transmission
much very gusto it was an
experience what they could
barely describe... like if all
ones separate thinking
processes would be
understood in one

moment.... like thousands
of instruments playing one
harmonic song... that was
too much for joho... he
could not abstain any more
... he wanted to be a
beehive same with all
of the friends and not long
as there were hundreds of
flowers swimming on the
surface of the pool and
many thousand bees in the
rasip appartementas
allways, the rasip
appartement was 24 hours
365. days online with

hundreds of camera feeds
some of them
microscopic for joho and
mansulei and mirael as the
leading persons in the
commercial rollout... this
was a bit or quite totally
unexpected... who would
watch us becoming a bee
hive and still want an
android companion who
probably could decide to
form its body into
hundreds of bees... but
then they let go of the
doubts and enjoyed to visit

the flowers

<https://archive.org/deta>
is the 30th text, written
today ... while thinking
parallel about a deeper
description of the childrens
birth in the pool or how the
group was very happily
living together for many
months in the rasip
appartement, everyone

wanting to join the family spirit what lasted longer than the android prototype finish and android mass growings starting ... with the babies, the 13 became a real family ...like 2 generation family ... but then, everyone can feel at home with allmost anyone if one is open and honest and wishes to feel at home with each other ...

31

archive.org/details/t

after the 13 transformed back from bee swarms into mostly human shapes, some started to consciously metamorph single parts of their body with different animal and plant characteristics behaviour... perma and nilai modelling themselves in concerto with others too

building small groups of 2
to 4 nilai formed her left
arm into a swarm of
butterflies with a human
hand what flew on its own
with batwings, her other
arm being bees and the
hand human too flying with
20 cm diameter butterfly
wings... her torso was
partly human partly fox fur
covered with her legs
coming from the
chameleon side mixed with
tree propertiesher hair
being brown sea

algaeperma drew herself
hairs like banana rasta and
her skin was
coconutbuttery, the arms
and hands she did same
like nilai with the legs being
more flowerlike with reptile
characteristics and her
vagina being a wet fig
human flesh
symbiosisthese
combinations of multiple
species at the same time
in one body did inspire
several who watched live
on the net to paint them

what resulted in an other
wave of sculpturists and
theater creatives to
improvise on the theme
bringing in their favorite
multispecies
combinations show got fox
fur growing abilities into the
cell... that was the
achievement of nandofer
ava and rumu too after
their astonishing
unexpected but highly
appreciated merge with the
bee community in a
meadow outside of the

rasip citythe three dancers
went to walk in a nearby
forest where they picked
some wild berries and
mushroomsit was there
they found an injured fox
who was kind of sensing
their extraordinary state of
being.. multispeciesly
merged multilife beings ...
so the fox barked from
under its earthhole hiding...
ava intuitivly new what to
do, she peed in front of the
fox and he did lick her pee
from the groundshe was

sitting beside the fox to hold the palm of her hand over the female fox body with the hand moving automaticly over to the wounded area on her left stomack siderumu and nandofer too were sitting beside ava to place their hands lightly on her shoulders as to support her in transmitting healing energy to the fox.... after several minutes when ava felt great hit and pulsations flowing trough her the

foxes wound what was not deep but widely spread... perhaps she had a fight with an other fox ... ava noticed the wounds closing and she lay her hand on to the space where it was bloody cut just moments ago... she caressed the vixen and felt at this touch her own body taking up the fur and fox skin essence knowledge abilities... nandofer too as well as rumu felt the thank you of the wixen... she and her

global fox tribe have
checked them out for good
and given part of their
knowledge to the human
species via avathe brown
sea algae hairs was an
effort of ascende who was
enjoying on his way from
nacary islands to rasip
some good quality hours of
merging with the brown
large sea algae... also
perma meditated with him
in the brown sea algae
underwater forests at the
shores of nafrecthe ability

to mix human chameleon
tree skin with flower
building build instructions
... came probably together
with the bee upgradethe fig
was a fruit ascende and
perma had found to be
quite sexually stimulating
on the nacary islands to
meditate shapeshift in their
fruity flesh softnessjoho
and mirael as well as
mansulei were quite happy
with their decision to be
multilivers at the evening
of the prototyping phase in

such a researchers family
settingprototype perhaps
not too correct a title for
this timeframe as it was
more like the final phase of
gathering multiple species
cell samples as well as
observing their interactions
the pool was filled with life
of various states of own
intelligence and
selfawarenessbut the
group has yet not asked
the sing groups of cells to
build themselves into a
human like beingit did not

seem to be needed,
everyone was confident
that the interest of the
people who asked to
deposit of 10000 given to
joho s enterprise to have a
meeting arranged with a
somewhat artificially grown
android or golem as one
could call it... a symbiont...
an organic body grown
with a great variety of
human animal and plant
cell materials in urine,
saliva, skin, hair, blood,
sperm female ejaculation

fluids, a artifact being potentially willing to be a companion to the human sponsor, an android talentso the group partied on while all the records got integrated into the data pool what would be given via loudspeakers and light projections into the grow tanks what have been built of clay and glass in the earth huts of south nacrima and the land of naci the humans who were willing to deposit

10000 have studied the terms and are well aware that they could not expect their eventual future companion as they would want them to be, they might have an indepth understanding of the human sponsors whole essence or complete soul spectrumso if they were wishing the companion like a human of the opposite sex athletic and sexually attractive the android talent would perhaps be a

mix of plant features and animals and some other human attributes like instead of boy/girlfriend the human part would be a mother/father type of style or a human wishing rose flower like hairs might get an android growing orchids as skin toppings also how the artificial beings might go on eliminating the jobs the human sponsors performed... no certain route was either programmed nor to be

projected as the android consciousness thanks to its roots in nature of human animals and plants... this newly evolved shapeshifting beings could not be predicted in their possible logics what in itself was an exciting factor who fascinated the human sponsors, to be surprised on the behaviour of an android towards one's own features conditioning's mind and heart patterns joho was now becoming interested

to help provide thought and feeling observations towards the soon to start 10000 grow phasemansulei and him were now questioning the need for an airtight setting... eventually the air borne particles would be effortlessly integrated and used as building blocks by the ursuppe from the rasip poolthe plan was to equip each grow tank with initial rasip pool water of 1 to 10 litres ... the group would

bath again together and ask the pool mind to help dividing itself in 10 000 equal portions of all cell assemblies... or perhaps the 10000 water bottles from glass were totally individual with each bottle containing just this cell types what would be needed in respect of the future interaction with just this human sponsorthis being aided by the informations who why deposited 10000 were also

projected into the pool with
text light projectors so the
pool mind read the contact
request and accordingly
divided itself when one of
the group filled a bottle of
rasip pool water this pool
mind some months later
would decide to inhabit the
placenta of minai and
leumi after they gave birth
to a boy and a girl in the
pool about 8 month after
the 10000 were started to
be grown...mirael... the
setting of the earth hut, if

the android or golem or biont would be grown in a 3 diameter bowl built with clay or glass or any combination of the materials... would have an influence and perhaps be given to the several thousands of uncles watching the cell assembly multiplications in the grow tanks... the uncles might spontaneously be guided to cover the grow tanks with a glass kuppel or filter the air in the hot otherwise

eventually to burn incense
style or and pray be happy
dance sing ... all the
human spectrum might be
more of an important
factor towards influencing
the grow
conditionsimportant would
be a soft handling of the
fluids and great connection
of the uncles with their
inner own self in order that
they really listened to the
collective mind in the earth
hut... kind of fine mesh of
individual goals what are

trying to find their common
smallest understandings of
each other... and build on
top of it a shape and
behaviour pattern of this or
that cell gathering patch
floating on the diluted
rasip pool waterthe mesh
would build itself according
to one the info in the pool
second the info of the
uncles being in the roomso
the growers attention
would be of a contributing
factor to the success of
the biont devellopment

32 the first 300 000 androbionts ...<https://archive.org>

the 100 000 bionts
were quickly deposited for
and each depositing
human started sending in
information about his/her
life , with the intention that
these details about the
eventual future companion
could help the android
symbiont to build itself

according to the future task a companion relationship with this specific human would need to fulfill some sponsors did even moved near to the earth but where this particular biont would be growing so he too could visit the grow room or even apply to grow his/her own symbiotic companion... with applying meaning towards the biont, at a stage in the grow process when the growing cell

assemblies could communicate with their grow helpers uncles sponsors if the biont wanted its sponsor to be also its grow uncle, that was cool, but other bionts decided that there might be some good growing time without too much expectations or wishes to interact... the family of friends researchers were quite busy filling all the 100 000 bottles, visitors and fans of the project were

helping too as well as some of the uncles who were excited to see the mother pool where it all came together it took some weeks of filling bottles and shipping them to south nacerima and the land of nachi where the earth huts and grow bassins were already prepared the many thousand grow uncles or android biont grow supervisors were learning as much as they could

from the recorded history of the rasip appartement plus, mirael and mansulei were now visiting each one of the grow places to make sure that the atmosphere was most beneficial for the growing ascemde, perma, and nilai too were in south namecira to aid the setup of the grow tanks luoi and luoma travelled to nachiland to do the same only mundu, leumi and minai staid in the rasip appartement where they

wanted to experience a wonderfully harmonic birth at this time luemi and minai were around 3 month in their pregnancy the growth of the first wave of android bionts completed itself in about 2 months, with most sponsors coming to the grow hut regularly during the growing and to be there when the growth would be completed as the sponsors were almost all broad minded people who

knew of the whollistic concept around an eventual companionship, nearly all of the first 30000 android bionts agreed into engaging in to a sustainable long term relationship with their sponsors the next phase of android biont growing commenced with the metabolism side products of the freshly built androids, their cell samples and urine and stuff gave the next batch a starter

soup to grow in at the time
when all of the friends
researchers were back in
rasip to witness the birth of
luemi and minai s babies,
all 100 000 previously
wanted to be companions
androids were successfully
grown and found their
human sponsors to be
worthy to engage with in a
world improving
relationship just some
couple of hundreds did not
find a suitable
understanding with their

sponsors in which case
joho returned the 10000
momey deposit back to the
human sponsor and the
androids were either
travelling the earth as
souvereign beings without
fixed relationships to
human beings but
spontaneously helping
here and there to fix
problems some of them
chose to be companions to
joho to help him set up
next growings, some
dozens wanted to be with

the friends research group, also looking forward to their project of growing 200 000 androbionts without money deposits who could engage with any one persons who wanted their help the 30000 huts what had grown successfully each 3 generations of androbionts in the last 6 months, with the grow uncles haven given ownership of hut and grow facilities after the first successfull androbiont

grow the grow supervisors who were mostly students of biology, chemistry and physics who did this work together with their families , were given 3000 money for each successfully grown androbiont an other 5000 was invested by johomirael and mansulei to build the hut, with satellite communication and all the projectors, cameras, pipes, sensor equipment and gadgets for the grow bassins/tank what made

14000 money spent on
each hut growing 3
androbionts bringing in
30000 to joho of the 16000
profit per hut, at 30 000
huts, it gave joho an
overall brutto profit of 480
millions, from that he
donated 50 millions
towards the friends group
project to grow 200000
androbionts for the general
welfare of humanity the
families of the grow
supervising uncles were all
very happy caring and

nurturing the androbionts and most all of them wanted to be part of the next growing phases, especially as mirael and mansulei together with the friends group found it nothing but fair that each grow hut would have an androbiont grown for the purpose to grow next generations of bionts so, with the friends group retreating after the successfull part one grown 100000 bionts and the 50

million already reinvested in long term grow contracts with the supervising families... the grow huts were being built out and additions built onto them, bigger and more grow bassins installed resulting in the doubling of the grow capacity within the next six months around 50000 androbionts were then being instructed to watch about all future growings the friends group was delegating the introduction

processes ... which
androbionts would be
introduced to which
eventual human
companions... totally to the
supervising families who all
shared the friends group
ethos of the androbionts
enabling the overall
reduction and elemination
of work needed to be
performed with the
supervising families soon
finding that the androbionts
wo performed the
caretaking tasks so well

were even better talented to choose the human applicants who would have a chance to apply to become companions for their fellow androbionts in the growing many thousands of humans applied with reasons their androbiont companions to perform environmental clean up tasks and social welfare activities the world human population in general was kind of surprised to see more and

more androbionts moving around independently from their human companions... for example... a human who lived in an area where people threw plastic and metal drink cans carelessly on the floor resulting in the garbage polluting rivers and flowing into the sea to be a danger for marine animals.... such humans came to the growing huts and asked the supervisor androbiont if they might ask androbionts in the

growing if they would fancy
a task to collect this trash
in the streets, recycle the
material, donate the
money from the material
recycling to the poorest
humans in the area ... and
additionally perform
entertaining street standup
comedy shows with what
education could happen
eventually toward the
people possibly changing
their littering habits other
animal welfare concerned
humans would ask

androbionts in the growing
if they could drive around
in a mobile kitchen where
they would give out free of
cost vegan meals to the
poor and everyone who
wanted to try vegan food
again other hundreds of
humans were asking for
androbion companions
who would go around
offering everyone in need
its labour power.... with
100000 androbionts of the
first commercial wave who
also partly did general

welfare activities and were greatly inventive to eliminate their human companion jobs... eliminating them through automation, efficiency improvements, mechanical, biological and physical system upgrades... plus the 50000 of the second wave who supervised the growing and distribution of the other 150000 "free of charge" androids.... there was nearly no corner

of the globe what was not aware of this androbionts going around eliminating the need for work... for good ... as it was witnessed that every human companion did fare very well with the androbionts services... wether this services were benefitting themselves directly or the greater human community in general there was no hostility happening nowhere towards the

androbionts, also aided by their very great abilities to sense their surroundings... what a sight it was for the slum kids who collected the plastic garbage in the streets when an androbiont came to divide itself in hundreds of bee bat butterfly creatures with human hands who did all the collecting ... changing into one big flying manta like creature who could transport hundreds of kilo materials towards the

recycling depots... how proud the children to have a multilives multispecies enabled androbiont helper who would give all the money from the selling of collected trash materials to the children... so... the 300000 androbionts now active 24 hours 365 days... they did not need sleep as they have incorporated a most wonderfull balance of photosynthesis charging both of sun and moonlight as well as parallel to their

outer tasks of performing
needed work or making
processes more efficient...
they were inwards creating
a constant modelling of the
utopian worlds what they
could see to be fitting for
both themselves as well as
humans and animals and
plants...this imagination's
capability was given to the
android gene pool
mostly through Louis's
pioneering work ... plus the
fireglow ability mundu once
learnt when he was

meditating... most of the
androbionts were not
eating food or drinking
water, but were beside
their tasks also clearing
the air flowing through their
lungs from pollutants and
upcycling the rainwater
what touched their
bodies... with all the good
they did so many hours a
day in the outside as well
with their imaginations
inside... their aura was
highly beneficial to
everyone who stayed

some moments near to them as the androbionts became aware of this, they often made visits in hospitals and walked around there, making jokes, holding hands, smiling randomly at people.... at certain times they would change from one animal into another, caressing the sick humans, butterfly winging kissing their cheeks, changing into giant lilies and growing as waterflowers in an

spontaneously formed pool in the bath tubes of the patients sick rooms it was not surprising to joho as well as to the friends research group that each month the interest for androbiont grew double joho interests were not well beyond money making, he did park his 400 millions profit he made from the first 100 000 androbionts... to see what would happen when the friends group would invest

the 50 million to grow the second batch of 200000 androbionts... with them having invested in the 30000 grow huts in south mareica and the land of nicha becoming bigger being able to grow 3 bionts in 2 months... he decided to follow their example and invest 300 million in infrastructure what would allow him to offer 600 000 newly grown andeobionts each two months, 3million and 600 000 bionts within

a year... he was very fond of the decentral approach, how a student and his perhaps not so wealthy family would take care of the growth of a small numbers of androbionts in their own home... perhaps a family with a 300 sqm house or several smaller huts connected, could watch over the growth of 5 androbionts... with the major part of the work being performed by the first androbiont they helped

to grow as the chief supervisor for the following generations so he invested 300 millions into the build of 120 000 family homes with grow facilities for 5 androbionts each, with the families only needing to work watch observe actively the first 2 month, after that initial growth of the future androbiont supervisor, the family would have 200 to 250 sqm of the 300m2 total space to themselves

to do whatever they felt was suiting them, while the androbiont grown under their loving caring eye would itself take charge over the 50 to 100 sq meters where the grow bassins tanks pools were groups of humans doing philanthropic, environmental and social welfare work... were approaching joho with interests to ask hundred thousands of the androbionts if they would aid them in their world

fixing enterprises as joho was now becoming more and more philanthropic himself, he was very happy to be of service to this groups of people doing good deeds... he did not ask them for any money deposit but gently reminded them that the androbionts working with them might go ways and perform actions what were beyond expectation and in best case would eliminate the need for the good

deeds to be performed...

33 androbionts bring abundance

the androbionts did walk around most of the times on their own, doing the work they have agreed with their human companions plus inventing new ways to get rid of this work in a sustainable fashionfor example the androbionts who were cleaning up plastik trash

were pooling money they
had been given when
selling their artisan
produces they
manufactured out of some
unique trash pieces from
this pool they invested into
the fabrication of
biodegradable packaging
material the many
thousands of them
managed to get such big
amounts of money
together that they could
fabricate the bioplastic in
great quantities what was

offered at half of the price
petrol based plastic was
asked for other androbionts
were asked to stay longer
times in the hospitals as
the doctors and nurses
could see major
improvements of the
healing times with patients
who had been visited by
androbionts these hospitals
too donated money to the
androbionts what they
pooled to found their own
healing houses again other
abions did write

hundredthousands of texts
with exact and detailed
rules of combining them in
this or that manner so their
jobs of being a secretary
or case manager in an
office was automated to
more than half ... what
gave many free hours in a
day they spent on further
improving the work by for
example creating little
machines what could do
the physical tasks like
delivering letters or
packages with piles of

paperwork...these
machines were built from
scrap materials and some
essence of themselves like
saliva urine and sweat
what they could produce
when eating more food
and drinking more fluids
they absolutely needed what
was nearly nothing thanks
to their sophisticated
combination of
photosynthesis, fireglow
and light imaginationsthesemachines
were having
displays and wheels

cameras and sometimes
propeller and wings for air
deliveriesthey were a
beautifull mix of upcycled
trash, androbiont life juice
essence, bioplastic of their
own brand... the
androbionts who were
regularly conferencing with
each other sharing sucess
data and agreeing on
future fields of money
investements.. were
accessing each others
data collections to a
degree what previously

was agreed upon with the human companions most of the human beings who were in a constant relationship with their chosen antibiotics did have full confidence that their androbiont friends and companions were using all their gatherings for the greater humanity animal plant harmony on this planetspace exploration was not on the androbionts agenda, they saw that much to be fixed on this

earth and oceans that it
needed full attention...
there were some single
androbionts in relationships
with astroresearchers who
performed some work on
their behalf in the various
belts of atmosphere
thinning around the
globe as the original friends
research group was
observing all this initiatives
inventions efficiency
improvements they felt
relieved and happy like
fathers and mothers

knowing that their children
were healthy and growing
fine into adulthood as they
were watching the two
newborn with their mothers
swimming in the pool,
ascende and perma
started to speak out their
relief thoughts...ascende...
how wonderfull these many
hundred thousands of
anbios are linking together
to create symbiotic
improvements, evolution
wherever they influence
the human

society...perma... yes they
are so highly sharing, it
makes me know that we
were right to continue our
research into multispecies
organic cell
mergings...ascende...
seeing joho investing all his
profits from the first
commercial 100000
anbios, gives me hope that
perhaps not far from now
other investors too might
start growing anbios...
when nilai joins them to
say...perma, perma you

have been so wise in giving your cellmergings with the chameleon as a base to the genepool, this stron link with the chameleon allows the anbios to fit in perfectly by understanding the sourrounding in great deatails in order to create a pattern on their outer body shape what would just meet the expectation or the desire of the surrounding on what was pleasant ... luoi... i think

that the imagination drive
too does its share of fitting
in respectively colouring the
aura in a colour
combination intervall pulse
what has healing
capabilities... perma... yes
luoi, the imagination and
loving towards all beings,
that are strong contributors
for the healing power of
the anbios... mundu
joyning in... and what
about the lava i
incorporated in awahi...
nobody speaks about that

much these days when we see antibiotics eating to make machines ... what about the great goal of getting unindustrial and stop producing so much...luoma now helping her brother...ya mundu, it looks quite a bit like the system gets lighter and less resources consuming, but we have not seen yet the radical changes one could hope for...ascende.... like for example the bioplastic factories and petrol plastic

industry both stop
producing because the
human beings spend most
of their time in nature
using very little food ... the
worldwide mass
productions being replaced
by human and anbio
handicrafted few items
what a human being could
want to use... luemi and
minai left the rasip pool
with their 1 month old
babiesthe rasip pool was
inhabitated by two placenta
based lifeforms... super

placenta enablers ...
suplenas... what were like
spielkameraden collueges
for the two babies....
minai... oh luemi, how well
we understand our babies
how well the suplenas play
with them, thank you from
the bottom of my heart
that we came together
here to the rasip pool with
leaving awahi... luemi... do
not worry, we will fly soon
to awahi or nacaries
islands or to ecgre or
wherever we can be near

to natural wildlife, but for the moment, i believe are the suplanas one of the best transforming enabling friends for our two little ones... perma... mmh girls i think you shall not take the rasip pool not too long for your exclusive use as there are other human beings who are waiting to visit the rasip pool... ascende... but perma, they can build their own pools now, with all the anbios now having access on

microscopic camera
recordings of all the cell
evolution via mergings
all we know in our cells all
the anbios have access
too as they have an even
better higher networked
internal organisation
structure, their anbios
cloud of data is probably
xtimes mightier and richer
as what we 13 human
enhanced individuals have
the possibility to sub or
super counciousnessly be
registered----ascende s

argument were being agreed upon and joho too was confirming that the androbionts who worked with him on equipping 120 000 new earth built grow huts... the androbionts could grow easily next generations with their own urine and salivaso then the visitors who previously were coming once a week or once a month to be upgraded, just shared a bath with their androbiont companions or kissed with

tongues or drank their
urine ... soaked their skin
with urine of the ever
evolving androbiontsnot
long after was a fast
growing community finding
themselves to evolve
quickly towards the same
level of multilives
multispecies cell mergings
as the androbionts who
shared their essences with
humansthe rasip
appartement became more
of a museum where once
a month someone wanted

to see the
superplacentaenablers and
wanted an upgrade with
themmmmmhhh... or it could
have been the other way
round, more and more
visitors wanted to see and
feel the embrace trough a
suplanabler instead of
drinking their androbiont
companions urinewhatever
way, there were now
hundred thousands of
human beings who
followed the androbionts
and asked respectfully for

some drops of androbiont essence, when they felt upgraded enough, they joined into the good work of eliminating tasks by enhancing the efficiencies of structural processes while joho could provide 3 and a half million new grown androbionts a year, the androbionts itself did share their essences to the extent where in every year several hundred humans could upgrade from one androbionts

urineit did take around 5 years till half of humanity was evolved to the same height as the androbionts of the first generation, with an other fourth part staying up to date with the latest androbiont operation systems ... and one fourth of humanity refused completely to get upgraded but wanted to stay purely human5 years after minai and luemi gave birth to the babies in the rasip pool, the problems of the world

were solved, humanity had
built themselves thanks to
the androbionts
improvements a liberal
society what allowed
anyone to travel anywhere
stay how long it felt good
for the local community
and the travellers,
everyone could consume
how much or how little of
anything, everyone had
access to the local
reresources and the local
communities would care
for each others fair share

of sustainably harvested
fruits of nature ascende
perma and nilai were living
still part of the time in the
rasip appartement, partly
in the nacary islands with
flying also to the north sea
and the frica continents
shores as dovd feather
clad butterfly winged
bats... mundu was
experimenting with his
body being a huge flying
disc like a frisbee of 10
diameter with leumi and
minai and the 5 year young

girl and boy playing beside him forming all kind of geometric shapes from their bodies---the androbionts themselves did also pool money to grow more androbionts themselves, ones who were not introduced to human companionships but could commit themselves to any task they found fitting thanks to this crowdfunding approach what lay deep in the androbionts behaviour

mode, many human beings who had no house and did not own any land before the androbionts came, were now either growers of androbionts with actually not doing any required watching or observing as the android symbionts themselves did thr uncle supervision thingor they got a life sustaining ship as home what could fly in air and vakuum space as well as under watermany human beings chose the

ships, kind of a third of humanity was now on the move in the man another third was staying in their traditional rented appartements with their androbionts companions securing their incomes and the third part of humanity being a bit shy to let the androbiont change their lives to greater extent the changes in the world were great and lasting, the androbionts were accepted by a majority of the society

as welcome agents for
improvements

**34 a does not know
exactly how to
become the apple
instead of eating it**

luoi and minai talked
about the command
structures in the grow
processes of the symbiont
androids...luoi... for me,
the beauty lies in the
growing processes being
guided by many kind of

independent sources and from multiple sides... and the being what grows itself is one of the guiding forces... it seems that traditional master-slave or client-server relationships are not fitting here...minai... this is the one thing what gives me most hope for my child that it will grow up in an open environment what welcomes everyones unique participation...luoi... as we are now observing a

global connection between the active androbionts, it shows us that there is no central leadership of one or a few androbionts over the others.....minai... i am so very happy for this, i would not want my child to be a puppet of any group, even if it is to heal and clean and improve something, it is very important that each participant of a group has the organisational freedom to chose from several

possible activities what
could help furthering the
group goals ... and ... in
the ideal case... can create
unique contributions what
are appreciated exactly
because of this
uniqueness...luoi... the
androbionts as well as the
two suplenas we are
witnessing are constantly
adapting their abilities
towards the natural rich
heritage of mother earth
and combining these
abilities following the needs

or preferences of the
momentary situation...
minai... possible or highly
probable that every
individual androbiont as
well as the suplenas and
upgraded humans like us
having multicellular
mergings experienced and
integrated in our core
operating system... that all
of us have a high degree
of autonomy... luoi...
means that one androbiont
or suplena or multicellular
human can do something

completely unique in
response to the harmonic
or disharmonic
circumstances, also in
response to other change
enabled beings...minai... if
i look at myself and my
child and it with the
suplenas ... we are
changing our
shapecombinations and
featuremix costumes in a
fashion what seems to
grow in creative patterns
the more we get new
species to join the joyfull

circle of multispecies
multilifers... minai...and we
have not really looked at
what the animals and
plants take with from our
human heritage after we
merge with their donorcells
... possibly it is the mental
emotional what gets
involved with the animals
and plants and
elements...luoi...when i
was a treelike being for
weeks in the nogco
bassin... i somehow felt
being content as a tree to

be rooted into mother
earth... would not wanted
to walk around like a
human or fly like a
butterfly... but then it might
have been me idealizing
the vertical cosmic
antenna function of a tree
... for sure i can not say
anyting except that i was
extremly gratefull to sink
into the depths ot the tree
counciousness for some
brief moments of my life ...
sometimes i see myself
changing into tree again

for minutes at the time to
revisit this cosmic
verticality, i could not even
say if the trees would be
guided by a forest oversoul
or community structure ...
minai... how can we
understand the freedom of
a deciding mechanism
when not on the creativity
of possible choice shapes
the structure of people
allows its members... if my
child would theoreticly
overboard itself once, i can
count on an androbiont or

suplena or evolved human
being to be in his vicinity to
help my child find a
decision what is beneficial
for itself and all...
dictatorship where one
individual cheats another
individual, where one takes
another one's fair share of
available resources...
seems not to be furthered
by the highly autonomous
pack swarm cloud we
changelings are
demonstrating in these
days that is when ascende

and mirael come into the discussion... ascende asks luoi what she thinks of the several sex practices in relation to the dictatorship dominance and submission theme... while minai and mirael are listening too, wondering if this would stay with words or if there would be some sexy exercising , minai was cool towards both possibilities, luemi was flying on the countryside with the two children the author has not

yet read their names , as it
would involve reading back
in the novel, what again
would perhaps feel like
worka is a strong believer
in a military free world and
that utopia is possible with
the least imaginable
amount of violence happen
in reality....luoi ... look
ascende, you are an anal
fetishist, you like being
visited into your rectum as
well as to let your penis
soak up another beings
rectal microbacterial

fauna... difficult to put that
in a box of dominant or
submissive... me too like to
put my finger in your anus
and play softly with your
nerve endings at your anus
rim... and i like to be
rubbed to, my asshole be
licked and penetrated in a
sloe but deep
movement.... ascende... i
think that i lean more into
pushing harder with
receiving softer anal
enterings ... but i would like
to balance that out by stop

pushing so hard and listen better to the rhythm of my partner what signals very clearly... a movement towards the intruding one means yes continue in this manner, a movement away means please slower finerman and mirael were handling each others bodies at this moment in the most unspeakable or unimaginable or the author feels unable of describing various animal plant and human physical body

combinations what lick
squeeze enter each others
body openings with all kind
of sized penises fingers
tonguesoh that is typical
for a, when it comes to
core moments of
philosophical debates...
distract with erotic as in
there is a certain tolerance
for violent behaviour... or
the author wants to talk
about his personal sexual
fantasies.. mmmhh ...
anyway, the point here
being...luoi saves herself

from the lusty feelings
rising up in her while
analyzing her and
ascendes anal
meetings...she says...the
android symbionts will not
succumb to one person,
nor do the suplenas in the
pool do what minai or
luemi do , and i did see in
our basicly human friends
research group that we
were mostly supporting
each othes wishes for self
fullfillment and the
common goals were

agreed upon with
thoughtful prior exchange
of several aspects to the
decision.....mirael ... who
just some seconds ago
had ejaculated his semen
into the thankfully receiving
human mouth of minai...
came into the
discussion...luoi, you are a
good kisser, how we could
possibly describe our
tongues dancing with each
other, our mouths sucking
eating each others mouth
bacterias and saliva...

luoi... how rough you say
that indicates you are
emotionally detached
some way along your
lifeline... we might have
some more kissing time
later today, yes ?... with
mirael shining out of his
face like a sun at rise...
yes my dear i would very
much like to learn kissing
with you againminai was
meanwhile sucking
ascendes penis, he
massaged her head with
soft fingers... pulled her

hair when he asked her to
press harder with her
cheeks and tongue
towards his erected
pillarlucioi seeing this, she
gives it up to continue the
research on how
impossible dictatorship
military and systeminbuilt
regular planned use of
violence as punishment
and or robbing another
group of its fair share on
the global ressources...
her sexual lust was asking
for its time to roar through

her, storm up through her
from the middle of again
towards the fellow sex
partner and down to the
mother again... but the
sexual bliss travels also
through fellow beings
horizontally... sideways sex
blessings as well as up to
the sky...luoi kissed
michael on his belly first,
then on his mouth,
engaging in a fingering
each others genitals, the
two were petting long time
....ascende now was lying

under minai to lick her
pussy lika a cat licks
milk...half an hour later the
four have satisfied their
appetite for each others
juices and come back to
the overviewing of the
evolution since perma
moved into the rasip
appartement 4 years
ago.... humanity has
successfully mastered the
transit from a human
dominated globe towards
an all species appreciating
each others lifes to let live

togetherness... since some thousands of human beings have journeyed into the multicellular mergings with other species and hundred thousands of androbionts grew up being a fine combination of human and animal and plant genes with the potential to merge with even the elements specific wisdom essences... there are still billions of human beings who do not want or do not believe it to be

possible... to think that the
hunger could one day
cease to be ... or.. to
believe that air transported
pollen might be enough
substance to nourish the
body of a human being...
or that the imagination...
the memories what one
had of sunny moments in
ones life ... would one day
possibly a main food... that
human skin would be able
to take on photosynthesis
abilities... this story is
about ending the hunger in

the creation itself, may all
beings be able to feel... if
they want to...nurtured and
loved in all times and
spaces, may pleasant
comfort allow relaxed
optimistic bodymindsoul
flowthe research what has
been portayed in the
approximatly 42 000 words
so far in this novel... is not
an exact one or a
repeatable, there are no
fixed patterns but
eventually returning
similarities in the wheel of

transformation... or is it a triangle or modulation, a quadratic change of angles on how fast how high how slow and low we need to do what pull or push, give and receive at what conditions one could wish that there would be a potentiality for such a gentle cell merging to help humanity one day to move away of the techniques what force the separate cell typed into each other...
geneticly modification of

organism.... but then, the author a does not really know how this could possibly happen in greatest detail... but.... magic ?!... there is room for the not yet form u lated... perhaps it needs to be said, perhaps it would be better to leave it up to chance.... wishcraft that wording here is a bit, some times more some times less... the author with his various points of narration, strategic or subcounciously

created figures in the story.... bla and bla.... one could wish that all creatures and species would be compatible to each other, without cut and paste, without knives and forks, that our anusses might one day smell of roses and the tiniest bit of highly welltransformed shit comes to bless the community... we want to cherish each other without death being the bridge... we want to celebrate each

others continuation of life
and not weap about the
surprisingly necessicity of
killing each other for
survival... this author
believes in a state of
existance with no pain
needed to be inflicted on
anyone, but he as well as
his protagonists can only
guess how this vague
dream bridge could look
like... how exactly one
could be ... the very apple
one desires to eat

35 mansulei looks back and forwards

35 mansulei was writing a somewhat all-encompassing overview on the friends research of the last 5 years and johos successful investments culminating in a million strong decentrally connected global community of android symbionts and multilives

human upgraded beings she
did start with a
philosophical introduction
to whom it may
concern when i, mansulei of
the friends research group,
write this, it is my very own
personal account of how i
see look at the happenings
of the five last
years ascende and perma
started to collect cell
materials from animal and
plant species with the
overguiding motto or ethic
preference, that what they

were humbly asking for
was skin cells from animals
and plant material what
was given in joy, not taken
with intention, but given to
them in a way of being
blessed ... the cells being
offerings toward the goal
of humanity grow further
into responsibility,
sustainability towards
stepping much lighter on
planet earthpermas
meditation at the
chameleon place ... when
she moved from her

nature hut in the nacary
islands to the rasip
appartement ... she did so
to be near ascende, to
create a stronger aura of
two people instead of
being alone... also the
artificial environment of the
rasip place may have
helped them to
concentrate onto their wish
the cells they got donated
with might grow together in
an selfguided way
somehow, without cutting
dissolving remixing the

cells in a traditional genetic manipulation fashion but to create an environment, although artificial with petri dishes and bioreactors ... still it was an environment what allowed permas skin cells to merge with the chameleon in love given cells... and she could then successfully integrate them into her working organism, with ascende following her path himself too succeeding to take up photosynthesis capability

through his skin cells having merged in the petridishes nurtured by microalgae from the bioreactors and psilocibin mushrooms as well as cannabis flowers grown inside the appartements aeroponics and fughi grow chambersthey took this first huge step in a weeks time, what in itself is posing the question to me if possibly their enterprise was being helped by ancient or future human

like pathways... were there already human beings having successfully achieved an upgrade of their bodies towards multispecies cells merging in symbiotic smooth and gentle growing into each other ? were they travelling the earth at that very moment when perma did her first bath with the merged cells... was this selfrealize being or multiple of them watching over the two friends all the time...

possibly back from the
future to direct their
supportive thoughts and
emotions ... and or was it
the collective cloud of later
android symbionts what
went back in time to be
there in the appartement...
the cloud of experiences,
real happenings of a being
growing itself together
from several types races
species cells... i do like to
think of that being one
possibility... so i give
thanks forward and

backwards in time to all
creation, to all individual
beings who have helped
this cause with their
supporting conscious
support how do two cell
types grow into each other
? without being cut open or
injected into each other,
sequenced and sliced into
fragments but simply given
into the same petri dish
with a tiny spoon added
microalgae and
psychoactive plant
essences... was it the act

itself of them gently being
given into this round little
bassin where they both
could take their own time
to get to know each
other... these hours and
days when ascende and
perma looked into the
petridishes hoping to
witness with their naked
eyes and the microscopic
cameras.. a symbiosis of
the two cell types... was
their thoughts and
emotions motivating the
cells, and was a much

stronger... cloud of it
already happened for the
good of the whole planet...
in the rasip appartement
flowing into the bioreactors
funghi chambers
aeroponics and petri
dishes as well as into
perma and ascende...
eventually all of the three
contributing forces were
even deeper founded and
helped by the planetary
cloud of potential, maybe
agai gaia and the
ascended beings, the

angels and elemental
godsimilar forces were
rejoycing at this moment
when the mergings
happened...maybe the
authority is none of all that,
maybe all the names and
concepts of angels, god
and godesse, ascended
beings... are distracting me
from what it is... it is the
road to a fine exchange of
information, instead of
eating the apple the
multilifes multispecies
cellfused human beings

and the symbiotic
symbiotic ? androids
golems partly artificial
beings could be that very
apple in their own now
apple fruit flesh and skin
and apple seeds... instead
of building a shelter from
earth against cold weather
and strong winds...
everyone of the friends
researchers could now
burn or consume tiny
amounts of flower pollen
what would get them
through the night, or

perhaps tiny bits of fruits
ingested what helped them
sustain their inner fire glow
what the friends research
group got donated some
months into the
prototyping phase when
joho already had asked me
and mirael to translate the
friends research material
what was open source all
along the way, translate
this knowledge gathered in
experiments towards
android lifeforms whom
human beings could ask to

be their companions as
written just some lines
above, there were some
months in between of
perma s chameleon merge
and mundu fireglow ability
aquiringi am drifting here
extra towards the
underlying core things...
what is the core motivation
of a being what has left its
single species ness behind
to seek mergings
symbiosis mutual sharing
of genetic heritage with all
possible reachable forms

of life, forms and shapes
of elemental compositions,
looking to become one with
the elements... to me it
seems to be in great deep
and high balances
equilibrium with all
relatives, to be in an
agreement coming from
sharing experiences
understanding of each
others uniqueness.... an
agreement what would
allow one to be exactly
what one wishes to be in
that moment on either

body and or thinking and
or feeling level of
existence... this
satisfaction to have
reached home, to have
arrived at being one with
all, would result or lead to
the state of abundance, an
satisfaction what would not
give way to a hunger or
thirst but if one would
follow to satisfy ones levels
of existence with this
amount of life joy ... in
gentleness, in respectfull
humblity... could one day

no tree need to grow
apples anymore as there
would be no one wishing to
eat them, neither human
nor bird ? could we live on
a planet where the plants
and evolved humans as
well as multicellular
animals would flower and
not wither, but constantly
sending each other pollen
with our very own spores
of life style

36 a wild guess

36 these are the questions what do concern my core being a lot questions what are pathing forward or inward towards a state of existance who would be only minimally consuming of what is given by fellow plants and animals... eventually what nilai experienced when the bats trusted her and flew so

near to her body that
some of their saliva
dropped on her
skin perhaps the bat saliva
was at this time for Nilai
already nurturing like food,
as she was already with
ascende and permas
chameleon human
photosynthesis capabilities
thanks to her baths in the
rasip pools... and did she
took up the butterfly
essence from their wings
possibly what would be
some excellent fine

information if one is ready at this moment to receive the bounty of a fellow planetary species and as always the thought comes up what possibly did the animals did take with... we have not yet looked into that enough to confirm the assumption that they would take with if not human qualities but the abilities of one's cells merging with cells of another fellow animal and plant species if they

profited from that possible
blueprint of how species
different cells can grow
into each other most
gentle smooth gradually, it
would not mean that they
would feel the need to
actually translate this
access to cosmic paths
into their own personal or
swarm flock species
common behaviour
assume ... writes mansulei
in his memoirs and
viewback ...that there are
a number of animals and

plant slowly getting more intimate with this possibility... but then, it seems to be superstitious and too arrogant to believe that a s fantasy writing could describe a real animal and plant future evolution... i as mansulei can write how i understand the symbiotic androids and us multilives human as well as the sublenas... not too much i really understand about the deeper rules of how cells

grow into each other... but my research is observing and documenting what i see and experience in a world or a fantastic realm where a the author could arrive in 10-50 years... as mansulei knew from ascende who is one of the authors main imposing projecting wishes for himself... but then, also my actions and the one of all the other 12 researcher friends is appealing to the author... in fact as he

named himself in an
artistic name
androgynous... he very
much liked to wish for
himself a sexchange but
one without scalpels and
needle and thread... a
sexchange what grew from
inside and has the wish
power to reform ones
genitalia hips breasts and
motherly organs...
ascende told me once how
he was in an other
storyline also together with
perma bathing in wildlife

pools growing multispecies
with lots of urine and
cannabis flowers psilocybin
mushrooms...he was then
trying to grow himself into
a female human to the
core but enhanced with the
same qualities we
experience in this rasip
appartement ah yes,
mansulei that is me writing
this ... the question... is
psilocybin and thc really
necessary or even
helpfull... from our
standpoint now in the

future, yes, very helpfull
but not necessary
probably any plant essence
or animal droppings might
grow together in an non
psychadelic growth
environment, one would
hope so as not all
halluzinogenics grew
everywhere on the planet...
again a wild guess looking
from the reality of the
authors view of the world
in the past from me
mansulei writing this review
of our friends research 5

years what possibly... ah
that is too much of a
sentence come on ...
sorry... the thing is that
this author does not do his
learning quite seriously so
that most of the future
past uncertainties could be
described as separate
possible or really parallelly
occurring actual future
timelines.... like... the
author could write with
certainty deeper and fuller
descriptions of the scenes
when two species marry

somehow... there might be a certain training factor here coming into play as the author likes many different paths outlined in a sketch... so this writing of 2014, kind of 60 000 words in 12 months on the ascende fantasy theme are a sketch, a writing exercise for an other book or fourth storyline where a or i or the author could bath into richer descriptions and give the reader some quality guided

meditation like dream
imagination background

**explanatory ... why
this line of writing
and are there
others**

i am longing to become
one with all the genetic
richness this planet has
cultivated since millions of
years, i tried to fantasize
how that practically could
happen in a soft, non

surgical way ... in a series
of fantastic texts i wrote
this summer

<https://archive.org/detail>

...

where the protagonists
spend some very intense
time in nature and search
for intimate connections
with the living ... both
material and spiritual ... as
with the temperatures
getting colder i began to

shift my story focus on the inside ...with

<https://archive.org/detail>

the merging of human and animal and plant cells seem already to demand less intensity ... with both story lines setting the focus on the love and the joy, the human intention wanting to merge with all fellow life ... both storylines have explicit eroticism in it, i ask myself if it is of a

chauvinist sort as i am not
all too well grown out of my
male sex drive patterns ...
if that comes over like that,
i ask the cultivated evolved
reader to forgive this
deficiency, with having a
compassionate eye onto
the vital life embracing
energy the lusty moments
can bring when one faces
the sometimes quite
gigantic seeming task of
becoming really in the
material ... one with all
what is ... in 2007 i have

managed to write a text
what is actually the first of
the ascende line ...

<https://archive.org/detail>

... in this text what has
no erotic language at all
but mostly focus on
philosophy ... one of the
main pillars is the concept
that in a possible near
term future, humanity does
give back great parts of
the land what we now
occupate for agriculture ...

give it back to wildlife ...
and we would retreat our
food growing via
aeroponics, bioreactors
etc. inside our living
rooms, flying ships,
skyscrapers... i was
studying the idea of
breatheranism, nurturing
oneself from light ... and
as being raised in the
christian belief ... i do carry
in me the strong wish that
it might be possible for the
lion to lie beside the lamb
without having to harm it ...

so i wrote about it in that vision where we humans retreat and give lots of space to wildlife ... with additionally trying to support the animal predators with vegan protein ... looking back today when i myself am exercising myself in veganism ... i still believe that the elegance and strenght, the vitality and quickness of the predator could somehow be transformed from the hunt

scenario ... into what ? ... i believe that the human being has a great influence with his behaviour on the fellow animal species, most of all because of our machines and weapons ... sad ... it is ... we encage, bind, imprison so many of our fellow animals ... constantly but to return to what we could do ... let us assume we could share our wealth, the fruits of both mother nature and our technological progress

... between all human
beings ... and with that
probably end stealing,
robbing, cheating ... killing
each other in wars based
on quarrels about
materials ... this our
compassionate sharing
between ourselves would
eventually also positively
influence the animal
species what are now
released as nobody really
wants anymore to eat
another brothersister
animal ... eventually the

human peace in the
material square could
ripple out onto the animal
inter species relations ...
but this is all theoretical ...

i personally tend
towards technology being
the bed in where human
animal and plants could
eventually find more
wholistic interconnections
and grow higher deeper
fuller nearer to the one ...
but then also ... it could
well be possible totally
without tech ... just the

land, the water, the air, the
life forms touching each
other in multiple spheres,
dimensions, parallel
realities ... perhaps it is not
a question of wether with
machines or without,
wether with implants or
prosthetics, with natural
medicine/drugs or
synthetic substances ...
perhaps one important
question could be ... how
do i imagine my very own
personal journey to the
bigger me, my future self

... how can i channel my
future self
